Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.
For more information, please visit **www.kennametal.com/carbiderecycling.**

** Alternative chamfering solutions are available in combination with SEFAS™ or BF; see page I1.
Please use this table for orientation purposes only. Detailed information on available products (inserts, toolholders, etc.) can be found on the indicated pages of this catalogue.

KenTIP™ Modular Drill System

Primary Application

The KenTIP Modular Drill System offers performance levels commonly achieved with solid carbide drills. The patented locking system enables inserts to be changed inside the machine tool. Use KenTIP in steel, cast iron, ductile iron, and stainless steel applications.

KenTIP Modular Drills are available up to diameter 27,99mm (1.1020"). With the new diameter extensions of KSEM PLUS™ down to 28mm, we offer modular drilling solutions with a front clamping mechanism from diameter 8–70mm. The user can change the drilling inserts in the machine without taking the body off, saving setup time and manufacturing costs.

Introducing the all new KenTIP inserts made of KCP15™ grade especially developed to provide longer tool life for steel applications.

Features and Benefits

Improved Interface

- Stronger pocket seats on all inserts and bodies.
- Longer tip and body life in unstable conditions, especially side loads.
- All new tips and bodies are interchangeable with previous versions.

HP Drill-Point Design

- Low thrust prevents workpiece flexing.
- Excellent centring capabilities.
- **NEW** HPC(M) for cast iron applications.
- **NEW** HPL(M) for stainless steel applications.

Easy Insert Change

- Locking method requires no screws or clamps.
- Insert blades can be changed with a simple provided tool and does not require drill body removal from the machine or holder.

Disposable

- No reconditioning costs.
- Consistent performance.
- Eliminates number of tools waiting for reconditioning, providing significant cost savings.

Tailored Grades and Geometries

- KCP15 grade has a new PVD coating enabling longer tool life in all steel applications.
- KC7320™ grade has an AlTiN-based PVD coating for the demands of drilling stainless steels.
- KC7410™ grade contains multiple layers of PVD coating offering outstanding wear resistance for the drilling of cast irons. The geometry prevents breakout when drilling through holes.
  - KTIP_HPC inserts are designed for grey cast and low-strength ductile irons (K1).
  - KTIP_HPCL_ inserts are ideal for low- and medium-strength CGI and ductile irons and high-strength ductile and austempered ductile iron (K2, K3).

Drill Body Portfolio

- Standard 3, 5, and 8 x D tool bodies with round and flanged shank available, inch and metric.
- NEW! Standard 1,5 x D bodies available, especially for piloting operations.
- For the latest product list, please refer to the e-catalogue at www.kennametal.com.

Customisation

- Intermediate diameters available as semi-standards.
- Close tolerance tips available for precision holes.
- Chamfering insert pockets available.
- Multiple steps possible.

KenTIP Chamfering Insert

- Drilling and chamfering in one operation.
- No height adjustment required.
- Low setup time.
- Use standard inserts.
- Tool bodies available as engineered solutions.

Mounting the KenTIP Inserts

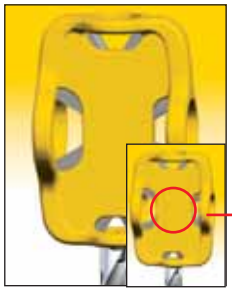
1) Fix drill holder on arbor. For insert exchange, fix arbor on the machine or set on tool presetter.

2) Remove dust using air blast.

3) Put insert into drill holder (use gloves to protect your hands).

4) Turn lightly in a clockwise direction (use gloves to protect your hands).

5) Set the wrench properly.



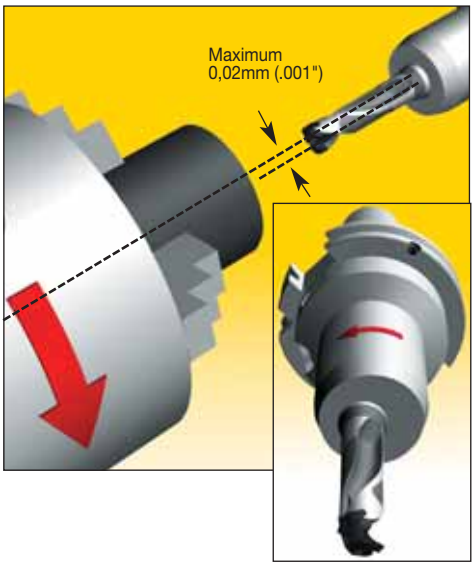
6) Make sure the wrench fits with the insert slot (check size and alignment of wrench and insert slots to avoid injury).

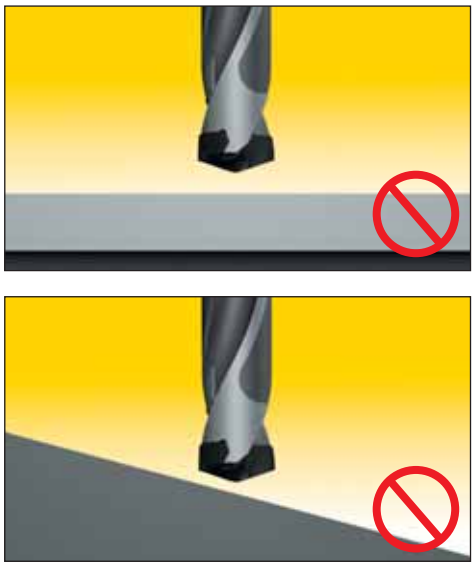
7) Slowly turn the wrench in a clockwise direction.

8) Complete.

Cooling the KenTIP Drill

Note





KSEM™ Modular Drill System

Primary Application

The KSEM Modular Drill System offers extended length and drilling diameters beyond the KenTIP™ Modular Drill System. Hole depths of 10 x D up to 40mm (1.575") drilling diameter are standard. Various grades are available for your most demanding applications. The KSEM Modular Drill System covers a diameter range from 12,5–40mm (.4921–1.5748").

Features and Benefits

HP Drill-Point Design

- Low thrust prevents workpiece flexing.
- Excellent centring capabilities.
- HP(M) and HPG(M) for all steel applications.
- **NEW** HPC(M) for cast iron applications.
- **NEW** HPL(M) for stainless steel.

Easy Insert Change

- Robust pocket design requires only a simple wrench for blade removal.
- Selection of grades/geometries available.

Strength of Design

- Accelerated feed rates offer increased productivity.
- Four-wall pocket provides insert stability.
- All geometries except HPL(M) can be reconditioned by Kennametal for added economy.
- Through coolant standard for improved tool life, hole finish, and chip removal.

Tailored Grades and Geometries

- KC7315™ grade is a TiAlN-based PVD grade offering superior performance in all steel applications.
- KC7320™ grade has an AlTiN-based PVD coating developed for the demands of drilling stainless steels.
- KC7410™ grade contains multiple layers of PVD coating offering superior wear resistance when drilling cast irons. The geometry prevents breakout when drilling through holes.
  - KTIP_HPC inserts are designed for grey cast and low-strength ductile irons (K1).
  - KTIP_HPCCL_ inserts are ideal for low- and medium-strength CGI and ductile irons and high-strength ductile and austempered ductile iron (K2, K3).
  - For KSEM_HPCCL_ line items, please refer to the e-catalogue at www.kennametal.com.

Customisation

- Intermediate diameters available as semi-standards.
- Chamfering insert pockets available.
- Multiple steps possible.

grade	geometry	composition and application	ISO class
KC7320	HPL (M)	PVD high Al content TiAlN-coated universal fine-grain grade: • Excellent oxidation stability and adjusted toughness. • High level of wear resistance. • Used for modular drilling of austenitic stainless steel.	M20
KC7410	HPC (M)	PVD high multilayer AlCr-based coating over fine-grain carbide: • Newly developed unique coating. • Extraordinary wear resistance in drilling of cast iron materials. • High hot hardness enables elevated speeds.	K15
KC7135	PC (M)	PVD-TiCN-TiN-coated carbide: • Highly wear-resistant grade. • For universal application in steel, stainless steel, and irons. • Specifically used for KSEM PCM precentring inserts.	P40 K35
KC7315	HPG (M)	PVD-TiAlN-coated universal fine-grain grade: • Highest level of wear resistance for higher cutting speeds. • More efficient than PVD-TiN grades. • First choice for alloyed and high-alloy steel as well as cast iron. • Latest geometry for low thrust and highest speed and feed rates; up to 7 x D no precentring required.	K20 M15 P30
KC7235	HP (M)	PVD-TiAlN-coated fine-grain carbide: • Tough substrate. • Highly wear-resistant coating. • Suitable for machining steel even in difficult conditions.	K35 M30 P40
KC7315	 HP (M)	PVD-TiAlN-coated universal fine-grain grade: • Highest level of wear resistance for higher cutting speeds. • More efficient than PVD-TiN grades. • First choice for alloyed and high-alloy steel as well as cast iron. • Latest geometry for low thrust and highest speed and feed rates; up to 7 x D no precentring required.	K20 M15 P30

KSEM Chamfering Solutions

- Drilling and chamfering in one operation.
- No height adjustment required.
- Low setup time.
- Use standard inserts.
- Tool bodies available as standard.

- Use any KSEM insert blade diameter within the designated seat size.
- Drill shipped with central lock screw, insert screw, and wrenches.
- Order insert blades separately; see pages H16–H19.
- Order TPGX chamfering insert separately; see page H27.

- The NEW chamfering rings for KSEM are available in a diameter range of 12,5–32mm.
- The KSEM SEF ring is double-edged, features a more rigid design to withstand high feed rates, and reduces time-consuming deburring and small chamfer operations.
- Reduce machining time — combine drilling and chamfering in one operation.
- Short-term availability — standard tooling off-the-shelf — KSEM body and inserts, SEF ring, and SEFAS™ inserts.
- Flexibility — adjustable drilling depth.
- For speed and feed recommendations, please refer to catalogue recommendations based on geometry and tool body length of the carrying KSEM tool.
- Small chamfers up to 1mm do not need further feed reduction.
- At deeper chamfers, a feed rate reduction of 50% is highly recommended to avoid vibrations and movement of the ring during operation.
- For inserts, please refer to SEFAS System on page I23, insert 3.42807R021.

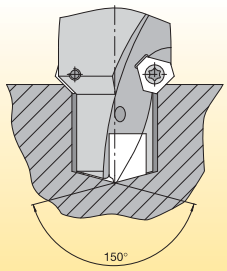
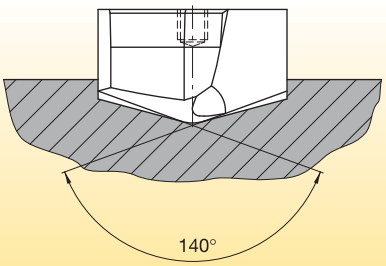
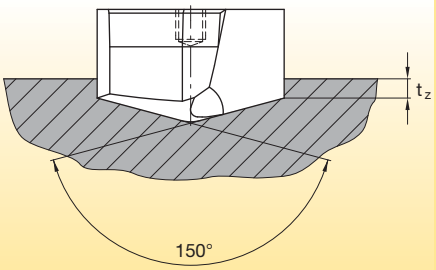
NOTE: Order inserts separately; see the SEFAS System, page I23, insert 3.42807R021.



Centring using PCM inserts



HPM inserts of the follower drill



Precentring with FAS centring tool

Why is precentring necessary?

- Generally speaking, for drilling depths 5x the nominal diameter and above (5 x D).
- In unstable conditions (workpiece and tool clamping).

Why precentre using PCM inserts?

- Soft-cut entry of follower drill due to 150° point angle of the PCM insert.
- No extension of the follower drill in the entry area.
- No breaks at the cutting edges.

What happens if...

...a centre cannot be used for technical reasons?

- Spot drill with normal insert at normal and reduced cutting data (approximately 1/2 vc and approximately 1/2 vf), then continue drilling with regular cutting data without lifting off/stopping.

...there is no suitable PCM cutting insert in the standard range (ø)?

- Manufacture to order using PCM geometry and k7 tolerance.
  or
- Centre using the same cutter insert as for the follower drill but without the cutting edges penetrating the workpiece (spot drill ø approximately 90% of drill ø D1).

...only one tool body is required?

- Enter the workpiece with 50% feed until the cutting edges and the heels have penetrated the hole, then continue drilling without lifting off/stopping using regular cutting data.

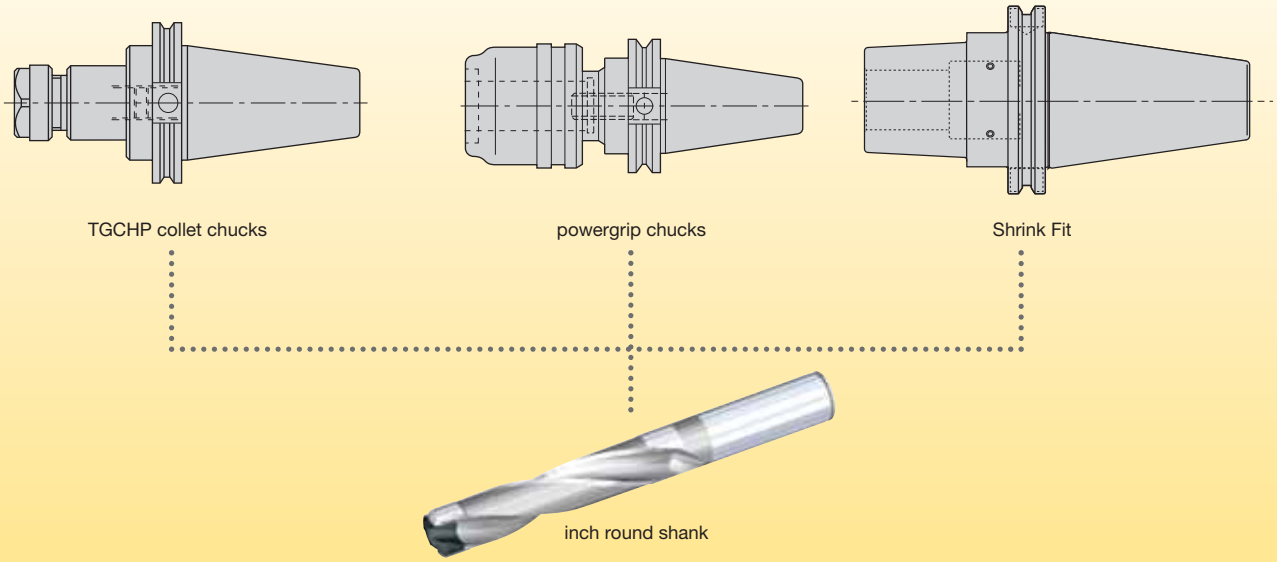
Other problems

Short hole drilling with precentring support tool?

- Up to 1x nominal diameter (1 x D) possible.

Rotating Applications

KSEM inch drills with round shanks (no flats) are specifically designed for rotating applications where the drill rotates and the workpiece remains stationary. The shank to drill-point location of these drills is held to an extremely close tolerance. To maintain accuracy, and get maximum performance from the KSEM drill, use only the approved toolholding method shown below.



Inch Drill Bodies with Flange

KSEM inch drills with a flange can be used in rotating applications where the drill rotates and the workpiece remains stationary. To maintain accuracy and get maximum performance from the drill, use only the approved toolholding method shown here.

Metric Drill Bodies with a 2° Whistle Notch™

KSEM metric drills come equipped with 2° Whistle Notch shanks. The 20mm, 25mm, and 32mm diameter shanks use WN adaptors. The 50mm shank uses a WD adaptor. Choose the correct adaptor to minimise runout and securely hold the drill.

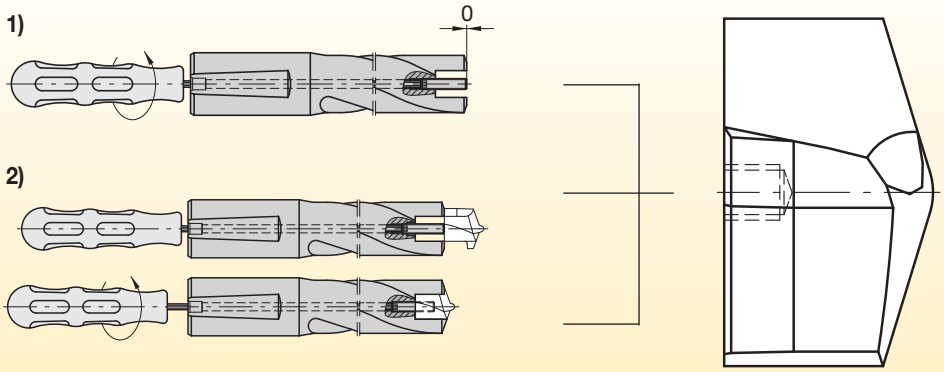
Mounting the Inserts



Inserts (<32mm) without Connector Pin

1) Use the screwdriver to set the threaded pin:
- for inserts up to Ø 32mm, flush with the drill face.
- for inserts bigger Ø 32mm, set 2mm below the drill face.

2) Tighten the insert using the screwdriver to fit securely in the insert seat.

To change the insert, turn the clamping screw anti-clockwise until the insert is released.

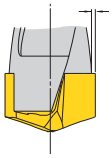
Repair of Damaged Threaded Pin

In the event that the central threaded pin becomes damaged, it can be removed after severing it in the tool body. To do this, drill beneath the insert seat in the tool body. The insert and threaded pin can then be removed. For information regarding the position and diameter of this repair hole, please refer to the manual (sheet **290.001 D/GB**) supplied with the tool body.

NOTE: For inserts without a connector pin, avoid jamming during mounting through precise positioning.

Insert blades may be used, within limits, on different drill bodies. The insert blade must be of the same seat size. Overhang (see Figure 1) must be kept under 0,250mm (.0098") per side. For best drilling performance, rigidity, and efficient chip evacuation, always use the first-choice steel body. Performance may be compromised by using alternatives. In some applications, chips may bind between the drill body and the hole wall — especially when machining long-chipping materials like austenitic stainless steel and low-carbon steel.

(does not apply to stub length drills)



0,250mm (.0098") maximum overhang

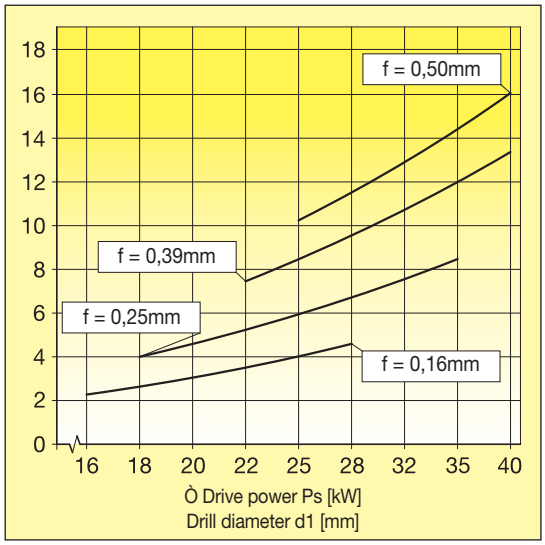
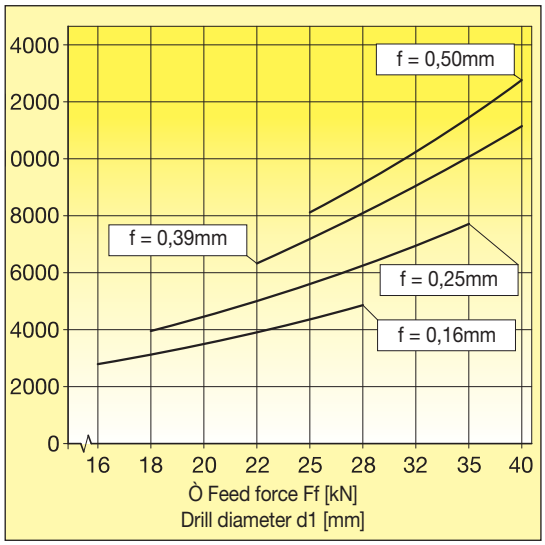
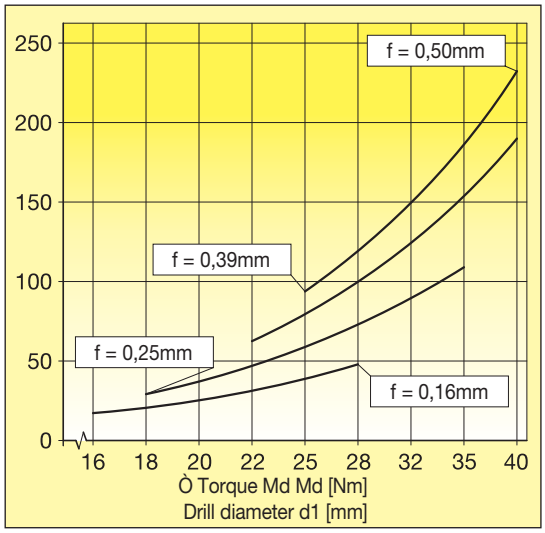
Drive Power (kW)



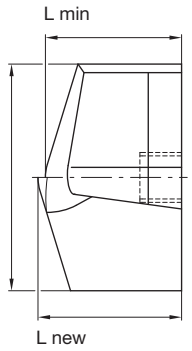
Feed Force (kN)



Torque (Nm)



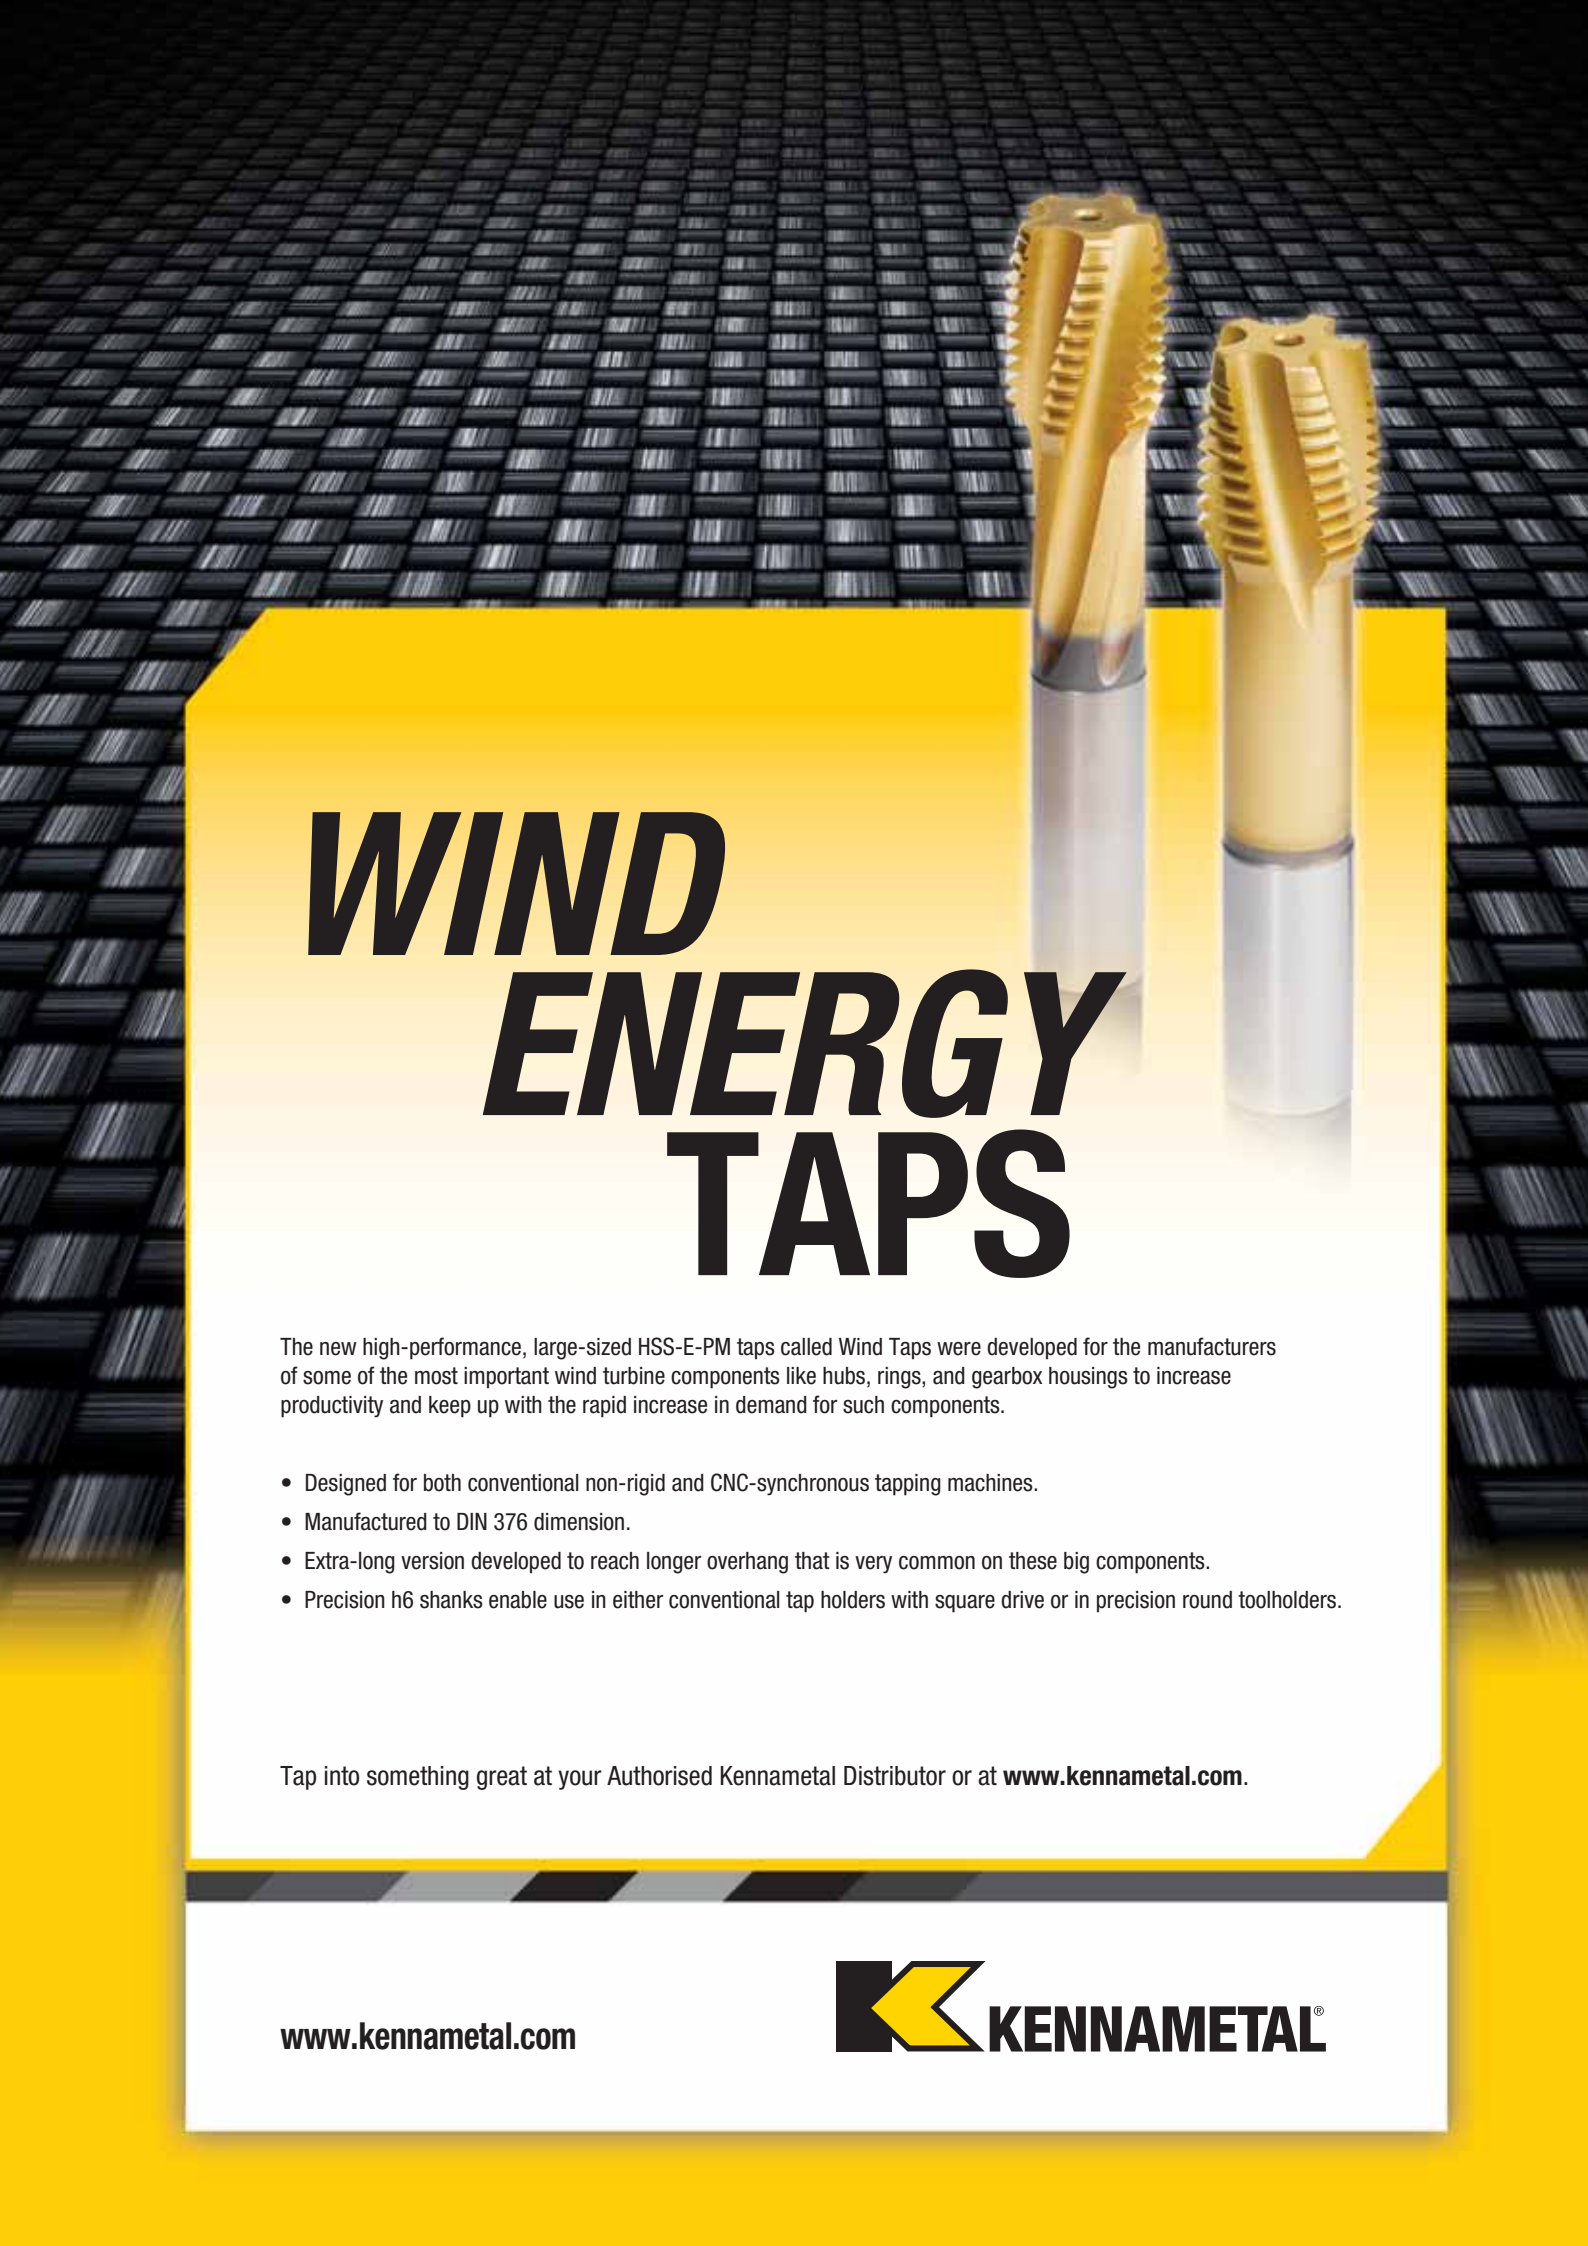
NOTE: The diagrams above are used to determine the drive power, feed force, and torque. They are based on cutting force measurement in tempered steels in Cgr. 6. Tensile strength: Rm = 600 N/mm2. The base cutting speed used is: vc = 80 m/min.



The following coolant pressure is recommended:

relative drilling depth	coolant pressure
1–3 x D	8 bars
5 x D	12 bars
7 x D	20 bars
10 x D	30 bars

insert seat size	diameter range D (mm)	L min (mm)	L new (mm)
C	12,50–13,50	8,5	9,6
B	13,51–14,50	8,9	10,1
A	14,51–15,88	9,4	10,6
1	15,88–18,00	10,3	11,6
2	18,01–19,99	11,2	12,6
3	20,00–22,00	12,1	13,6
4	22,01–24,00	13,0	14,6
5	24,01–26,00	13,9	15,6
6	26,01–28,00	14,8	16,6
7	28,01–30,00	15,7	17,6
8	30,01–32,00	16,6	18,6
9	32,01–36,00	18,4	20,6
10	36,01–40,00	20,2	22,6



WIND ENERGY TAPS

The new high-performance, large-sized HSS-E-PM taps called Wind Taps were developed for the manufacturers of some of the most important wind turbine components like hubs, rings, and gearbox housings to increase productivity and keep up with the rapid increase in demand for such components.

- Designed for both conventional non-rigid and CNC-synchronous tapping machines.
- Manufactured to DIN 376 dimension.
- Extra-long version developed to reach longer overhang that is very common on these big components.
- Precision h6 shanks enable use in either conventional tap holders with square drive or in precision round toolholders.

KENNAMETAL®

KSEM PLUS™ Modular Drill System

The KSEM PLUS drill concept is simple but effective. It combines the benefits of the KSEM modular drill (high feeds and length-to-diameter [L/D] ratios) with the benefits of an indexable drill (high speeds and low consumable costs).

Primary Application

The KSEM PLUS modular drill in steel, cast iron, and stainless steel materials replaces HSS or indexable drilling tool solutions in the diameter range of 28–70mm (1.102–2.756") from 3–10 x D. For applications within the energy market (e.g., bearing rings for windmills), this tool delivers vast improvements in productivity and capacity.

Features and Benefits

Replaceable Head with Newly Developed FDS-Interface Coupling

- Quickly and easily replace inserts or drill heads without the need to remove the complete tool body from the machine.
- Save money and reduce tool stock by changing just the drill head and not the complete tool body if the front section wears out.
- Use one tool body for different sizes of drill heads.

Two Effective Cutting Edges

- Higher metal removal rates than indexable drills.
- Up to 100% increased productivity.
- L/D ratio capabilities from 3–10 x D.

KSEM PLUS Centre Insert with HP

- Feed rate capabilities of modular drills.
- Longer life of KSEM PLUS inserts and no chip flow obstruction.
- No precentring at L/D less than 8 x D.

DFT™/DFR™ Outboard Inserts

- Higher speeds than modular drills.
- More stable cutting conditions.
- Improved surface finish and hole diameter accuracy.

Tailored Grades and Geometries

- KC7315™ grade is a TiAlN-based PVD grade, offering superior performance in all steel applications.
- KC7410™ grade contains multiple layers of PVD coating, offering outstanding wear-resistance when drilling cast irons.
- KC7140™ grade is a TiCN-based PVD grade, offering excellent toughness in unstable conditions and is the first choice in stainless steel.

Customisation

- Heads are available in intermediate diameters and up to Ø 76mm available as semi-standards.
- Tool bodies are available with different shank styles and up to 20x drill Ø as long as total length including shank <920mm.
- Heads for reground inserts are available as semi-standards.
- Tool bodies are available with different shank styles.
- B1 style heads with DFC outboard inserts are available for machining stacked plates, cross hole applications, and situations with inclined exits.

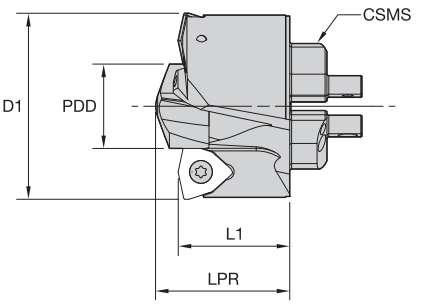
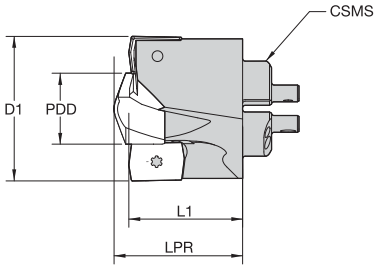
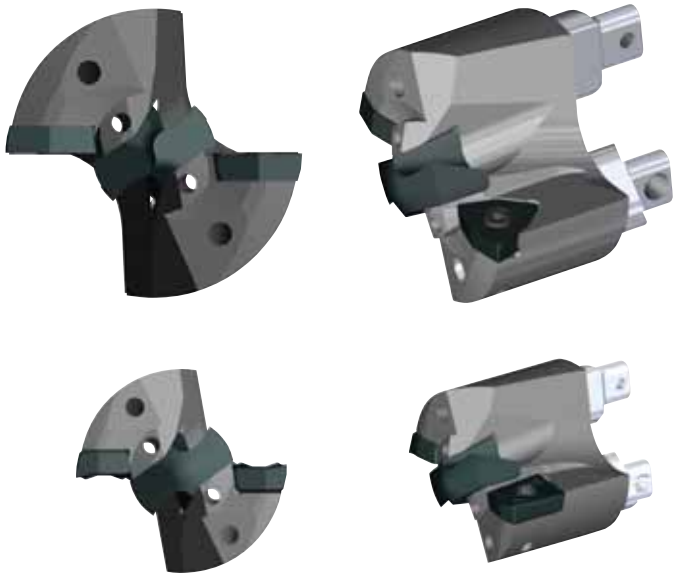
- To ensure 100% system stability, KSEM™ inserts used for KSEM PLUS should not be reground.
- KSEM PLUS heads are shipped with all insert screws.
- KSEM PLUS heads are shipped with two wrenches: one for the KSEM insert and one to be used for the DFT™/DFR™ inserts as well as for the assembly of the body to the head.
- Order KSEM PLUS shanks using connection coupling size (CSMS) to determine which heads go with each shank.
- PDD in the callout drawing refers to the D1 of the HPGM and HPCM inserts for use with KSEM PLUS.
- Order inserts (KSEM, DFT, and DFR) for KSEM PLUS separately.







NEW!

KSEM PLUS Heads 28–70mm

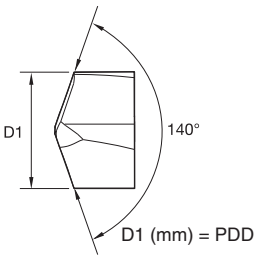
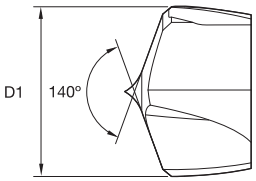
- To ensure 100% system stability, KSEM™ inserts used for KSEM PLUS should not be reground.
- The callout D1 (mm) = PDD. PDD is used in reference to the KSEM PLUS heads.



D1 (mm) = PDD



D1 (mm) = PDD

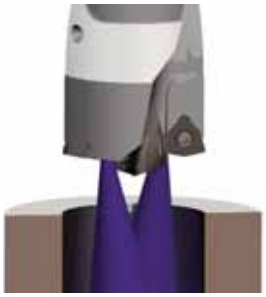
Cored holes

Hole expansion
on the centre axis

Coolant Recommendations

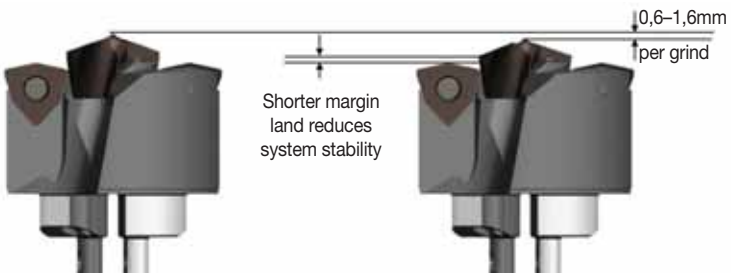


Internal coolant is recommended for optimum chip flow and tool life.

KSEM PLUS Application Cautions and Piloting

Application		L/D<6 x D	L/D<8 x D	L/D>8 x D
	Regular Entrance Exit	Piloting Not Required	Reduce Feed by 50%	KSEM™ Pilot Drill
	Angled Entrance <3°	KSEM Pilot Drill	KSEM Pilot Drill	KSEM Pilot Drill
	Angled and Concave Entrance >3°	Face Mill and KSEM Pilot Drill	Face Mill and KSEM Pilot Drill	Face Mill and KSEM Pilot Drill
	Angled Exit	Regular Entrance Exit	Reduce Feed by 75%	Not Recommended
	Stacked Material	Stacked material requires a custom solution head using S2S inserts.		

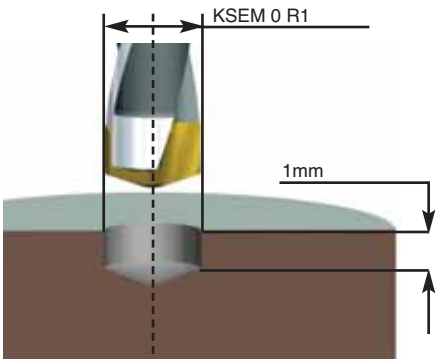
The KSEM PLUS Piloting Insert SHOULD NOT be Reground:



Only new KSEM PLUS inserts will provide consistency and process security of the KSEM PLUS modular drill system.

NOTE: Reground KSEM PLUS inserts can be used in KSEM drills.

Piloting Instructions:



1. KSEM....PCM
   Pilot drill Ø equal KSEMP Ø PDD

2. Drill 1mm deep from full diameter

New KSEM PLUS B1 Head

Discover *New* Dimensions with

KSEM PLUS™ Extensions

KSEM PLUS is the industry benchmark when drilling large diameter applications. With significantly reduced cost per hole, KSEM PLUS now extends its range.

Diameter Extension:

- New generation of large heads featuring diameters above 70mm and up to 127mm in 10 x D*.

Application Extension:

- New KSEM PLUS B1 heads for difficult applications using new DFC inserts and guiding pads.
- Drilling through inclined exits up to 15°.
- Perfect guidance of head when drilling through cross holes with widths up to 50% of drill diameter.
- Works great in stacked materials.
- Standard range of KSEM PLUS B1 heads available from 28–70mm*.

"This is not drilling, this is more like punching! Surfaces and accuracy are fully compliant with our requirements. We have been waiting a long time for such a drill!"
Customer, Germany

Combination Tools

Combination Drilling Tools are customisable using standard components and combine centring, drilling, and countersinking into a single operation, increasing productivity by reducing cycle time and tool changes.

Both the BF and SEFAS™ combination systems provide high flexibility to adapt the tool to varying hole geometries and provide full through-coolant capabilities.

BF Combination Drilling System

- Drilling, chamfering, and countersinking in one tool.
- Uses solid carbide and modular KenTIP™ drills.
- Covered drill diameter range 3,4–18mm.
- A specific range of drill diameters can be applied for each drill body based upon drill shank size.
- Highly flexible system:
  - Chamfer insert with different angles.
  - Insert design enables for special geometrical shapes.
  - Inserts can be easily interchanged.

SEFAS™ Combination Drilling System

- High-performance, self-centring drill and chamfer in one tool.
- Drill diameter range 4–18mm.
- Uses standard solid carbide drills in HP and TX styles as well as modular KenTIP drills.
- 90° and 82° angles available for chamfer inserts.
- Various shanks can be used with metric and inch diameter drills.

NOTE: TF drills may be used with one insert in limited applications.
Consult your Kennametal Sales Representative for more information.

BF Combination Drilling System

Primary Application

Combines centring, drilling, and countersinking into a single operation, increasing productivity by reducing cycle time and number of tool changes. The modular design provides flexibility to adapt the tool to varying hole geometries in small- and medium-lot-size manufacturing.

With its slim design and full-through-coolant capabilities, the BF combination system can be used even for deeper holes, critical materials, and with restricted workspace.

Features and Benefits

Productivity

- Reduce the number of tool changes and your cycle time by combining drilling and countersinking into one operation.
- Use high-performance solid carbide drills and KenTIP™ drill bodies to achieve high speeds and feeds.
- Avoid the need for reconditioning by using KenTIP blades.

Versatility

- Choose between solid carbide drills and KenTIP drill bodies.
- Various grades and insert styles.
- Benefit from the modular system when adjusting the drill length or insert style to manufacture different geometries.

Customisation

- Length variations available as engineered solutions.
- TX drills for aluminium are available as engineered solutions.
- BF inserts can be customised to almost any required geometry.

NOTE: When using BF bodies with KTIP, please refer to the recommended cutting data for KTIP tools on page H11.
Please be aware that the values mentioned are only guidelines.
It is highly recommended to adjust cutting data according to your specific application in order to achieve best drilling results.

SEFAS™ Combination Drilling System

Primary Application

Combines centring, drilling, and chamfering into a single operation, increasing productivity by reducing cycle time and number of tool changes.

These productivity gains can be achieved by still using standard solid carbide or KenTIP™ drills. The system provides full through coolant capabilities.

Features and Benefits

Productivity

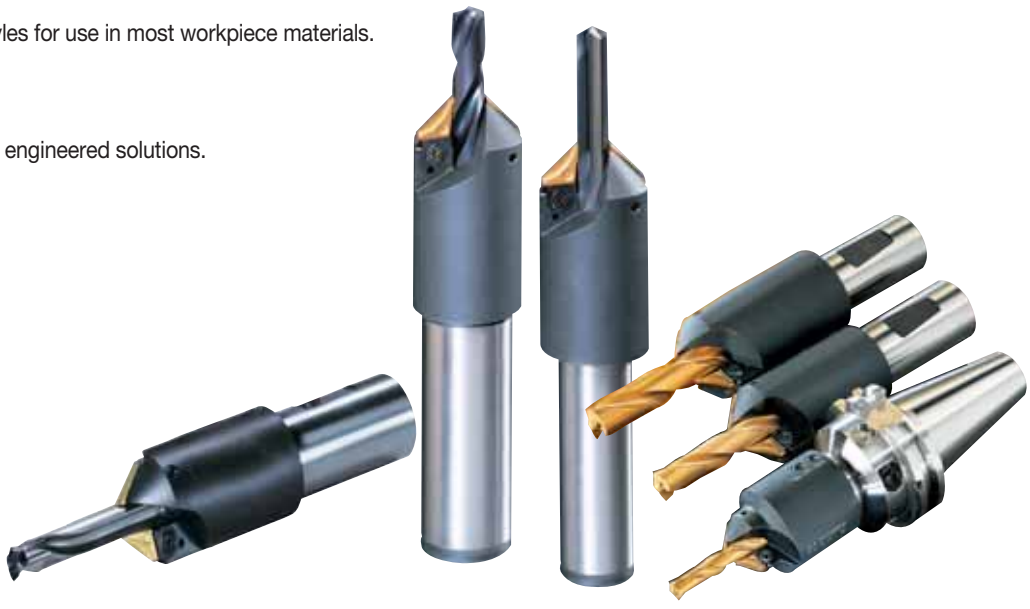
- Reduce the number of tool changes and your cycle time by combining drilling and countersinking into one operation.
- Achieve highest metal removal rates by applying a HP-style drill.
- Reduce your inventory and avoid reconditioning by using KenTIP blades.
- Easily change tool within the machine by applying KenTIP.

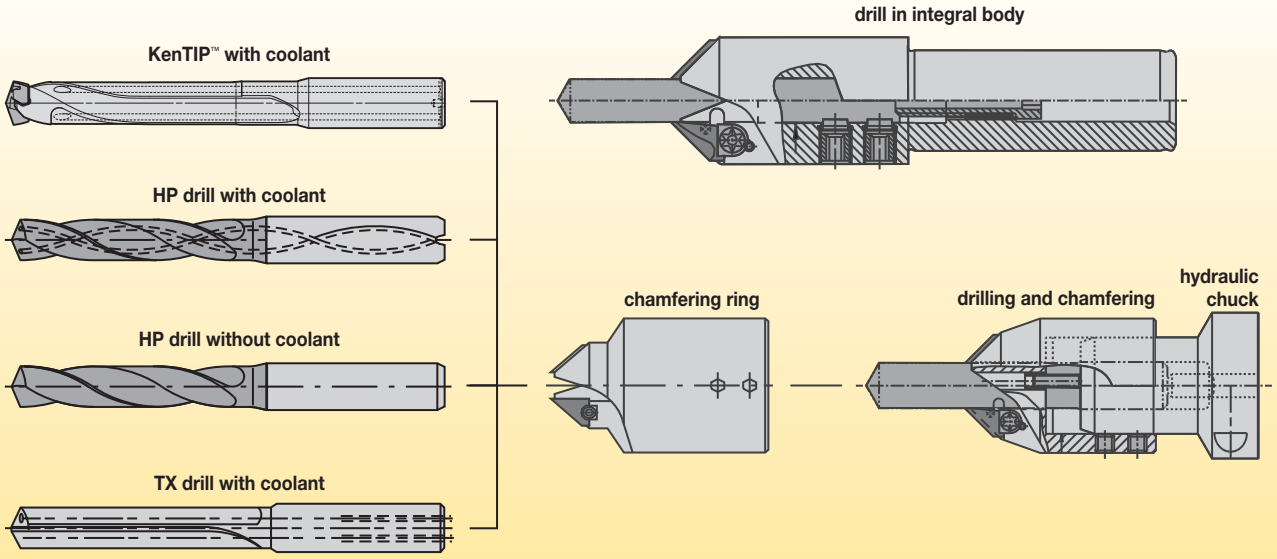
Versatility

- Any style of standard HP drill can be used, achieving highest metal removal rates.
- Use TX drills to achieve excellent hole quality and tool life in non-ferrous materials.
- For increased accuracy and tool life, use the Kennametal hydraulic chuck recommended for cylindrical tool shanks.
- Benefit from various insert styles for use in most workpiece materials.

Customisation

- Length variations available as engineered solutions.





The SEFAS combination drilling system may be used in most workpiece materials. The design and flexibility of the system can be used with a wide variety of solid carbide drills.

Three types of SEFAS chamfering tools are offered: (1) integral bodies with a compact design that provides additional workpiece and work-holding clearance; (2) chamfering rings that may be mounted to Kennametal hydraulic chucks for optimal drill performance and increased productivity; and (3) high-performance HSK bodies for new machine spindles and high-output applications.

- Drill body shipped with all screws, clamps, and wrenches.
- Order the inserts and drills separately.
- Two chamfer inserts required per body.

NOTE: TS_{100}: maximum sink depths at which the full feed values can be maintained during chamfering and sinking.
TS_{80}: maximum sink depths that can be achieved without chipbreak cycles and at a 20% feed reduction.
TS_{max}: maximum sink depths that can be achieved without chipbreak cycles and at a 50% feed reduction.
When using SEFAS with GOdrill™, please contact your Kennametal representative for application support.

Drill Fix™ DFR™, DFS™, and DFT™

Primary Application

Drill short holes up to 5 x D with DFR, DFS, and DFT indexable drills in steel, cast iron, ductile iron, stainless steel, and non-ferrous materials. The Drill Fix portfolio covers the diameter range 12,5–82mm.

Apply where speed and economy are prime considerations.

Features and Benefits

Drill Fix DFR

- Diameter range of 12,5–24mm in 2 x D, 3 x D, and 4 x D.
- Rectangular-shaped inserts offer the highest stability and feed rates at smaller sizes.
- Long body tool life due to soft starting cut, short chips, and low cutting forces.
- X-offset design to adjust diameter size on turning machines and optimise tolerances on machining centres.

Drill Fix DFS

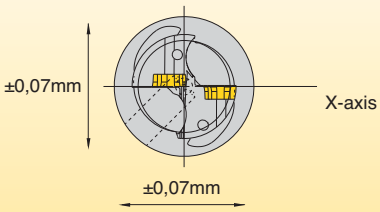
- Combines the benefits of a trigon-style DFT inboard insert and a square-style SP..X outboard insert.
- Standard diameter range from 24–55mm in 2 x D, 3 x D, 4 x D, and new 5 x D.
- Drill Fix DFT insert has inner insert for best centring capabilities.
- Squared-outboard insert offering four economic cutting edges.
- Highest feed rates and cutting speeds applicable due to highly stable tool body design.
- X-offset design to adjust diameter size on turning machines and optimise tolerances on machining centres.
- Beyond™ grades to achieve highest productivity, achieving outstanding results in steel, stainless steel, and cast iron.

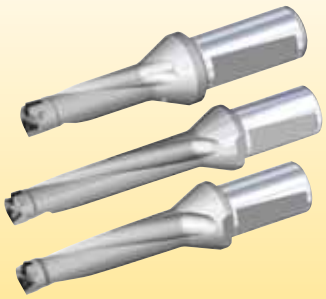
Drill Fix™ DFT™

- One drill system that covers a large diameter range, from 24–82mm in 2,5 x D and 4 x D.
- Best centring capabilities due to trigon-shaped inserts used as inboard and outboard insert.
- Various insert grades and geometries available.
- Balanced cutting forces in the shank centre for highest tool body stability.
- X-offset design to adjust diameter size on turning machines and optimise tolerances on machining centres.

Stationary Applications

Metric Drill Bodies with 2° Whistle Notch™





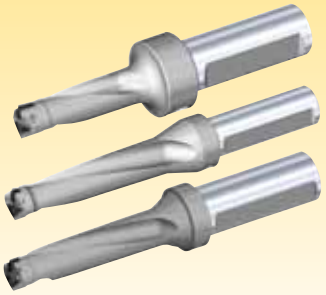
Metric shank drills with a 2° Whistle Notch shank are easily mounted into inch turrets using a WD adaptor. Align the X-axis of the drill with the X-axis of the machine tool as described above. Accurate alignment is absolutely essential for good performance. The drill must be on centre within the tolerance shown above. Angularity must not exceed 0,07mm.

Inch Bodies • Flange

Drill Fix™ inch drills, with a flange, were designed for use on lathes or any machine where the tool remains stationary and the workpiece rotates.

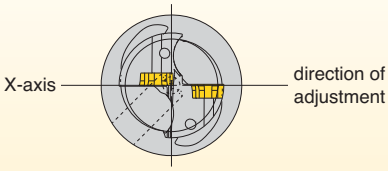
An “x” is marked on the flat of the X-axis of the drill to aid insert orientation on the machine tool.

It is important to align the X-axis of the drill with the X-axis on the machine tool. Accurate alignment is absolutely essential for good performance. The drill must be on centre, within the tolerance shown here. Angularity must not exceed 0,07mm within the designated drill depth.



Drill Fix X-Adjustment

Applications Examples

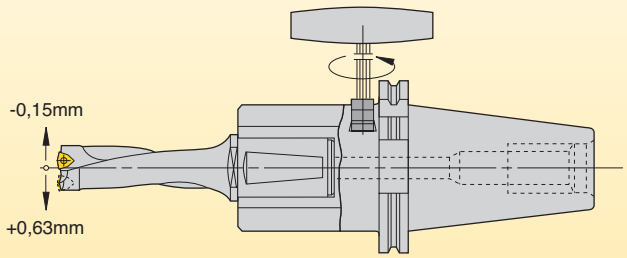


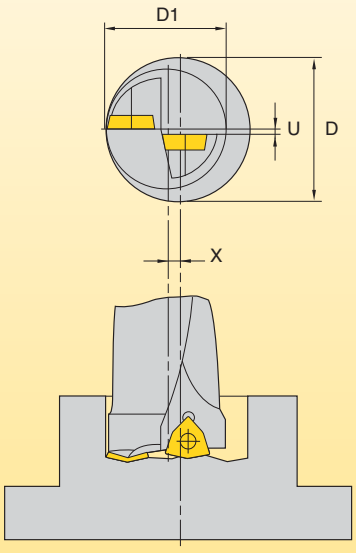
Stationary Tool

The X-adjustment must be made at the outer cutting edge, parallel to the surface of the outer insert when the turret of the turning machine is offset along the X-axis.

Rotating Tool • Straight Shank

Use an adjustable eccentric chuck with a steep taper to help offset the drill along the X-axis when machining with a rotating tool on a machining centre.





X-Adjustment Description

Different diameter holes can be drilled using the same Drill Fix drill. Holes with a diameter greater than the nominal diameter can be drilled directly into a solid. Intermediate dimensions are produced by means of the X-adjustment.

Benefits

- Eliminates the need for special tools for intermediate dimensions.
- Just a few drills cover a wide application range.
- Once precise adjustment of the desired diameter is made, tolerances of ± 0,05mm are achieved.

Additional information on X-adjustment, as well as additional information to Drill Fix tools, is available on the Kennametal website, www.kennametal.com.

Drill Fix™ DFR™

Drill Fix DFR offers maximum feed rates at diameter range 12,5–24mm at 2 x D, 3 x D, and 4 x D applications. Using rectangular-shaped inboard and outboard inserts enables soft starting cuts and short chips as well as enabling higher feed rates than small-size symmetrical-trigon or square inserts. Drill Fix DFR's low cutting forces provide long tool body life and highest stability at smallest sizes.

Furthermore, these inserts enable soft starting cuts and short chips. The low cutting forces of a Drill Fix DFR provide long tool body life and highest stability at smallest sizes.

Features and Benefits

Productivity and Profitability

- Achieve highest feed rates with rectangular-shaped inserts that offer a soft starting cut and highest stability.
- Use X-offset on turning machines to adjust the drill diameter, eliminating the need for specials in many applications and on machining centres, to reach tolerance optimisation.
- Same insert size is used in each pocket, reducing inventory costs.

Versatility

- Diameter range covering 12,5–24mm.
- 2 x D, 3 x D, and 4 x D L/D ratios as standard.
- Various shanks as standard available: WD, SSF, and new KM-TS™.
- Multiple insert grades and geometries available.
- Use where feed rates are the limiting factor.
- Apply at straight holes, inclined entries and exits, interrupted cuts, and rough or welded entry surfaces.
- Eccentric chuck available as standard.

Reliability

- Highest stability at smaller sizes due to rectangular-shaped insert.
- Same insert can be used as inboard or outboard insert. No risk of mixing up inner and outer insert.
- Low cutting forces resulting in long body tool life.

Customisation

- Intermediate diameters available as semi-standards.
- Engineered solutions available.
- Multistep drills available upon request.
- Left-hand version available.

*To learn more, **scan here**.*

WARNING
During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

Drill Fix™ DFS™

Drill Fix DFS combines the economical squared outboard insert with the superior centring capabilities of the trigon inboard insert. The DFS indexable drills offer increased metal removal rates combined with high surface quality and hole straightness.

Available in a diameter range of 24–48mm, the Drill Fix DFS provides the highest cutting data capabilities, even under difficult conditions, offering long tool body life and excellent chip evacuation. DFS indexable drills are now available as standard up to 5 x D supplementing the portfolio of 2 x D, 3 x D, and 4 x D.

Boost your productivity even further and achieve outstanding results in steel, stainless steel, and cast iron with the new Beyond™ DFS outboard inserts in KCPK10™, KCU25™, and KCU40™.

Features and Benefits

Higher Productivity and Profitability

- Achieve highest metal removal rates and excellent chip evacuation due to advanced chip flutes and non-central and increased cooling channels.
- Make use of squared outboard inserts that offer four economic cutting edges where needed.
- Benefit from a complete product portfolio offering standard L/D ratios up to 5 x D.

Versatility

- Drill holes up to 5 x D in steel, cast iron, ductile iron, stainless steel, and non-ferrous materials.
- Use where speed and economy are prime considerations.
- Apply DFS drills to straight holes, inclined entries and exits, interrupted cuts, and rough or welded entry surfaces.
- Use X-offset on turning machines to adjust the drill diameter, eliminating the need for specials in many applications and on machining centres to reach tolerance optimisation.
- Eccentric chuck available as standard.

Reliability

- Benefit from high-accuracy holes independently from feed rates applied.
- Gain outstanding results by applying the Beyond DFS inserts.
- High wear resistance at interrupted cuts due to squared outboard insert.

Customisation

- Intermediate diameters, multistep drills, and other non-standard shanks are available.
- Smaller and larger diameters available.

- Drill shipped with insert screws and Torx wrench.
- See pages J70–J72 and J74–J75 for inserts.

WARNING
During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

Pocket seat: I = Inboard insert; O = Outboard insert

Drill Fix™ DFT™

Drill Fix DFT is available in the diameter range 24–82mm as a versatile and reliable tool solution with a large portfolio of lengths, insert geometries, and grades.

Balanced cutting forces, improved chip flute, and coolant-channel design enable high metal removal rates and long tool body life. The trigon-shaped DFT inserts are used for both inboard and outboard inserts and offer the highest centring capabilities and three cutting edges each.

Features and Benefits

Productivity and Profitability

- Achieve high hole accuracy with trigon-shaped inboard inserts that offer the highest centring capabilities.
- Use X-offset on turning machines to adjust the drill diameter, eliminating the need for specials in many applications and on machining centres to reach tolerance optimisation.
- Same insert size is used in each pocket reducing inventory costs.

Versatility

Use Drill Fix DFT as most versatile and reliable indexable drilling tool:

- Diameter range covering 24–82mm.
- 2,5 x D and 4 x D L/D ratios are standard.
- Various shanks available as standard: WD, SSF, and new KM-TS™.
- Trigon-shaped inserts offer three cutting edges.
- Large variety of DFT insert grades and geometries available.
- Apply DFT drills to straight holes, inclined entries and exits, interrupted cuts, and rough or welded entry surfaces.
- Eccentric chuck available as standard.

Reliability

- Highest centring capabilities due to trigon-shaped insert.
- Same insert can be used as inboard or outboard insert — no risk of mixing up inner and outer inserts.
- Benefit from improved chip flute and coolant-channel design resulting in long tool body life and excellent chip evacuation.

Customisation

- Intermediate diameters available as semi-standards.
- Engineered solutions available.
- Multistep drills available upon request.
- Stacked material version.

WARNING
During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

HTS Series Indexable Deep-Hole Drilling System

Primary Application

HTS series indexable drills are designed for deep-hole drilling up to 10 x D in steel, stainless steel, ductile iron, cast iron, and non-ferrous materials. The three HTS systems — HTS-C, HTS, HTS-R — cover a diameter range of 20–270mm.

Features and Benefits

HTS-C Indexable Drill System

- Diameter range 20–45mm in 5 x D and 8 x D ratios.
- Used with pilot drills for best centring possibilities.
- Trigon-shaped inboard insert with three cutting edges, available in various geometries and grades.
- Up to four economic cutting edges with the squared-outboard insert.
- Variable flute helix provides excellent chip evacuation.
- Customised body design available.

HTS Indexable Drill System

- Large diameter range from 45–270mm with standard drill heads.
- Drill Fix DFT™ trigon inserts as outboard and inboard insert offer the best centring capabilities as well as square-outboard insert cartridges for increased surface and hole quality.
- Various insert geometries and grades available as standard.
- Adjust drilling depth and diameter range with suitable extensions and reducers.
- Diameter adjustment by shortening outer cartridge.
- Customised drilling heads up to 540mm.

HTS-R Indexable Drill System

- Modular system that uses drill heads equipped with DFR™ insert cartridges.
- Five drill heads cover the diameter range 40–55mm.
- Drill Fix™ DFR rectangular inboard and outboard inserts offer the highest feed rates at small diameters.
- Various insert geometries and grades available as standard.
- Adjustable drilling depth and diameters by using extensions and reducers.
- Diameter adjustment by shortening outer cartridge.

HTS-C Indexable Drill System

HTS-C Indexable Drills are designed for drilling 5 x D and 8 x D in steel, stainless steel, ductile iron, cast iron, and non-ferrous materials. The HTS-C covers a diameter range from 20–45mm.

When using reduced feeds and cutting speeds, HTS-C can easily be applied on older or low-power machines.

Features and Benefits

Productivity

- Achieve high stability and hole straightness due to the pilot drill that offers the best centring capabilities.
- Benefit from flute helix design that provides excellent chip evacuation resulting in long tool body life.
- Suitable for older or low-power machines due to reduced feed and cutting speed capabilities.

Versatility

- Diameter range of 20–45mm.
- 5 x D and 8 x D L/D ratio as standard.
- Inserts and pilot drills can be applied in various diameters and L/D ratios.
- Carbide and HSS pilot drills available for optimised productivity.

Customisation

- Intermediate diameters available.
- Engineered solutions L/D up to 15 x D available.
- Carbide guidepads available.

- Drills shipped with insert, clamping, and adjusting screws and Torx wrench.
- Order pilot drills separately; see page J37.
- Order inserts separately; see pages J70, J71, J74, J75, J78, and J79.

WARNING
During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

Condition: S = Stable cutting conditions; U = Unstable cutting conditions; I = Interrupted cutting conditions
Pocket seat: I = Inboard insert; O = Outboard insert

HTS Indexable Drill System

The HTS Indexable Drill system is one of the most reliable deep-hole drilling systems available. Drilling up to 10 x D can be easily achieved in materials like steel, stainless steel, ductile iron, cast iron, and non-ferrous materials. Various drilling heads cover the diameter range 45–270mm.

HTS drill heads are equipped with pilot drills and cartridges using trigon-shaped Drill Fix™ DFT™ inserts. Use HTS extensions and reducers to achieve various diameters and depths of drilling.

For improved surface qualities and increased reliability, finishing HTS cartridges with a squared-outboard insert are available as standard.

Features and Benefits

Productivity

- Achieve high hole accuracy by using pilot drills and trigon-shaped inserts.
- Benefit from improved surface qualities using finishing cartridges with squared outboard insert.
- Adjust outer cartridge to produce the desired cutting diameter, reducing inventory.
- Same insert size is used in each insert cartridge, reducing inventory costs.

Versatility

- Diameter range covering 45–270mm.
- L/D ratio up to 10 x D as standard.
- Inserts and pilot drills can be applied in various heads and cartridges, covering various diameters.
- Large variety of DFT insert grades and geometries available.
- Finishing cartridge with squared outboard insert offering four cutting edges for high process stability.
- Carbide pilot drills are available upon request.

Customisation

- Wear pads can be added for increased stability.
- Fully engineered solutions available.
- Engineered solutions covering diameter range up to 540mm are possible.

HTS-R Indexable Drill System

The HTS-R extends the HTS system by covering diameters between 40–55mm.

Up to 30% higher feed rates achievable with rectangular-shaped Drill Fix™ DFR™ inserts with the added benefit of improved chip control.

Features and Benefits

Productivity

- Benefit from better chip control and higher insert stability for longer tool body life.
- Same insert size is used in each insert cartridge.

Versatility

- Diameter range covering 40–55mm with five drilling heads.
- Large variety of DFR insert grades and geometries available.
- Outer cartridges can be adjusted to produce the desired cutting diameter.
- Extensions and reducers are available as standard.
- Solid carbide and HSS pilot drills are available to match the cutting conditions to your specific applications.

Customisation

- Wear pads can be added for increased stability.
- Fully engineered solutions available.

Pilot drill should be installed and set to the proper length before installing the inner cartridge.

Install inner cartridge, then the outer insert.

Install inner insert into cartridge.

To assemble your HTS(-R) head, choose the desired drill diameter range from the left-hand column.
Next, follow the columns to the right, and select the appropriate component from each column to complete your HTS(-R) head.

- Change drill diameter by shortening the outer cartridge.
- Shorten at 90° to the contact face A and the support face B.
- Shortening reduces the effective drill diameter by 2x the amount removed.

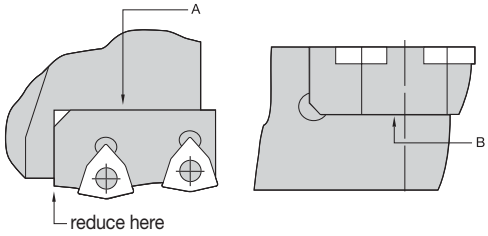
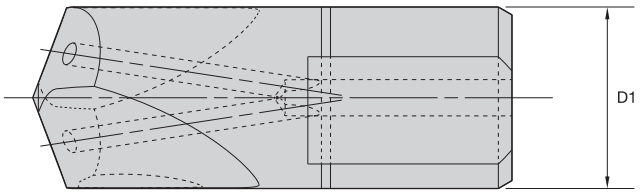
- Change drill diameter by shortening the outer cartridge.
- Shorten at 90° to the contact face A and the support face B.
- Shortening reduces the effective drill diameter by two times the amount removed.





8–10mm sizes are without coolant.

wear resistance ⟷ toughness

Grade

Coating	Grade Description	05	10	15	20	25	30	35	40	45
KCPK10  Al_2O_3 TiCN	Composition: With an advanced CVD TiCN-Al_2O_3 coating combined with a cobalt-enriched carbide substrate, this grade offers a balanced combination of deformation resistance and edge toughness. Application: The KCPK10 grade offers outstanding abrasion and crater wear resistance for high-speed machining of steels and cast irons. Use for very high cutting speeds with low to medium feed rates.	P								
KCU25  Al_2O_3 TiCN	Composition: This advanced CVD TiCN-Al_2O_3 coating together with a newly engineered tough carbide substrate, adequate deformation resistance along with excellent edge strength is ensured and offers very good wear resistance over a wide range of machining conditions. Application: KCU25, as a high productivity grade with high speeds and feeds, is the first choice for productive process with very good reliability in steels, stainless steels, and cast irons.	P								
KCU40  PVD TiN_TiAlN	Composition: With a multilayered PVD TiN-TiAlN coating and a tough substrate, this grade withstands interruptions and provides high wear resistance for long tool life. Application: The KCU40 grade is the first choice for high reliability in most materials. This grade should be used at medium speeds and high feeds due to sharper edges and as a grade for high toughness applications. It covers steel, stainless steel, cast iron, and high-temp alloys under certain conditions.	P

CTR™ Counterboring Tools

CTR Counterboring Tools are designed for high-production screw-head counterbores and similar counterboring operations. Tools can be adapted to almost all applications resulting in optimum cutting performance and long tool life.

Extremely unequal insert positioning and flutes prevent chattering and generates less noise. A precise 90° bottom can be achieved with the S2 S inserts.

Features and Benefits

Productivity and Reliability

- S2 S inserts reduce additional drill operations to achieve a precise 90° bottom.
- Chatter-free operations for improved surface quality due to extremely unequal insert positioning and flutes.
- Yield high metal removal rates to reduce machine time and manufacturing costs.

Versatility

- Counterboring tools can be applied for steel, stainless steel, non-ferrous materials, cast irons, and heat-resistant alloy applications.
- Toolholders are double- or triple-fluted at a diameter range starting at 15–46mm offering through-coolant capabilities.
- S2 S standard inserts are double edged and available in various grades and geometries.

Customisation

- Length and diameter variations with and without adjustable cartridges available.
- Combination and multistep tooling based on drilling tools, like Drill Fix™, with short distance and small diameter steps.
- Various radii and customised grades available upon request.

- Counterboring tool shipped with insert screws and Torx wrench.
- Order inserts separately; see pages J78–J79.

ModBORE Boring Systems **K180–K204**

Hole Finishing with Kennametal

Owning the entire process chain from raw materials all the way to reconditioning means Kennametal is almost the only source in the metalworking industry where you can get all types of Hole Finishing tooling, from reaming and fine boring to motion tooling, directly from one hand. Kennametal is capable of offering you customised solutions for your application that are the best fit for your machining challenge without any limitations, in regard to portfolio or capacity.

PCD Tooling

- Extremely productive and tailored for satisfying your high-volume production needs.
- Several standard PCD grades, like KD1415™ and KD1425™, are available to provide the highest tool life and cutting data as well as unmatched surface and diameter tolerance quality.
- Platforms are available depending on your application and preference from steel to carbide based, adjustable pocket seats, fine-boring components like Romicron™ or FB cartridges, spindle couplings, or SIF™ steerable adaptors.

Multiflute Reaming

- RMS™, RMB™, and RHM™.
- Highly productive and easy to apply.
- Large, standard, off-the-shelf portfolio of solid carbide, cermet, carbide-tipped, and modular reaming tools, all ground to achieve H7 without any customisation.
- Complex Specials with multiple steps, coupling, and length variations are available.
- Intermediate sizes, grades, and lead chamfers available with short delivery.

Padded Reaming

- RIQ™ Quattro Cut™ and RIR™.
- Highest precision and surface quality achievable but still easy to apply.
- RIQ is the market-leading reaming technology, enabling you to leave out any back taper adjustment, dramatically reducing setup time and effort while still offering highest accuracy and surface quality and four cutting edges with PCD, CBN, carbide, or cermet.
- RIR provides you the most stable pocket seat and fail-safe clamping, from smallest to largest diameters.
- Combine the large, standard RIQ and RIR insert offering with your customised tool body.

Fine Boring

- Romicron™ and ModBORE™
- Extremely flexible, covering a very large diameter and length range.
- Offers the latest grade technology by using standard turning inserts.
- Romicron enables diameter modifications directly at the machine by hand without setup equipment or accuracy affecting lock screws.
- ModBORE offers a very large diameter range with each type of tool along with roughing to finishing tooling and can be easily and safely adapted to every KM™ spindle.

Motion Tooling

- Sophisticated tooling achieves most challenging tasks.
- Large, customised Complex Solution portfolio of:
  - Linear feed out heads.
  - Eccentric actuating heads.
  - Pivot heads.
  - Cylinder boring tools.
  - Line boring bars.
  - Bottle boring tools.
  - Valve seat and guide tools.
  - Machining centre tools.
- Depending on your application and preference, tools are based on the positive-stop-principle; use drawbars, like with engineered solution machines, or don't require machining centre modifications at all.

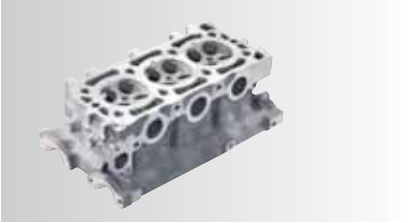
Cylinder Head



RIQ™ QUATTRO CUT™ VALVE SEAT & GUIDE PARENT BORE

CHALLENGE

- Valve seat and guide parent bore machining combined.
- Tolerance range 8 µm.
- Cast iron.
- Machining centre with internal coolant.

SOLUTION

- RIQ padded reamer with integrated hydraulic chuck.
- RIQ Full face CBN KB1630™ insert.
- RMS™ reamer for guide parent bore.

CUTTING DATA

- vc 425 m/min f 0,10 mm/rev valve seat.
- vc 130 m/min f 0,60 mm/rev valve guide.

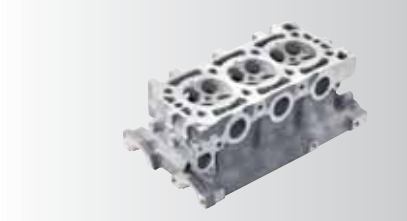
RESULT

- **Four usable cutting edges per CBN insert.**
- **CBN RIQ insert with 28.000 bore tool life.**
- **1.400 bores with regrindable RMS reamer.**

BENEFIT

- **Cost savings due to four edged full face CBN insert.**
- **No insert back taper adjustment needed.**
- **Same RPM at both stages saving time of spindle acceleration and deceleration.**

Cylinder Head



Polished flutes
for improved
chip evacuation

PCD SEAT & GUIDE PARENT BORE PCDRSC04RLE

CHALLENGE

- Valve seat and guide parent bore machining combined.
- Tolerance range H7.
- Aluminium.
- Machining centre with internal coolant.

SOLUTION

- PCD tipped, steel based tool (valve seat) with shrink in PCD tip, carbide based reamer (valve guide) with less than 4 µm total run out.

CUTTING DATA

- vc 344 m/min f 0,60 mm/rev valve seat.
- vc 985 m/min f 0,60 mm/rev valve guide.

RESULT

- **Tool life of 456.000 bores.**

BENEFIT

- **Productivity increases as same RPM applied to both seat and guide stages.**
- **Lowest possible run out resulting in higher tool life.**

Cylinder Head

RIQ serration defines valve seat angle

RIQ™ QUATTRO CUT™ VALVE SEAT & GUIDE MACHINING

CHALLENGE

- Valve guide machining combined with primary and secondary seat angles.
- Sinter metal.
- Concentricity of seat to guide less than 50 µm.
- Machining centre with internal coolant.

SOLUTION

- RIQ Valve Seat tooling with integrated hydraulic chuck.
- RIQ K68™ carbide inserts and solid carbide RMS™ multiflute reamer.

CUTTING DATA

- vc 80 m/min f 0,10 mm/rev valve seat.
- vc 80 m/min f 0,32 mm/rev valve guide.

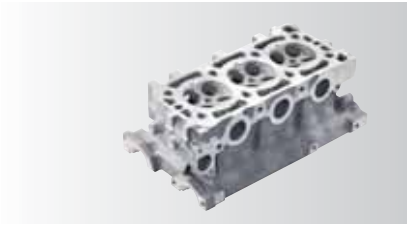
RESULT

- **Tool life of 12.000 valve seats per insert.**

BENEFIT

- **Twelve usable cutting edges per carbide insert.**
- **Due to high precision RIQ pocket seat there is less setup effort as no angular adjustment of the insert is needed.**
- **Able to adapt RIR™ padded reamer machining the valve guide.**

Cylinder Head



RIQ serration defines valve seat angle

RIQ™ QUATTRO CUT™ VALVE SEAT & GUIDE MACHINING

CHALLENGE

- Valve guide machining combined with primary and secondary seat angles.
- Sinter metal.
- Concentricity of seat to guide less than 50 µm.
- Transfer line with internal coolant.

SOLUTION

- RIQ Valve Seat tooling with carbide bushing for Valve Guide reaming tools.
- RIQ KB1630™ insert with TiN wear indicator.
- RIR™ padded reamer machining.

CUTTING DATA

- vc 80 m/min f 0,07 mm/rev valve seat.
- vc 60 m/min f 0,14 mm/rev valve guide.

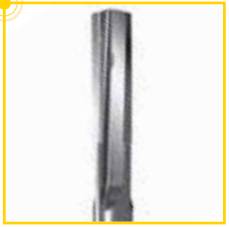
RESULT

- **Tool life of 18.000 valve seats per roughing insert.**
- **Tool life of 12.000 valve seats per roughing insert.**

BENEFIT

- **Twelve usable cutting edges per full face CBN insert.**
- **Due to high precision RIQ pocket seat there is less setup effort as no angular adjustment of the insert is needed.**
- **Able to adapt RMS™ solid carbide reamer machining the valve guide.**

Cylinder Head



Semi finish stage
after pilot hole

PCD insert with
chipbreaker

RMS™ VALVE GUIDE MACHINING

CHALLENGE

- Valve guide bore Ø 6mm (.236").
- Tolerance range 12 µm H7.
- Brass material, lead free.
- Concentricity of seat to guide less than 50 µm.

SOLUTION

- RMS solid carbide reamer — engineered solution.
- Machining centre — with semi finish stage for picking up pilot hole.
- Transfer line — without semi finish stage.

CUTTING DATA

- vc 30 m/min (98 SFM).
- f 0,42 mm/rev (.017 IPR).

RESULT

- **Tool life of 3.000 bores.**

BENEFIT

- **No presetting is needed.**
- **Productivity increases due to four effective cutting edges compared to one with padded reamers.**

RIR™ VALVE GUIDE MACHINING

CHALLENGE

- Valve guide bore Ø 6mm (.236“).
- Tolerance range 12 µm H7.
- Brass material, lead free.
- Concentricity of seat to guide less than 50 µm.

SOLUTION

- RIR padded reamer with PCD guide pads.
- Single edged KD1415™ PCD insert with chip breaker.

CUTTING DATA

- vc 60 m/min (197 SFM).
- f 0,14 mm/rev (.006 IPR).

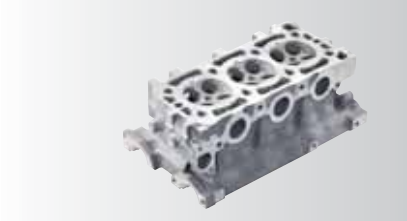
RESULT

- **Tool life of 100 bores.**
- **Surface finish Rz 6.3 µm.**

BENEFIT

- **Secure process due to very good chip control on lead free brass.**

Cylinder Head



MOTION TOOLING VALVE SEAT & GUIDE MACHINING

CHALLENGE

- Semi-finish and finish machining of primary seat angle and valve guide in one operation.
- Sinter metal.
- Transfer line with internal coolant.

SOLUTION

- Taper turning head with quill for reamer.

CUTTING DATA

- vc 271 m/min f 0,05 mm/rev valve seat.
- vc 60 m/min f 0,11 mm/rev valve guide.

RESULT

- **Run out of guide to seat 7 µm.**
- **Cylindricity of guide 12 µm.**

BENEFIT

- **Higher accuracy of valve seat angles as machining result is independent from insert wear.**
- **Time saving combination with valve guide reamer.**

Cylinder Head

Polished flutes in for
improved chip evacuation

Chipformer in carbide body

PCD STEP REAMING PCDCSC22RLE

CHALLENGE

- Valve lifter bore Ø 12mm (.472").
- Tolerance range 18 µm G7.
- Aluminium AlSi7Mg.
- Machining centre with internal coolant.

SOLUTION

- PCD tipped, carbide based reamer and counter sinker with internal coolant.
- Four effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- vc 400 m/min (1.312 SFM).
- f 0,10 mm/rev (.004 IPR).

RESULT

- **Tool life of 125.000 holes.**
- **Surface finish better than Rz 1.5 µm.**

BENEFIT

- **Secure process and very good concentricity.**

PCD STEP REAMING PCDCSC02RLE

CHALLENGE

- Injector bore Ø 7,75–19,5mm (.305–.768").
- Tolerance range 5 µm.
- Aluminium G-AlSi7Mg.
- Machining centre with internal coolant.

SOLUTION

- PCD tipped, carbide based tool with PCD guide pads at Ø 19,5mm and internal coolant.
- Two effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- vc 220 m/min (722 SFM).
- f 0,35 mm/rev (.014 IPR).

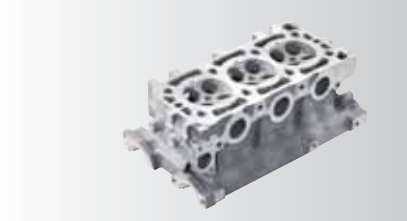
RESULT

- **Tool life of 400.000 bores.**
- **Surface finish better than Rz 3 µm.**

BENEFIT

- **Secure process due to chipformer in carbide body improving chip formation.**

Cylinder Head



RIQ pocket for indexing without adjustment

RIQ™ QUATTRO CUT™/RIR™ PADDED REAMING

CHALLENGE

- Injector bore Ø 10,3–41mm (.406–1.614").
- Tolerance range 18–25 µm H7.
- Cast iron GG25.
- Quick-change interface between first and second machining stage.

SOLUTION

- First stage: RIR reamer with RIQ profile insert.
- Second stage: RIQ padded multi step reamer.
- Radial actuated KST interface as stages have different tool life due to different diameters.

CUTTING DATA

- vc 23–90 m/min n = 700 RPM.
- f 0,32 mm/rev (.025 IPR).

RESULT

- **Tool life of 1.000 components per insert edge.**
- **Surface finish better than Rz 16 µm.**

BENEFIT

- **No back taper adjustment needed with RIQ inserts.**
- **Front and back end of tool can be handled independently.**
- **RIQ pocket seat allows insert indexing without adjustment reaching < 20 µm axial run out.**

Cylinder Head

Self aligning
padded reamer

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Oil seal bore finishing Ø 56,4mm (2.220").
- Tolerance range 30 µm H7.
- Aluminium.
- Cambore to oil seal bore self alignment.
- Transfer line with internal coolant.

SOLUTION

- RIQ padded reamer with two PCD KD1415™ full-face inserts floating on finish machined cam bore.
- Self-aligning reamer body to ensure cam bore to oil seal bore concentricity.

CUTTING DATA

- vc 326 m/min (1.070 SFM).
- f 0,32 mm/rev (.004 IPR).

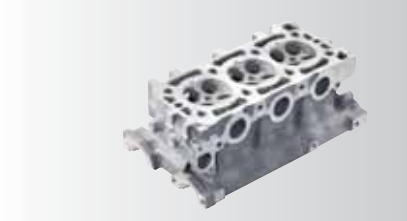
RESULT

- **Tool life of 80.000 cylinder heads.**

BENEFIT

- **No insert back taper adjustment needed.**
- **Cost savings due to four edged full face PCD RIQ insert.**

Cylinder Head



Semi finish and finish stage combined

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Cambore finishing Ø 25mm (.984").
- Tolerance range 21 µm H7.
- Aluminium.
- Deflection less than 20 µm over total length.
- Machining centre with internal coolant.

SOLUTION

- RIQ padded reamer with two PCD KD1415™ full-face inserts for semi-finishing and two PCD KD1415 full-face inserts for finishing.

CUTTING DATA

- vc 334 m/min (1.096 SFM).
- f 0,16 mm/rev (.006 IPR).

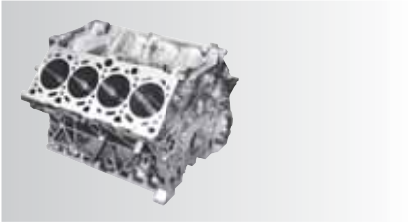
RESULT

- **Tool life of 160.000 cylinder heads.**
- **Surface finish Ra 0.3 µm.**

BENEFIT

- **No insert back taper adjustment is needed.**
- **Cost savings due to four edged full face PCD RIQ insert.**
- **Setup time reduction from 8 h with competitive tooling to less than 1/2 h with RIQ.**

Cylinder Block



Individual and simultaneous CLB adjustment

ROMICRON™ FINE BORING

CHALLENGE

- Cylinder bore Ø 78,45mm (3.089").
- Tolerance range 20 µm.
- Cast iron GG26.
- Replace low productivity reaming process.
- Machining centre HSK100 with internal coolant.

SOLUTION

- Multicron engineered solutions tool with three finishing cartridges with individual set up and automatic wear compensation with front CLB knob.
- CPGW060204S01015C KB1630.

CUTTING DATA

- vc 1.281 m/min (4.200 SFM).
- f 0,42 mm/rev (.017 IPR).

RESULT

- **Tool life of 2.000 components per setup.**
- **Cylindricity 13 µm.**
- **Surface finish Ra 2.4 µm.**

BENEFIT

- **High productivity due to three cutting edges and automatic wear compensation inside of machine.**
- **Bore tolerance range of 20 µm easily and consistently achieved due to 1 µm per click in radius adjustment executed by machine.**

Cylinder Block

CLB screw for automatic wear compensation

MOTION TOOLING

CHALLENGE

- Cylinder bore Ø 75mm (2.953").
- Cast iron GG25.
- Semi-finish and finish operation combined in one tool with coolant pressure activated finish stage.
- Machining centre with internal coolant.

SOLUTION

- Motion tool with feed out cartridges.
- Two channel coolant system with coolant supply for inserts and feed out cartridges.
- Solid CBN inserts with eight cutting edges KB1340™.

CUTTING DATA

- vc 600 m/min f 0,05 mm/rev semi-finish.
- vc 600 m/min f 0,11 mm/rev finish.

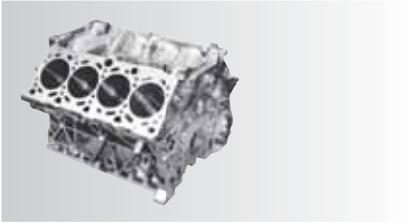
RESULT

- **Tool life of 2.000 bores per tooling setup.**
- **Cylindricity better than 8 µm.**

BENEFIT

- **Higher productivity as roughing at forward and finishing at backward movement — with coolant feed out.**
- **Finish diameter adjustable with CLB process.**
- **Improved cylindricity than two separate operations.**

Cylinder Block



Bayonet quick change system

ROMICRON™ FINE BORING

CHALLENGE

- Cylinder bore Ø 78,933mm (3.108").
- Cast iron GG25.
- Reduce setup and adjustment effort with roughing and finishing at various cylinder blocks.
- Engineered solutions vertical mill with internal coolant.

SOLUTION

- Romicron engineered solutions tool with quick-change interface and drawbar actuated finish cartridge.
- SNGN090308T00520 KY1615 roughing insert.
- CPMT09T308LF KT315™ finishing insert.

CUTTING DATA

- vc 580 m/min f 0,26 mm/rev roughing.
- vc 580 m/min f 0,19 mm/rev finishing.

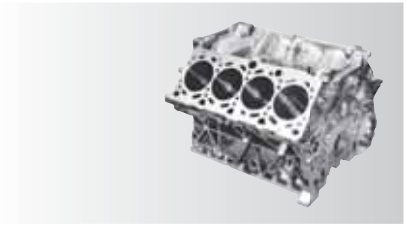
RESULT

- **Tool life of 100 components per setup.**
- **Cylindricity 13 µm.**
- **Surface finish Ra 1,5 µm.**

BENEFIT

- **Bore tolerance easily and consistently achieved due to 1 µm per click in radius adjustment.**
- **Weight reduction from 11 kg to 1,8 kg.**
- **Setup time reduction from 1,5 h to 15 min.**
- **Secure process resulting in higher cpk value.**

Cylinder Block



ROMICRON™ FINE BORING

CHALLENGE

- Piston bore Ø 68mm (2.677").
- Tolerance range 30 µm.
- Cast iron.
- Machining centre HSK100A with internal coolant.

SOLUTION

- Engineered solution SVS4B head.
- Two semi-finish and one finish cutting edge.
- TPGW110204S01015C KB1630™.

CUTTING DATA

- vc 595 m/min (1.952 SFM).
- f 0,15 mm/rev (.006 IPR).

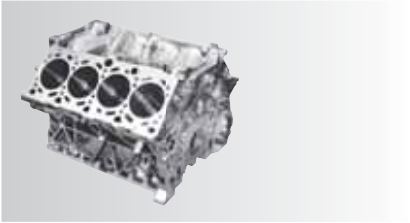
RESULT

- **Surface finish Ra 0.8 µm.**
- **Roundness better than 8 µm.**

BENEFIT

- **80% less adjustment time needed.**
- **Bore tolerance range of 30 µm easily and consistently achieved due to 1 µm per click in radius adjustment.**

Cylinder Block



ROMICRON™ FINE BORING

CHALLENGE

- Cylinder bore Ø 96,9mm (3.815").
- Tolerance range 30 µm.
- Cast iron.
- Machining centre with internal coolant.

SOLUTION

- Romicron standard KR50SVS4B094M head with engineered solution steep taper adaptor with chamfering inserts.
- CPGW060208S01015C KB1630™.

CUTTING DATA

- vc 600 m/min (1.969 SFM).
- f 0,30 mm/rev (.012 IPR).

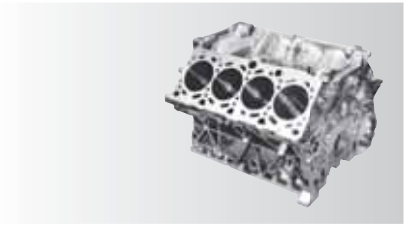
RESULT

- **Tool life of 800 components.**
- **Surface finish Ra 3 µm.**

BENEFIT

- **High productivity increase as a a result of 2x cutting speed and 40% higher feed rate compared to previous solution.**
- **Bore tolerance range of 30 µm easily and consistently achieved due to 1 µm per click in radius adjustment.**

Cylinder Block



Semi and finishing stages combined

ROMICRON™ FINE BORING

CHALLENGE

- Cylinder bore Ø 103,17mm (4.062").
- Tolerance range 50 µm.
- Cast iron.
- Semi-finish and finish operation combined.
- Machining centre HSK100A with internal coolant.

SOLUTION

- Romicron engineered solutions tool with two semi-finishing, one finishing and one chamfering cartridges.
- Automatic wear compensation with CLB.
- SCGW09T308S01015C KB1630™.

CUTTING DATA

- vc 1.000 m/min (3.281 SFM).
- f 0,25 mm/rev (.010 IPR).

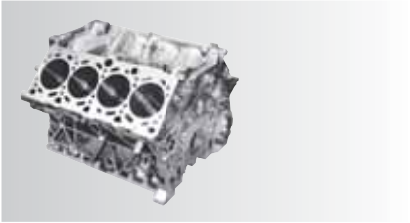
RESULT

- **Tool life of 450 components per cutting edge.**
- **Cylindricity less than 17 µm.**
- **Surface finish Ra 2.4 µm.**

BENEFIT

- **High productivity due to automatic wear compensation inside of machine.**
- **1 µm per click in radius adjustment.**

Cylinder Block



Individual
and simultaneous
CLB adjustment

ROMICRON™ FINE BORING

CHALLENGE

- Cylinder liner Ø 127,94mm (5.037").
- Cast iron GGzCrMo250.
- Increase productivity, reduce amount of constant stock for following honing process.
- Custom vertical lathe with internal coolant.

SOLUTION

- Multicron engineered solution tool with five finishing cartridges with HSK80C adaptor for facing and boring through feed-out system included.
- CPGW060204S01015C KB1630™.

CUTTING DATA

- vc 1.200 m/min (3.937 SFM).
- f 0,50 mm/rev (.020 IPR).

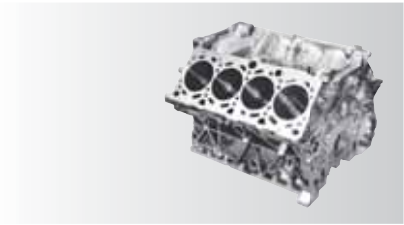
RESULT

- **Tool life of 4.000 components per setup.**
- **Cylindricity 8 µm.**
- **Surface finish Ra 2,0 µm.**

BENEFIT

- **High productivity due to five cutting edges.**
- **Bore tolerance range of 20 µm easily and consistently achieved due to 1 µm per click in radius adjustment.**

Cylinder Block



1 µm per click
in radius adjustment

ROMICRON™ FINE BORING

CHALLENGE

- Crank bore finishing Ø 60mm (2.362").
- Tolerance range 30 µm.
- Cast iron GG25.
- Reduce setup and cycle time.
- Transfer line with internal coolant.

SOLUTION

- Line boring bar with Romicron standard cartridges KRMSVS00M055M.
- Semi-finishing and finishing operations in one.
- CPGT060204LF KC5010™.

CUTTING DATA

- vc 150 m/min f 0,2 mm/rev semi finish.
- vc 150 m/min f 0,12 mm/rev finish.

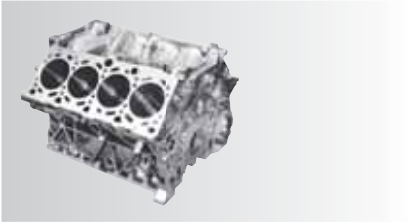
RESULT

- **Tool life of 120 components.**
- **Surface finish better than Rz 16 µm.**
- **Roundness better than 5 µm.**

BENEFIT

- **Semi-finishing operation during forward movement and finishing operation during backward movement of the workpiece.**
- **Use of standard of the shelf Romicron tooling with engineered solution line boring bar.**
- **Time saving due to low presetting effort with 1 µm per click in radius adjustment.**

Cylinder Block



Semi finish and
finish stage combined

FINE BORING

CHALLENGE

- Crank bore finishing Ø 37mm (1.457").
- Tolerance range 5 µm.
- Cast iron.
- Maintain tolerance for minimum of 50 bores.
- Machining centre with internal coolant.

SOLUTION

- Line boring bar with tool bits adjusted by differential screw for more sensitivity.
- Dynamically balanced by design with axial holes ensuring highest stiffness of tool.

CUTTING DATA

- vc 160 m/min f 0,12 mm/rev semi-finish.
- vc 160 m/min f 0,08 mm/rev finish.

RESULT

- **Customer proprietary information.**

BENEFIT

- **Use of standard C-style inserts in LF reduce tooling costs in KCK15.**
- **Reduction of cycle time.**
- **Easy and fine adjustments ensure a stable process.**

Cylinder Block

RIQ chamfering, plunging and reaming insert

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Balancing shaft bore Ø 31–39mm.
- Cast iron.
- Reaming of three diameters, machining of three chamfers and one facing operation in one tool.
- Minimum quantity lubrication MQL.

SOLUTION

- RIQ padded reamer with one effective cutting edge combining chamfering, counter sinking and reaming stage in one tool, using two reaming RIQ and one special RIQ insert.

CUTTING DATA

- vc 100 m/min (328 SFM).
- f 0,14 mm/rev (.006 IPR).

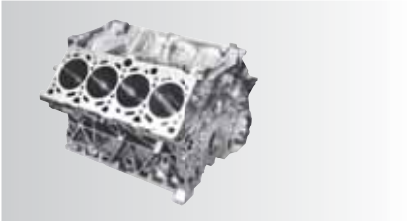
RESULT

- **Tool life of 8.000 bores per insert.**
- **Surface finish Rz 10 µm.**

BENEFIT

- **No insert back taper adjustment needed.**
- **Highest angular precision without any adjustment with RIQ at chamfering stage.**

Cylinder Block



KST pre-loaded taper face contact interface

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Dowel pin bore Ø 15,341mm (.604").
- Tolerance range 50 µm.
- Cast iron GG26Cr.
- Machining centre with internal coolant.

SOLUTION

- RIQ padded reamer with HSK interface.
- Coated carbide KC6105™ RIQ inserts with four edges.

CUTTING DATA

- vc 70 m/min (328 SFM).
- f 0,13 mm/rev (.005 IPR).

RESULT

- **Tool life of 96.000 bores per insert.**

BENEFIT

- **No insert back taper adjustment needed.**

RHM™ MODULAR REAMING

CHALLENGE

- Position bore Ø 20mm (.787").
- Tolerance range 21 µm N7.
- Cast iron GG26Cr.
- Replace padded double-edged reamer.
- Machining centre with internal coolant.

SOLUTION

- Special RHM head with six cutting edges.
- Engineered solution KC6105 TiN coated carbide grade.

CUTTING DATA

- vc 63 m/min (207 SFM).
- f 0,84 mm/rev (.033 IPR).

RESULT

- **Tool life of 336m.**

BENEFIT

- **8x higher productivity due to higher feed rate.**
- **Tool life increased by 240% when compared to previous solution.**

Conrod

ROMICRON™ FINE BORING

CHALLENGE

- Pin bore Ø 58,033mm (2.285").
- Brass.
- Combine finishing of crank and pin bore into one tool to increase productivity.
- Machining centre with internal coolant.

SOLUTION

- Romicron engineered-solution tool with two Romicron mechanism in one tool body.
- KC5010™.

CUTTING DATA

- vc 450 m/min (1.476 SFM).
- f 0,10 mm/rev (.004 IPR).

RESULT

- **Tool life of 350 pin bores per insert.**
- **Surface finish better than Ra 1,0 µm.**
- **Cylindricity 5 µm.**

BENEFIT

- **Combination tool increases productivity.**
- **Bore tolerance range of 26 µm easily and consistently achieved due to 1 µm per click in radius adjustment.**

ROMICRON™ FINE BORING

CHALLENGE

- Crank bore Ø 93,777mm (3.692").
- Steel C70.
- Combine finishing of crank and pin bore into one tool to increase productivity.
- Machining centre with internal coolant.

SOLUTION

- Romicron engineered solution tool with two Romicron mechanism in one tool body.
- KT315™.

CUTTING DATA

- vc 400 m/min (1.312 SFM).
- f 0,10 mm/rev (.004 IPR).

RESULT

- **Tool life of 260 crank bores per insert.**
- **Surface finish better than Ra 1,0 µm.**
- **Cylindricity 5 µm.**

BENEFIT

- **Combination tool increases productivity.**
- **Bore tolerance range of 26 µm easily and consistently achieved due to 1 µm per click in radius adjustment.**

The Kennametal Solution

Kennametal Global Engineered Solutions. Coordinated global resources with world-class manufacturing, process development, and implementation capabilities.

No matter how small or large your project.

- Whether it's a single tailored tool or the development of a comprehensive manufacturing process, Kennametal's team can manage the development, personnel training, and successful implementation of the complete solution.

Regardless of where you're located, Kennametal is everywhere you are.

- With Kennametal's team, you receive globally coordinated manufacturing, process development, implementation, and optimization support and key alliances with machine tool builders and other leading technology manufacturers that ensure a complete solution.

Experience the advantages at your Authorised Kennametal Distributor or at **www.kennametal.com**.

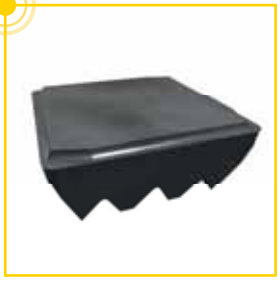
KENNAMETAL®

Conrod



RIQ cermet insert with chip former geometry

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Pin bore Ø 19mm (.748").
- Tolerance range 33 µm H8.
- Steel C70.
- Entry/exit inclined and chip control improvement.
- Transfer line with MQL internal coolant.

SOLUTION

- RIQ padded reamer with two axial staggered RIQ inserts in microfinishing setup.
- Coated cermet RIQ inserts with four edges and special chip former.

CUTTING DATA

- vc 200 m/min (328 SFM).
- f 0,20 mm/rev (.006 IPR).

RESULT

- **Tool life of more than 5.000 components per insert.**
- **Surface finish Rz 12–14 µm.**
- **Cylindricity 5 µm.**

BENEFIT

- **No insert back taper adjustment needed.**
- **High productivity increase due to higher feed rate when compared to previous fine boring tools.**
- **Very short chips improve chip evacuation.**
- **Secure process as surface requirement of Rz 8 µm to Rz 16 µm are achieved.**

Conrod

Individual and simultaneous CLB adjustment

ROMICRON™ FINE BORING

CHALLENGE

- Crank bore Ø 91,24mm (3.592").
- Steel C70.
- Increase productivity with semi-finishing and finishing operations.
- Transfer line with internal coolant.

SOLUTION

- Multicron quick-change engineered-solution tool with three semi-finishing and three finishing cartridges.
- Drawbar CLB adjustment of finishing inserts.
- SCMT09T308LF KT315™.

CUTTING DATA

- vc 230 m/min (820 SFM).
- f 0,36 mm/rev (.014 IPR).

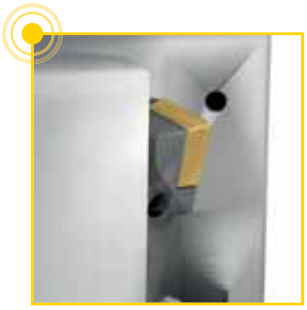
RESULT

- **Tool life of 2,320 conrods per insert.**
- **Surface finish Ra 1,0 µm.**
- **Cylindricity 2 µm.**

BENEFIT

- **High productivity due to three cutting edges.**
- **Quick-change coupling to enable individual cartridge setup at multicron finishing stage.**
- **Bore tolerance range of 22 µm easily and consistently achieved due to 1 µm per click in radius adjustment.**

Conrod



Double feed out mechanism

ROMICRON™ MOTION TOOLING

CHALLENGE

- Crank bore Ø 98,82mm (3.891").
- Tolerance range 26 µm.
- Steel C70.
- Drawbar actuated solution to semi-finish, finish, and chamfer both sides of the crank bore.

SOLUTION

- Motion tool based on Romicron with double feed out mechanism and fixed insert cartridges.
- SCMT09T308LF KC5010™.

CUTTING DATA

- vc 230 m/min (755 SFM).
- f 0,12 mm/rev (.005 IPR).

RESULT

- **Tool life of 600 conrods per insert.**
- **Surface finish Ra 1.0 µm.**
- **Cylindricity 2 µm.**

BENEFIT

- **Very stable and highly productive process as multiple operations are combined.**
- **Blue print solution for various types of conrods at customer site.**

Conrod

ROMICRON™ FINE BORING

CHALLENGE

- Pin bore Ø 16,77mm (660").
- Crank bore Ø 20,77mm (.818").
- Steel C70.
- Combines roughing, semi-finishing, and finishing operation into one tool.

SOLUTION

- Romicron standard head HSK63ASVUBB2116M with engineered-solution boring bar.
- CPMT060204LF KC5010™.

CUTTING DATA

- vc 120 m/min f 0,10 mm/rev roughing.
- vc 120 m/min f 0,05 mm/rev finishing.

RESULT

- **Tool life of 2.500 components per insert edge.**
- **Surface finish Ra 0,5 µm.**
- **Cylindricity 3 µm.**

BENEFIT

- **Productivity increase due to combination tool.**
- **Bore tolerance range of 20 µm easily and consistently achieved due to 1 µm per click in radius adjustment.**

Steering Column

Adjustable cartridge
with PCD insert

PCD COUNTERSINKING PCDCSTM03RLE

CHALLENGE

- Bore Ø 26,2; 37,6; and 44mm.
- Tolerance range 21 µm N7.
- Aluminium G-AlSi9Cu3.
- Varying depth of cut ca. 1,5mm.
- Machining centre with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with internal coolant.
- Three effective cutting teeth; KD1415™.
- Standard cartridge SCFCR08CA06 achieves required surface finish range.

CUTTING DATA

- vc 500 m/min (1.640 SFM).
- f 0,30 mm/rev (.012 IPR).

RESULT

- **Surface finish Ra 1,6–2,3 µm.**

BENEFIT

- **Secure process.**

Steering Column

PCD COUNTERSINKING PCDCSTA03RLE

CHALLENGE

- Bore Ø 17,07; 39,1; and 50,9mm.
- Tolerance range 21 µm N7.
- Aluminium G-AlSi10Mg.
- Varying depth of cut ca. 2,5mm.
- Machining centre with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Three effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- vc 600 m/min (1.969 SFM).
- f 0,30 mm/rev (0,012 IPR).

RESULT

- **Tool life of 2.000 metres.**

BENEFIT

- **Productivity increased due to higher cutting data.**

Gear Housing

PCD STEP REAMING PCDRSCA04RLE

CHALLENGE

- Bearing bore Ø 13,5 and 18mm.
- Tolerance range 18 µm H7.
- Aluminium G-AlSi10Mg.
- Varying depth of cut ca. 0,5mm.
- Machining centre with internal coolant.

SOLUTION

- PCD tipped, carbide-based tool shrinked in SIF™ steerable interface with internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- vc 230 m/min (755 SFM).
- f 0,25 mm/rev (0,010 IPR).

RESULT

- **Surface finish Ra 0,2 µm.**

BENEFIT

- **Secure process.**

Gear Housing

Adjustable PCD pocket seat

PCD COUNTERSINKING PCDCSTMJ04RLE

CHALLENGE

- Bearing bore Ø 40, 62, 85mm.
- Tolerance range 25 µm S7.
- Aluminium AlSi9Cu3.
- Machine three different diameters with one tool.
- Machining centre with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with adjustable pocket seats, SIF™ steerable interface and internal coolant.
- Four effective cutting and chamfering teeth; KD1415™.

CUTTING DATA

- vc 630–1.340 m/min n = 5.010 RPM.
- f 0,32 mm/rev (0,013 IPR).

RESULT

- **Tool life of 500 workpieces.**

BENEFIT

- **Secure process with only 1,2 sec cutting time per operation.**
- **Higher productivity due to combining three operations into one tool.**
- **Very stable process without chip control issues.**

Gear Housing

Highly uneven spacing

PCD STEP REAMING PCDRSTM06RLE

CHALLENGE

- Bearing bore Ø 130mm.
- Tolerance range 25 µm S6.
- Aluminium AlSi8Cu3.
- Varying depth of cut ca. 0,5–5mm.
- Machining centre with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with HSK interface and internal coolant.
- Six effective cutting and chamfering teeth in positive cutting position; KD1415™.

CUTTING DATA

- vc 350 m/min (1.148 SFM).
- f 0,60 mm/rev (0,024 IPR).

RESULT

- **Tool life increase versus previous solution.**
- **Surface finish Ra 0,2 µm.**

BENEFIT

- **Secure process.**

Gear Housing

PCD REAMING PCDRSTA03RLE

CHALLENGE

- Bearing bore Ø 35mm (.984").
- Tolerance range 21 µm H7.
- Aluminium G-AlSi10Mg.
- Pre-drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Three effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- vc 235 m/min (771 SFM).
- f 0,30 mm/rev (0,012 IPR).

RESULT

- **Tool life of 100.000 holes.**
- **Surface finish Ra 0,2 µm.**

BENEFIT

- **Secure process despite high L/D ratio.**
- **Very good surface quality.**

Gear Housing

PCD REAMING PCDRSC02RLE

CHALLENGE

- Index bore Ø 11,5mm (0,435").
- Tolerance range 18 µm H7.
- Aluminium G-AlSi10Mg.
- Varying depth of cut ca. 3mm.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, carbide-based tool with shrink in HSK63A adaptor with internal coolant.
- Two effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- vc 1.005 m/min (3.297 SFM).
- f 0,16 mm/rev (0,024 IPR).

RESULT

- **Tool life of 200.000 holes.**
- **Surface finish Ra 0,2 µm.**

BENEFIT

- **Secure process and very good surface quality.**
- **Very short overhang length resulting in very good stability.**

Gear Housing

PCD REAMING PCDRSTA04RLE

CHALLENGE

- Bearing bore Ø 80mm (3,150").
- Tolerance range 30 µm H7.
- Aluminium G-AlSi10Mg.
- Pre-drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Four effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- vc 400 m/min (1.312 SFM).
- f 0,32 mm/rev (0,013 IPR).

RESULT

- **Tool life of more than 30.000 components.**
- **Surface finish Ra 0,2 µm.**

BENEFIT

- **Secure process and very good surface quality.**

Gear Housing

PCD MULTI-OPERATION TOOL PCDMSTA04RLE

CHALLENGE

- Bearing bore Ø 28 and 90mm.
- Tolerance range 21 and 35 µm H7.
- Aluminium G-AlSi10Mg.
- Pre-drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with two individual adjustable SIF™ steerable interfaces and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- vc 400 m/min (1.312 SFM).
- f 0,32 mm/rev (0,013 IPR).

RESULT

- **Tool life of more than 95.000 holes.**
- **Surface finish Ra 0,2 µm.**

BENEFIT

- **Secure process and very good surface quality.**

Gear Housing

PCD STEP REAMING PCDRSTM04RLE

CHALLENGE

- Bearing bore Ø 80 and 120mm.
- Tolerance range 30 and 35 µm H7.
- Aluminium G-AlSi7Mg.
- Pre-drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with HSK63A interface and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- vc 800 m/min (2.625 SFM).
- f 0,32 mm/rev (0,013 IPR).

RESULT

- **Tool life of more than 400 min.**
- **Surface finish Ra 0,2 µm.**

BENEFIT

- **Secure process and very good surface quality.**
- **Tool life increase versus previous solution.**

Gear Housing

PCD COUNTERSINKING PCDCSTA03RLE

CHALLENGE

- Bearing bore Ø 81,25 and 90,3mm.
- Tolerance range 30 and 35 µm H7.
- Aluminium G-AlSi7Mg.
- Pre drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Three effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- vc 400 m/min (1.312 SFM).
- f 0,30 mm/rev (0,012 IPR).

RESULT

- **Tool life of 10.000 components.**
- **Surface finish Ra 0,2 µm.**

BENEFIT

- **Secure process and very good surface quality.**

Gear Housing

PCD STEP REAMING PCDRSTA03RLE

CHALLENGE

- Bearing bore Ø 17,984 and 66,037mm.
- Tolerance range 8 and 20 µm.
- Aluminium GD-AlSi7.
- Pre-drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Three effective cutting teeth.
- KD1415™.

CUTTING DATA

- vc 315 m/min f 0,24 mm/rev Ø 17,984 mm.
- vc 1.156 m/min f 0,15 mm/rev Ø 66,037 mm.

RESULT

- **Tool life of 35.000 components.**
- **Surface finish Ra 0,2 µm.**

BENEFIT

- **Secure process and very good surface quality.**
- **Achieves high concentricity and straightness.**

Gear Housing

PCD PROFILE MILLING PCDPSTM04E

CHALLENGE

- Retraining grooves Ø 60,4 and 90,7mm.
- Tolerance range 60 µm.
- Aluminium G-AlSi10Mg.
- Pre drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with HSK63A interface and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- vc 1.500 m/min (4.921 SFM).
- f 0,06 mm/rev (0,002 IPR).

RESULT

- **Tool life of 50.000 parts.**
- **Surface finish better than Ra 0,4 µm.**

BENEFIT

- **Secure process.**
- **Combining two operations in one tool increases productivity.**
- **High accuracy in the distance between the two machined grooves.**

PCD PROFILE MILLING PCDPSTM04E

CHALLENGE

- Retraining grooves Ø 58, 58,6 and 60mm.
- Tolerance range 25 µm.
- Aluminium G-AlSi10Mg.
- Pre drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel based tool with HSK63A interface and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- vc 1.500 m/min (4.921 SFM).
- f 0,06 mm/rev (0,002 IPR).

RESULT

- **Tool life of 50.000 work pieces.**
- **Surface finish better than Ra 0,2 µm.**

BENEFIT

- **Combining machining operations increases productivity.**
- **Excellent dimensional accuracy.**

Differential Housing

ROMICRON™ FINE BORING

CHALLENGE

- Bearing bores Ø 60,22 and 88,85mm.
- Tolerance range 17 µm.
- Ductile cast iron GGG50.
- Finishing, back boring, and chamfering in one tool.
- Machining centre HSK100A with internal coolant.

SOLUTION

- Dynamically balanced Romicron engineered solution.
- Individual adjustment of fine boring and back boring stages.
- CPGT060204LF KC5010™.

CUTTING DATA

- vc 200 m/min (656 SFM).
- f 0,12 mm/rev (0,005 IPR).

RESULT

- **Tool life of 240 components per insert.**
- **Surface finish Ra 1,6 µm.**

BENEFIT

- **Bore tolerance range of 17 µm easily and consistently achieved due to 1 µm per click in radius adjustment.**

Differential Housing

SPHX insert for
precise 90° shoulder

PCD STEP REAMING

CHALLENGE

- Pin bore Ø 60mm (2.362").
- Tolerance range 19 µm H6.
- Ductile cast iron GGG40.
- Finishing bore and 90° shoulder to Ø 55mm.
- Machining centre with internal coolant.

SOLUTION

- Standard Romicron KM50SVS2B107M head with engineered solution cartridge.
- SPHX060204R21 KC7215™ standard double-edged countersinking insert.

CUTTING DATA

- vc 180 m/min (590 SFM).
- f 0,05 mm/rev (0,002 IPR).

RESULT

- **Tool life of 4.000 components per insert.**
- **Surface finish Ra 1,6 µm.**

BENEFIT

- **All requirements regarding perpendicularity achieved.**
- **Bore tolerance range of 19 µm easily and consistently achieved due to 1 µm per click in radius adjustment.**

Differential Housing

Adjustable pocket seat

PCD STEP REAMING PCDRSTA04RLE

CHALLENGE

- Bore Ø 40 and 55mm (1,575 and 2,165").
- Tolerance range 30 µm R7.
- Aluminium GD-AlSi10Mg.
- Fine boring two diameters with one tool.
- Machining centre with internal coolant.

SOLUTION

- PCD steel-based fine boring tool with four effective cutting edges, adjustable pocket seats at Ø 55mm, SIF™ steerable interface, and internal coolant.
- CCMT060202 KM™one uncoated carbide.

CUTTING DATA

- vc 340 and 520 m/min n = 3.000 RPM.
- f 0,60 mm/rev (0,024 IPR).

RESULT

- **Tool life of more than 15.000 components per insert.**
- **Surface finish Rz 10–12 µm.**
- **Cylindricity better than 20 µm.**

BENEFIT

- **All requirements regarding perpendicularity, roundness, and surface quality between Rz 8 µm and Rz 16 µm continuously achieved.**
- **Higher productivity due to combining three operations in one tool.**

Water Pump Housing

PCD COUNTERSINKING PCDCSTA03RLE

CHALLENGE

- Bore positions of Ø 21 and 24mm (0,827 and 0,945").
- Tolerance range 13 and 33 µm.
- Aluminium AlSi9Cu3.
- Pre drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with adjustable pocket seats, SIF™ steerable interface and internal coolant.
- Four effective cutting teeth; KD1415™.

CUTTING DATA

- vc 600 m/min (1.969 SFM).
- f 0,12 mm/rev (0,005 IPR).

RESULT

- **Tool life of 80000 components.**
- **Surface finish Rz 0,8 µm with Ø 21mm and Rz 12 µm with Ø 24mm.**

BENEFIT

- **All requirements regarding perpendicularity, roundness, and surface quality between Rz 8 µm and Rz 15 µm at Ø 24mm are continuously achieved.**

Water Pump Housing

PCD MULTI-OPERATION TOOL PCDMSC02CCE

CHALLENGE

- Position bore Ø 7,9mm (0,311").
- Tolerance range 22 µm H8.
- Aluminium AlSi9Cu3.
- Combine drilling, back chamfering, and facing.
- Machining centre BT40 with internal coolant.

SOLUTION

- Solid carbide, PCD tipped, steel-based tool with back chamfering capability and internal coolant.
- Two effective cutting teeth.
- KD1415™.

CUTTING DATA

- vc 350 m/min (1.148 SFM).
- f 0,20 mm/rev (0,008 IPR).

RESULT

- **Tool life of 50.000 components.**
- **Surface finish Rz 0,8 µm.**

BENEFIT

- **Higher productivity due to combining three operations in one tool.**

Water Pump Housing

PCD STEP REAMING PCDRSTM04RLE

CHALLENGE

- Bearing bores Ø 10,14–18,45mm.
- Tolerance range 3–10 µm.
- Aluminium GD-AlSi9Cu3.
- Pre-casted hole with 0,3mm depth of cut.
- Machining centre HSK32A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with adjustable pocket seats, SIF™ steerable interface and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- vc 89–162 m/min n = 2800 RPM.
- f 0,4 mm/rev (0,015 IPR).

RESULT

- **Tool life of 40.000 components.**
- **Surface finish Rz 0,8 µm.**

BENEFIT

- **The quality criterion with an exact alignment of rightness, concentricity, and a high value of surface quality was reached.**

Water Pump Housing

PCD END MILLING PCDESTM05E

CHALLENGE

- Face milling of connection face Ø 32mm.
- Aluminium AlSi10Mg.
- Casted face with 2,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based end mill with HSK63A interface and internal coolant.
- Five effective cutting teeth.
- KD1415™.

CUTTING DATA

- vc 1.005 m/min (3.294 SFM).
- f 0,06 mm/rev (0,002 IPR).

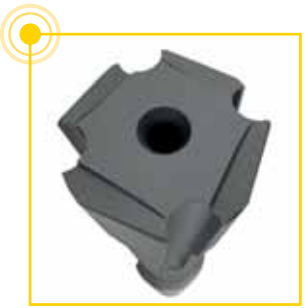
RESULT

- **Tool life of 3.000 min.**
- **Surface finish Ra 0,3 µm.**

BENEFIT

- **Very low burr formation.**

Planetary Gear Carrier



Chip control geometry

RMS™ MULTIFLUTE REAMING

CHALLENGE

- Bearing bores Ø 8,8mm (.346").
- Tolerance range 9 µm M6.
- Steel 42CrMo4 and 31CrMoV9.
- Increase tool life with long chipping material.
- Machining centre with internal coolant.

SOLUTION

- RMS engineered-solution reamer with four effective cutting edges, internal coolant hole, and coolant channels at shank.
- KC6305™ TiAlN coated carbide.

CUTTING DATA

- vc 70 m/min (230 SFM.).
- f 0,30 mm/rev (0,012 IPR).

RESULT

- **Tool life of 300 components.**
- **Surface finish Rz 1,0–2,0 µm.**

BENEFIT

- **All requirements regarding perpendicularity, roundness, and surface quality below Rz 4 µm are continuously achieved.**

Planetary Gear Carrier

ROMICRON™ FINE BORING

CHALLENGE

- Bearing bores Ø 35 and 36,5mm.
- Tolerance range 20 µm.
- Steel 20MnCr5.
- Replace padded step reamer.
- Machining centre with internal coolant.

SOLUTION

- Romicron standard heads KR32SVS0B93M and HSK63ASVS0B117M.
- CCMT06020411 KT315™ cermet insert.

CUTTING DATA

- vc 290 m/min (230 SFM).
- f 0,10 mm/rev (0,012 IPR).

RESULT

- **Surface finish better than Ra 1,0 µm.**
- **Cylindricity better than 5 µm.**

BENEFIT

- **More than 25% reduction in machining time.**
- **Removing setup of padded reamer outside of the machine results in increased up time.**
- **Bore tolerance range of 20 µm easily and consistently achieved due to 1 µm per click in radius adjustment.**

Planetary Gear Carrier

Padded reaming pin machining

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Bearing pin machining Ø 45mm (1.772").
- Tolerance range 16 µm k6.
- Ductile cast iron GGG40.
- Surface quality of Rmax 10 µm to achieve.
- Special dimensional accuracy requirement.

SOLUTION

- RIQ padded reamer with SIF™ steerable tooling interface and special gashing for external coolant supply.
- Balanced by design and fine balanced.

CUTTING DATA

- vc 105 m/min (344 SFM).
- f 0,06 mm/rev (0,002 IPR).

RESULT

- **Surface finish better than Rz 2,5 µm.**
- **Roundness 3 µm.**
- **Cylindricity 6 µm.**

BENEFIT

- **No insert back taper adjustment needed.**
- **Faster setup and less scrap.**

Brake Caliper

RMB™ MULTIFLUTE REAMING

CHALLENGE

- Main bore Ø 54mm (2,126").
- Tolerance range 50 µm.
- Cast iron.
- Machining centre BT50 with internal coolant.

SOLUTION

- UpSharp engineered-solution carbide tipped reamer with 12 cutting edges, clamped in standard Shrink Fit holder.
- TICN coated carbide.

CUTTING DATA

- vc 90 m/min (295 SFM).
- f 1,21 mm/rev (0,048 IPR).

RESULT

- **Tool life of 1.500–2.000 components.**
- **Surface finish Ra 2–2,4 µm.**

BENEFIT

- **Rigid design enables high feed rates increasing productivity.**
- **Reduces setup effort by using standard tooling with Shrink Fit adaptor.**
- **Regrindable up to 5x.**

Brake Caliper

RMS™ MULTIFLUTE REAMING

CHALLENGE

- Pin hole Ø 12mm (0,472").
- Tolerance range 30 µm.
- Cast iron.
- Machining centre HSK63A with internal coolant.

SOLUTION

- UpSharp engineered-solution solid carbide reamer with six cutting edges.
- TICN coated carbide.

CUTTING DATA

- vc 75 m/min (246 SFM).
- f 0,8 mm/rev (0,031 IPR).

RESULT

- **Tool life of 5.000 holes.**
- **Surface finish Ra 1,0 µm.**

BENEFIT

- **Productivity increase.**
- **Longer tool life than competition.**
- **Ease of use due to shrink technology.**

Brake Caliper

RIR™ PADDED REAMING

CHALLENGE

- Main bore Ø 60mm (2,362").
- Tolerance range 46 µm H8.
- Cast iron.
- Obsolete honing process and produce undercut in the caliper bore.

SOLUTION

- RIR padded reamer with end cutting radius profile insert.
- Coated carbide RIR insert with two edges.
- KC6305™.

CUTTING DATA

- vc 70 m/min (230 SFM).
- f 0,12 mm/rev (0,005 IPR).

RESULT

- **Tool life of 800 components per insert.**
- **Surface finish better than Ra 1,6 µm.**

BENEFIT

- **Bore tolerance range of 46 µm easily and consistently achieved.**
- **Cuts cost by eliminating honing and additional undercut operations.**

Brake Caliper

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Main bore Ø 54,02mm (2,127").
- Tolerance range 40 µm.
- Cast iron GGG.
- Reduce setup time and cost per part.

SOLUTION

- RIQ padded reamer with customer specific shank.
- Coated carbide RIQ insert with four edges.
- KC6305™.

CUTTING DATA

- vc 80 m/min (262 SFM).
- f 0,40 mm/rev (0,016 IPR).

RESULT

- **Tool life of 16.000 bores per insert.**
- **Surface finish better than Ra 1,6 µm.**

BENEFIT

- **No insert back taper adjustment needed.**
- **High cost savings due to more than 100% increase in tool life.**

Brake Caliper

PCD REAMING PCDRSTM04RLE

CHALLENGE

- Main bore Ø 42mm (1,654").
- Tolerance range 8 µm.
- Aluminium.
- Varying depth of cut between 1–2mm.
- Machining centre with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with HSK63A interface and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- vc 500 m/min (1.640 SFM).
- f 1 mm/rev (0,039 IPR).

RESULT

- **Tool life of 400.000–600.000 bores.**
- **Surface finish better than Ra 1,6 µm.**

BENEFIT

- **Secure process and high tool life.**
- **Productivity increase compared to previous solution.**

Brake Caliper

Producing two different diameter

RMB™ MULTIFLUTE REAMING

CHALLENGE

- Location holes Ø 39 and 40mm.
- Tolerance range 39 µm H8.
- Cast iron GGG60.
- Produce both diameters with one tool.
- Machining centre with internal coolant.

SOLUTION

- RMB engineered-solution carbide tipped reamer with 10 teeth and internal coolant supply.
- KC6305™ TiAlN coated carbide.

CUTTING DATA

- vc 70 m/min (230 SFM).
- f 3,30 mm/rev (0,130 IPR).

RESULT

- **Tool life of 5.000 holes.**
- **Surface finish Rz 20 µm better than required Rz 25 µm.**

BENEFIT

- **Very stable and highly productive process as multiple operations are combined at very high cutting data.**

Brake Master Cylinder

RIQ PCD insert with chip former geometry

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Piston bore Ø 25,431mm (1,001").
- Tolerance range 10 µm.
- Aluminium AlSi7.
- Combine multiflute and padded reaming process.
- Round table machine with internal coolant.

SOLUTION

- RIQ padded reamer in angular micro finishing setup with semi- and fine-finishing inserts.
- RIQ full face PCD KD1415™ as finishing insert.

CUTTING DATA

- vc 360 m/min (1.181 SFM).
- f 0,24 mm/rev (0,009 IPR).

RESULT

- **Tool life of 1.600 bores per insert.**
- **Surface finish better than Ra 0,4 µm.**
- **Cylindricity 7 µm.**

BENEFIT

- **No insert back taper adjustment needed.**
- **Higher productivity due to combining two operations in one tool and increasing feed by more than 30%.**
- **Very stable process without chip control issues.**
- **Better cylindricity than requested.**

Brake Master Cylinder

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Piston bore Ø 25,431mm (1,001").
- Tolerance range 10 µm.
- Ductile cast iron.
- Replace honing process with reaming.
- Machining centre with internal coolant.

SOLUTION

- RIQ padded reamer in angular micro-finishing setup with semi- and fine-finishing insert.
- RIQ full face PCD KD1415™ as finishing insert.

CUTTING DATA

- vc 120 m/min (394 SFM).
- f 0,20 mm/rev (0,008 IPR).

RESULT

- **Tool life of 1.600 bores per insert.**
- **Surface finish better than Ra 0,4 µm.**
- **Cylindricity 6 µm.**

BENEFIT

- **No insert back taper adjustment needed.**
- **Higher productivity due to combining two operations in one tool.**

The SPEED to EXCEED

Solid Carbide Taps

The Kennametal Solid Carbide Taps deliver the accuracy you demand at up to four times the speed of HSS taps. Longer tool life, exceptional thread quality, and an array of sizes for ferrous and non-ferrous materials make our taps the most trusted and productive tools in the industry.

- Reduce your operating cost by up to 65%.
- Workpiece-specific grades: KC7542™ for steels and cast irons, KC7512™ for aluminium.
- Go 4x faster with 4x the service life of conventional HSS offerings.
- Wide array of styles and sizes for through or blind hole applications.

Tap into something great at your Authorised Kennametal Distributor or at **www.kennametal.com**.

www.kennametal.com.

KENNAMETAL®

Steering Knuckle

ROMICRON™ FINE BORING

CHALLENGE

- Main bearing bore Ø 82mm (3,228").
- Replace setup of padded reamer and cover various diameters with one tool.
- Machining centre with internal coolant.

SOLUTION

- Romicron engineered solution. HSK80ASVSB156M SVS4B head.
- CPMT 060204 FW KCK20™.

CUTTING DATA

- vc 400 m/min (1.312 SFM).
- f 0,20 mm/rev (0,008 IPR).

RESULT

- **Tool life of 1.000 components.**
- **Surface finish 1,2 µm.**
- **Cylindricity better than 6 µm.**

BENEFIT

- **Reduce setup time and cost reduction when standard inserts are used.**
- **Bore tolerance range of 30 µm easily and consistently achieved due to 1 µm per click in radius adjustment.**

Steering Knuckle

Very uneven spacing

RMB™ MULTIFLUTE REAMING

CHALLENGE

- Axle arm Ø 52,935mm (2,084").
- Tolerance range 20 µm.
- Steel St52-3 and 30MnVS6.
- Surface finish and chip control improvements.
- Machining centre with internal coolant.

SOLUTION

- RMB engineered-solution cermet tipped reamer with wide chip flutes.
- 6° left hand helix and special lead geometry.
- KT6215™ TiAlN coated cermet.

CUTTING DATA

- vc 20 m/min f 2 mm/rev entering hole.
- vc 90 m/min f 2 mm/rev finish hole.

RESULT

- **Tool life of 460 components.**
- **Surface finish Rz 1,3 µm.**

BENEFIT

- **More than 30% increase in tool life compared to previous competitive tooling.**
- **Surface finish Rz 1,3 µm better than requested Rz 6,3 µm.**

Suspension Subframe

RIR™ PADDED REAMING

CHALLENGE

- Location hole Ø 18,5–23,0mm (0,728–0,906").
- Tolerance range 0,1°.
- Steel.
- Improvement in roundness and angularity.
- Transfer line with internal coolant.

SOLUTION

- RIR taper reamer with HSK interface.
- R904S00771 KC6005™ with two edges.

CUTTING DATA

- vc 32 m/min (105 SFM).
- f 0,133 mm/rev (0,005 IPR).

RESULT

- **Tool life of 800 bores per insert.**
- **Surface finish Ra 1,6 µm.**

BENEFIT

- **Predictable performance and cost savings because inserts can be reconditioned.**
- **Easy to set with three clock padded reamer setting fixtures.**
- **Roundness improvement over competitive solid carbide multiflute reamer.**

Mounting Lever

PCD COUNTERSINKING PCDCSTM04RLE

CHALLENGE

- Reaming pre-casted hole Ø 20mm (0,787").
- Tolerance range 21 µm H7.
- Aluminium AlSi9Cu3.
- 220mm over hang due to workpiece fixture.
- Machining centre with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with HSK63A interface and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- vc 125 m/min (410 SFM).
- f 0,70 mm/rev (0,003 IPR).

RESULT

- **Tool life of 60.000 components.**
- **Surface finish Ra 0,2 µm.**

BENEFIT

- **Secure process and less scrap than previous competitive solution.**
- **No adjustment effort due to solid solution.**

CV Joint

ROMICRON™ FINE BORING

CHALLENGE

- Central bore Ø 28mm (1,102").
- Tolerance range 18 µm.
- Steel, hardened.
- Material hardness 61–70 HRC.
- Machining centre with MQL internal coolant.

SOLUTION

- Romicron standard head HSK63ASVS00B096M.
- CPGW060208S01015M KB5625™.

CUTTING DATA

- vc 110 m/min (361 SFM).
- f 0,08 mm/rev (0,003 IPR).

RESULT

- **Tool life of 500 bores per insert.**
- **Surface finish Ra 0,3 µm.**

BENEFIT

- **Fine adjustments increases productivity resulting in less manufacturing interruptions.**
- **Bore tolerance range of 18 µm easily and consistently achieved due to 1 µm per click in radius adjustment.**

Turbo Charger

RIR™ PADDED REAMING

CHALLENGE

- Bearing bore Ø 9,6mm (0,378").
- Tolerance range 9 µm H6.
- Cast iron.
- Interrupted cut.
- Lathe with internal coolant.

SOLUTION

- RIR padded reamer in floating toolholder.
- RIR01E1300 KC6005™ coated carbide insert.

CUTTING DATA

- vc 50 m/min (164 SFM).
- f 0,33 mm/rev (0,013 IPR).

RESULT

- **Surface finish better than Rz 16 µm.**
- **Cylindricity 10 µm.**

BENEFIT

- **Increased productivity due to 2x the feed rate when compared to previous competitive tool.**

Turbo Charger

RMS™ MULTIFLUTE REAMING

CHALLENGE

- Mounting holes Ø 12mm (0,472").
- Tolerance range 18 µm H7.
- Ductile cast iron.
- Machining centre with internal coolant.

SOLUTION

- RMS standard reamer with six effective cutting edges and internal coolant.
- KC6305™ TiAlN coated carbide.

CUTTING DATA

- vc 20 m/min (66 SFM).
- f 0,30 mm/rev (0,012 IPR).

RESULT

- **Tool life of 1.000 components.**
- **Surface finish better than Rz 10 µm.**

BENEFIT

- **Productivity and tool life increase compared to previous solution.**

Compressor

ROMICRON™ FINE BORING

CHALLENGE

- Piston bore Ø 23,5mm (0,925").
- Tolerance range 18 µm.
- Aluminium 12% Si.
- Machining centre BT40 with external coolant.

SOLUTION

- Standard SVUBB2 head with KR coupling.
- Standard steel boring bar.
- CPGW060204FST KD1400™.

CUTTING DATA

- vc 367 m/min (1.204 SFM).
- f 0,07 mm/rev (0,003 IPR).

RESULT

- **Surface finish Ra 0,6 µm.**
- **Roundness better than 5 µm.**

BENEFIT

- **2x the productivity compared to the current solution.**
- **80% less adjustment time needed.**
- **Bore tolerance range of 18 µm easily and consistently achieved due to 1 µm per click in radius adjustment.**

Compressor

ROMICRON™ FINE BORING

CHALLENGE

- Piston bore Ø 25mm (0,984").
- Tolerance range 21 µm.
- Aluminium 15% Si.
- Machining centre BT40 with external coolant.

SOLUTION

- Engineered-solution SVS00B head with straight shank clamped in hydraulic chuck.
- CPGW060204FST KD1425™.

CUTTING DATA

- vc 391 m/min (1.283 SFM).
- f 0,20 mm/rev (0,008 IPR).

RESULT

- **Surface finish better than Ra 2,0 µm.**
- **Roundness better than 20 µm.**

BENEFIT

- **More than 60% reduction in machining time.**
- **80% less adjustment time needed.**
- **Amortisation in less than two months.**
- **Bore tolerance range of 21 µm easily and consistently achieved due to 1 µm per click in radius adjustment.**

Compressor

Polished flutes improving chip evacuation

PCD COUNTERSINKING PCDCSC22RLE

CHALLENGE

- Bearing hole Ø 12–31mm (0,472–1,220").
- Tolerance range 50 µm.
- Aluminium G-AlSi12.
- Machining centre HSK40 with internal coolant.

SOLUTION

- PCD tipped, carbide-based tool with four guiding lands, flat-bottom drilling point and internal coolant.
- Two effective cutting and chamfering teeth; KD1415™.

CUTTING DATA

- vc 440 m/min (1.444 SFM).
- f 0,20 mm/rev (0,008 IPR).

RESULT

- **Surface finish Rz 1–2 µm.**
- **Roundness better than 5 µm.**

BENEFIT

- **Productivity increases due to combining different tools in one.**
- **Tool life increase versus previous solution.**

Compressor

KST pre-loaded taper face contact interface

RHM MODULAR REAMING

CHALLENGE

- Piston bore Ø 23,5mm (1,220").
- Tolerance range 10 µm.
- Cast iron GGG60.
- Machining centre HSK63 with internal coolant.

SOLUTION

- RHM modular reamer with six cutting edges.
- KT325™ uncoated cermet.
- Standard lead geometry.
- SIF™ steerable tooling.

CUTTING DATA

- vc 125 m/min (410 SFM).
- f 0,75 mm/rev (0,030 IPR).

RESULT

- **Surface finish better than Rz 4 µm.**

BENEFIT

- **Higher productivity than single-edged padded reamer.**

Hydraulic Valve Block

RIR™ PADDED REAMING

CHALLENGE

- Spool bore Ø 18,5mm (0,728").
- Tolerance range 10 µm.
- Cast iron.
- Up to 4mm varying depth of cut.
- Machining centre with internal coolant.

SOLUTION

- RIR padded reamer with up to 100mm long cermet guide pads.
- Engineered solution RIR insert with modified chipformer.

CUTTING DATA

- vc 70 m/min (230 SFM).
- f 0,125 mm/rev (0,005 IPR).

RESULT

- **Tool life of 400 min per double-edged insert.**
- **Roundness and straightness within 10 µm.**

BENEFIT

- **Very stable process control and predictable performance.**

Hydraulic Valve Block

RMS™ MULTIFLUTE REAMING

CHALLENGE

- Rinse slider bore Ø 9,534mm (0,375").
- Tolerance range 6 µm.
- Ductile cast iron 0.7060.
- Three interrupted cuts at a reaming depth of 100mm.
- Special dimensional accuracy requirement.

SOLUTION

- RMS solid carbide reamer engineered solution.
- Special back taper configuration and support margins lands.
- KC6305™ TiAlN coated carbide.

CUTTING DATA

- vc 150 m/min (492 SFM).
- f 0,72 mm/rev (0,028 IPR).

RESULT

- **Tool life of 500 pieces.**

BENEFIT

- **Speed and feed rates are almost 30x faster resulting in higher productivity.**
- **Less scrap due to consistent accuracy.**

Hydraulic Valve Block

PCD COUNTERSINKING PCDCSC02RLE

CHALLENGE

- Thread core hole Ø 24mm (0,945").
- Tolerance range 21 µm F7.
- Aluminium AlSi9Cu3.
- Pre-drilled hole.
- Machining centre DV40 with internal coolant.

SOLUTION

- PCD tipped, carbide-based tool with internal coolant.
- Two effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

• vc	360–750 m/min	n = 7.500 RPM.
• f	0,20 mm/rev	(0,008 IPR).

RESULT

- **Tool life of 100.000 holes.**
- **Surface finish Ra 0,1 µm.**

BENEFIT

- **Productivity increase due to combining two operations into one.**
- **Carbide base increases tool life and accuracy.**

ABS Valve Block

PCD COUNTERSINKING PCDCSTA02RLE

CHALLENGE

- Bearing bores Ø 20,99 and 24,275mm.
- Tolerance range 20 µm.
- Aluminium AlSi1.
- Pre-casted hole with 0,15mm depth of cut.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Two effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- vc 300 m/min (984 SFM).
- f 0,35 mm/rev (0,014 IPR).

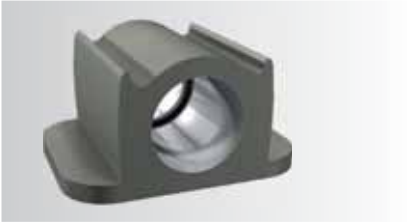
RESULT

- **Tool life of 150.000 components.**
- **Surface finish Ra 0,4–0,6 µm.**

BENEFIT

- **Very stable process control and predictable performance.**
- **Very favourable chip creation.**

Bearing Seat



KST pre-loaded taper face contact interface

RHM™ MODULAR REAMING

CHALLENGE

- Reaming Ø 35mm (1,378").
- Tolerance range 20 µm.
- Carbon steel, annealed, long-chipping.
- Blind hole limiting chip evacuation.
- Machining centre with internal coolant.

SOLUTION

- RHM modular reamer with eight cutting edges.
- KT325™ uncoated cermet.
- Standard lead geometry.
- Short engineered-solution axial clamping tool body.

CUTTING DATA

- vc 120 m/min (394 SFM).
- f 1,18 mm/rev (0,046 IPR).

RESULT

- **Tool life of 145.000 holes.**
- **Surface finish better than Rz 6,3 µm.**

BENEFIT

- **Predictable tool life as only 2 µm diameter deviation after 10.000 holes.**

Bearing Seat

RIQ single adjustment screw setup

FB easy to setup fine-boring cartridges

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Reaming Ø 47mm (1,850").
- Tolerance range 19 µm N6.
- Aluminium AlSi9Cu3.
- Machine four different diameters, two spot faces, and four different chamfers with one tool.

SOLUTION

- RIQ padded reamer with full-face PCD KD1415™ insert having four cutting edges.
- SIF™ steerable interface between reaming and fine boring section.

CUTTING DATA

- vc 236 m/min (774 SFM).
- f 0,08 mm/rev (0,003 IPR).

RESULT

- **Surface finish better than Rz 16 µm.**

BENEFIT

- **No insert back taper adjustment needed.**
- **Less operations increase productivity.**
- **Higher accuracy than multiple operations.**
- **Full-face PCD inserts reduce cost per hole.**

FB CARTRIDGE FINEBORING

CHALLENGE

- Reaming Ø 144mm (5,669").
- Tolerance range 40 µm H7.
- Aluminium AlSi9Cu3.
- Machine two different diameters.

SOLUTION

- Standard FB fine-boring cartridges with almost back lash free fine adjustment.
- CCGW060204 KD1415™.

CUTTING DATA

- vc 723 m/min (2.372 SFM).
- f 0,08 mm/rev (0,003 IPR).

RESULT

- **Surface finish better than Rz 16 µm.**

BENEFIT

- **Radial adjustment does not influence axial adjustment of inserts resulting in faster setup.**
- **Productivity increase with less operations.**
- **More accurate than previous solution.**

Heat Exchanger Plates

KST pre-loaded taper face contact interface

RHM™ MODULAR REAMING

CHALLENGE

- Tube holes Ø 25,25mm (0,994").
- Tolerance range 21 µm H7.
- Stainless Steel 304L.
- Machining centre with external coolant.

SOLUTION

- Special RHM head with six cutting edges.
- KC6305™ TiAlN coated carbide.
- Standard tool body with SIF™ steerable backend.

CUTTING DATA

- vc 36 m/min (118 SFM).
- f 0,79 mm/rev (0,031 IPR).

RESULT

- **Tool life of 167 m.**

BENEFIT

- **Higher productivity as a result of a 50% higher feed rate and 2x speed.**
- **200% more tool life than previous competitive solution.**

RHM™ MODULAR REAMING

CHALLENGE

- Tube holes Ø 25,25mm (0,994").
- Tolerance range 100 µm.
- Alloy steel, long-chipping.
- Machining centre with internal coolant.

SOLUTION

- Special RHM head with six cutting edges.
- KT6215™ TiAlN coated cermet.
- Standard 5xD body clamped into hydraulic chuck.
- KSEM HPGM used for drilling into solid.

CUTTING DATA

- vc 90 m/min (295 SFM).
- f 0,48 mm/rev (0,019 IPR).

RESULT

- **After more than 30 minutes, only minor wear is visible.**

BENEFIT

- **Reduced machining time to less than 60 min per 180 holes.**
- **Predictable tool life as only 2 µm diameter deviation after 30 minutes.**

Heat Exchanger Plates

KST pre-loaded taper face contact interface

RHM™ MODULAR REAMING

CHALLENGE

- Tube holes Ø 25,25mm (0,994").
- Tolerance range 21 µm H7.
- Steel, annealed, long-chipping.
- Replace HSS shot core drilling.
- Machining centre with internal coolant.

SOLUTION

- Special RHM head with six cutting edges.
- KT325™ uncoated cermet.
- Standard 5 x D body clamped into hydraulic chuck.

CUTTING DATA

- vc 84 m/min (276 SFM).
- f 0,49 mm/rev (0,019 IPR).

RESULT

- **Tool life of 189 m.**

BENEFIT

- **10x faster when compared to previous competitive core drilling solution.**
- **16x higher tool life.**

RHM™ MODULAR REAMING

CHALLENGE

- Tube holes Ø 32mm (1,260").
- Tolerance range 25 µm H7.
- Low alloy steel, annealed.
- Interrupted cut.
- Machining centre with internal coolant.

SOLUTION

- Standard RHM head with eight cutting edges.
- KC6305™ TiAlN coated carbide.
- Standard 5 x D body clamped into hydraulic chuck.
- KSEM HPGM used for drilling into solid.

CUTTING DATA

- vc 60 m/min (197 SFM).
- f 1,12 mm/rev (0,044 IPR).

RESULT

- **Tool life of 624 holes.**

BENEFIT

- **Almost 29% productivity increase.**
- **Close to 25% overall cost reduction due to higher tool life and higher cutting data.**

Pump Housing

Full-face PCD insert with chipformer geometry

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Piston bore Ø 18,5mm (0,728").
- Tolerance range 21 µm H7.
- Aluminium.
- Heavy interrupted cut and surface finish Rz 6,3.
- Machining centre with internal coolant.

SOLUTION

- RIQ padded reamer with helical chip flute and helical solid carbide guide pad.
- Full-face KD1415™ insert having four cutting edges.
- Positive wiper insert geometry.

CUTTING DATA

- vc 230 m/min (755 SFM).
- f 0,15 mm/rev (0,006 IPR).

RESULT

- **No chip evacuation issues.**
- **No burr, marks, or scratches at entrance or exit of interruptions.**

BENEFIT

- **No insert back taper adjustment needed.**
- **Half cycle time compared to previous competitive tooling.**

Hydraulic Pump

RIR™ PADDED REAMING

CHALLENGE

- Piston bore Ø 9,365mm (0,369").
- Tolerance range 10 µm.
- Ductile cast iron GGG40.
- Machining centre with internal coolant.

SOLUTION

- RIR padded reamer with cermet guide pads.
- R901EGS06F AlTiN coated carbide.

CUTTING DATA

- vc 53 m/min (174 SFM).
- f 0,043 mm/rev (0,002 IPR).

RESULT

- **294 bores per double-edged insert.**
- **Surface finish Ra 0,8 µm.**

BENEFIT

- **200% tool life increase.**
- **More than 10% reduction in cycle time.**
- **Consistent quality and stable process due to better chip formation.**
- **Tolerance achieved was a 50% improvement compared to the previous competitive solution.**

Valve Housing

ROMICRON™ FINE BORING

CHALLENGE

- Various bore Ø 170–480mm (6,7–18,9").
- Tolerance range 75 µm.
- Cast iron GG25.
- Automated wear compensation at interrupted cut.
- Machining centre HSK100 with internal coolant.

SOLUTION

- Semi-standard SVU120 CLB head with engineered-solution diameter extender and automatic wear compensation with CLB.
- CPGW09T308S01015C KB1630™.

CUTTING DATA

- vc 800 m/min (2.625 SFM).
- f 0,12 mm/rev (0,005 IPR).

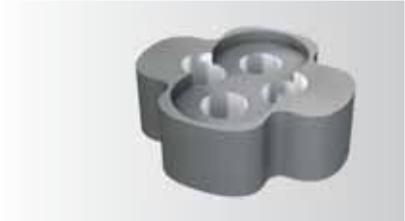
RESULT

- **Tool life of 1.200 minutes per insert.**
- **Surface finish better than Rz 16 µm.**

BENEFIT

- **More than 30% reduction in manufacturing lead time.**
- **Third shift and weekend without operators.**
- **1 µm per click in radius adjustment executed by machine.**

Pump Housing



ROMICRON™ FINE BORING

CHALLENGE

- Bore Ø 38,1mm (1,500").
- Tolerance range 18 µm.
- Cast iron.
- Interrupted cut at figure eight hole.

SOLUTION

- Romicron KM50SVS0B103M standard head.
- CPGW2151S0415C KB1645™.

CUTTING DATA

- vc 197 m/min (646 SFM).
- f 0,05 mm/rev (0,002 IPR).

RESULT

- **Tool life of 450 workpieces.**
- **Surface finish better than Ra 32 µm.**
- **Roundness better than 8 µm.**

BENEFIT

- **Secure finishing process with no oversized bores.**
- **Less adjustment effort.**
- **Amortisation in less than four months.**
- **Bore tolerance range of 18 µm easily and consistently achieved due to 1 µm per click in radius adjustment.**

Wind Energy Housing

Multiple boring heads based on KM63™ shank

KM™ FINE BORING

CHALLENGE

- Bearing seat Ø 2.700mm (106,3").
- Tolerance range 210 µm H7.
- Cast iron GGG40.
- Pull machining – spindle needs to adapt bridge inside workpiece.

SOLUTION

- Welded space frame bridge with KM coupling to adapt cutting units.
- One base bridge to adapt roughing, semi-finish and fine finish head.

CUTTING DATA

- vc 240 m/min (787 SFM).
- f 0,28 mm/rev (0,011 IPR).

RESULT

- **Customer proprietary information.**

BENEFIT

- **Machining in one workpiece results in a productivity increase.**
- **Investment saving as only one base bridge needed.**
- **Ease of use due to KM coupling for fast and accurate cutting unit change.**

Wind Energy Housing

Multiple boring heads
based on KM63™ shank

KM™ FINE BORING

CHALLENGE

- Bearing seat Ø 3000mm (118,1").
- Tolerance range 210 µm H7.
- Ductile cast iron GGG40.
- Machining centre without coolant.
- Tolerance range 210 µm H7.

SOLUTION

- Welded space frame bridge with KM coupling to adapt cutting units.
- One base bridge to adapt roughing, semi-finish, and fine finish head.

CUTTING DATA

- vc 240 m/min (787 SFM).
- f 0,28 mm/rev (0,011 IPR).

RESULT

- **Customer proprietary information.**

BENEFIT

- **Investment saving as only one base bridge and KM cutting units are used for diameter 2.700mm and 3.000mm.**
- **Ease of use due to KM coupling for fast and accurate cutting unit change.**

Wind Energy Housing

1 µm per click in radius adjustment

ROMICRON™ FINE BORING

CHALLENGE

- Flange Ø 1260–1400mm (49,6–55,1").
- Tolerance range 125 µm H7.
- Cast iron GGG40.
- One base bridge for multiple diameters.
- Machining centre without coolant.

SOLUTION

- Romicron standard modular MF40 element with engineered-solution aluminium bridge.
- CPGT060204/08HP KC5410™.

CUTTING DATA

- vc 200 m/min (650 SFM).
- f 0,12 mm/rev (0,005 IPR).

RESULT

- **Tool life of 73 min.**

BENEFIT

- **Investment saving as only one base bridge needed.**
- **Use of standard off-the-shelf Romicron tool.**
- **Ease of use due to Romicron.**

Synchronous Joint

Balanced by design

ROMICRON™ FINE BORING

CHALLENGE

- Pin machining Ø 13mm (0,512").
- Tolerance range 6 µm.
- Steel 42CrMo4 (4140).
- Machining centre with internal coolant.

SOLUTION

- Romicron standard HSK63ASVUBB1095MCLB head with engineered solution pin boring bar.
- TCMT110202FP KTP10™.

CUTTING DATA

- vc 160 m/min (525 SFM).
- f 0,1 mm/rev (0,004 IPR).

RESULT

- **Tool life of 300–450 components per insert.**
- **Surface finish Ra 0,3 µm.**
- **Cpk value ≥ 1,33.**

BENEFIT

- **Use of standard off-the-shelf Romicron tooling.**
- **Bore tolerance of 6 µm consistently achieved due to 1 µm per click in radius adjustment.**

Landing Gear

Feed out slide

MOTION TOOLING

CHALLENGE

- Bottle boring Ø 65–85,3mm (2,559–3,358").
- Steel 34CrNiMo6; 4340M.
- Generate complex rotationally symmetric shape inside pre-machined workpiece.
- Custom machining centre with internal coolant.

SOLUTION

- Motion tool with two slides activated by drawbar.
- Hole shape generated while tool is retracted.
- Engineered-solution insert to improve chip formation.

CUTTING DATA

- vc 31 m/min (102 SFM).
- f 0,20 mm/rev (0,008 IPR).

RESULT

- **Customer proprietary information.**

BENEFIT

- **Time savings compared to previous boring bar.**
- **Bottle boring Ø 65–85,3mm (2,559–3,358").**
- **Steel 34CrNiMo6; 4340M.**
- **Generate complex rotationally symmetric shape.**

Ream to the Extreme

The RHM™ Modular Reaming System offers performance levels commonly achieved with solid carbide reaming tools. With a unique, preloaded KST coupling, it is best suited to ream IT6 and IT7 high-quality holes in steel, stainless steel, and cast irons.

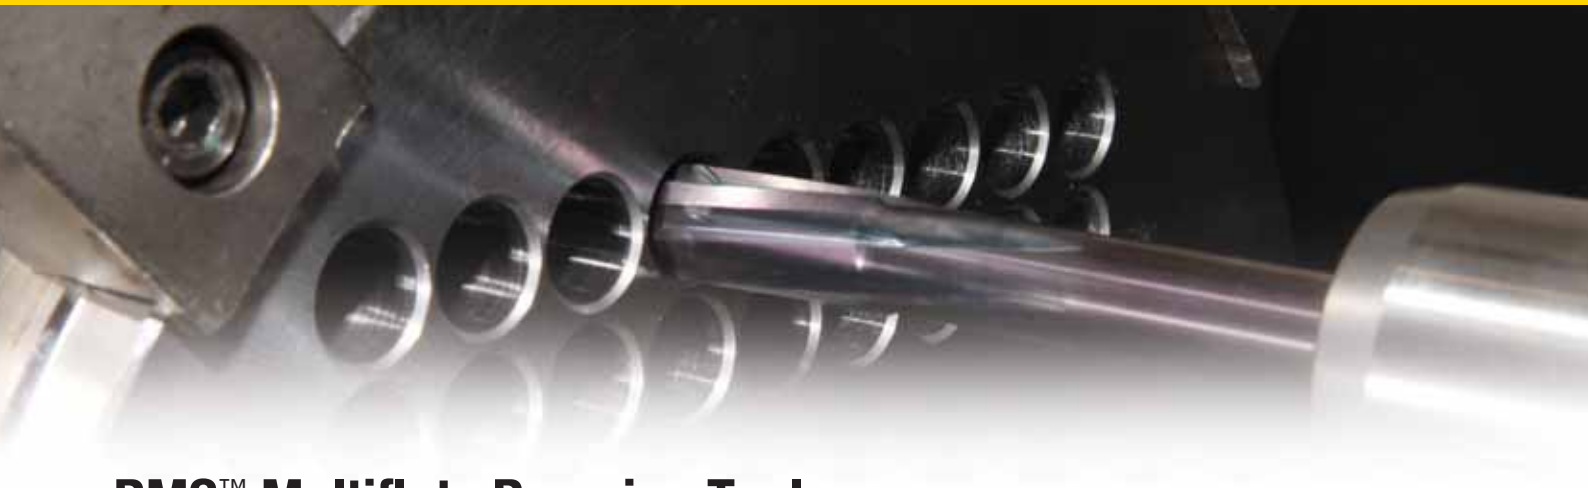
RHM offers you:

- A market-leading runout accuracy.
- A strong proprietary coupling that enables higher feed rates.
- Latest technology carbide and cermet grades for high cutting speeds and extended tool life.

Experience the advantages at your Authorised Kennametal Distributor or at **www.kennametal.com**.

www.kennametal.com.

KENNAMETAL®



RMS™ Multiflute Reaming Tools

RMS™ Multiflute Reaming Tools achieve highest metal removal rates from diameter 5–14mm with no customisation. All standard reamers are ground to an ISO H7 tolerance class hole to address most common applications. Specific coatings and lead configurations enable high-speed machining of steel, stainless steel, cast iron, and non–ferrous materials at accelerated speeds.

Primary Application

Use standard SIF™ Steerable Hydraulic Chucks or SIF Adaptors for easy compensation of radial runout and angular inaccuracies of the spindle to achieve the highest possible hole straightness and surface quality.

Features and Benefits

Higher Productivity and Profitability

- Longer tool life with increased hole and surface quality due to lapped ground leads.
- Highest metal removal rate at higher speeds and feeds due to reaming-specific grades and substrates.
- Improved straightness and cylindrical form compared to competitive tools and reduced vibration tendency due to unequal flutes.
- All RMS reamers offer internal coolant supply.

Customisation

- Diameters 1,40–14,15mm available with and without internal coolant in 0,001mm steps.
- Intermediate diameters of standard program available as Simple Specials with short delivery time.
- Solid cermet reaming tools and tooling for heat-resistant materials are available on request.

- For hole tolerance H7.
- Intermediate sizes ground to achieve IT7 hole tolerance class available.
- Starting with Ø 10mm in IT6 hole tolerance available.

RMB™ Multiflute Reaming

The RMB Multiflute Reaming System achieves solid carbide and solid cermet metal removal rates from 14–20mm with no customisation required. All standard reamers are ground to an ISO H7 tolerance class hole to address most applications, giving you an economical solution for large diameter sizes compared to solid carbide reamers. Specific coatings and lead configurations enable high-speed machining of steel, stainless steel, cast iron, and non-ferrous materials at accelerated speeds.

Primary Application

Use SIF™ Steerable Hydraulic Chucks or SIF Adaptors for easy compensation of radial runout and angular inaccuracies of the spindle to achieve the highest possible hole straightness and surface quality.

Features and Benefits

Higher Productivity and Profitability

- Longer tool life with increased hole and surface quality due to lapped ground leads.
- Highest metal removal rate at higher speeds and feeds due to reaming specific grades and substrates.
- Improved straightness and cylindrical form compared to competitive tools and reduced vibration tendency due to unequal flutes.
- Adjustment screw at straight-fluted RMB reamers to change internal coolant supply from axial to radial.

Customisation

- Diameters up to 50mm available with and without internal coolant in 0,001mm steps.
- Intermediate diameters of standard program available as Simple Specials with short delivery time.
- RMB tooling for machining heat-resistant materials is available on request.

- For hole tolerance H7.
- Intermediate sizes ground to achieve IT6 or IT7 hole tolerance class available.
- Adjustment screw to change internal coolant supply from axial to radial.

RHM™ Modular Reaming System

The RHM Modular Reaming System achieves solid reamer metal removal rates from diameter 14–50mm with no customisation required. All standard reamer heads are ground to achieve an ISO H7 tolerance class addressing most applications. This system gives you fast and easy change of heads using axial actuation toolholders, and replaceable heads eliminate the need for repeating runout check. Specific coatings and lead configurations enable high-speed machining of steel, stainless steel, cast iron, and non-ferrous materials at accelerated speeds.

Primary Application

Use SIF™ Steerable Hydraulic Chucks or SIF Adaptors for easy compensation of radial runout and angular inaccuracies of the spindle to achieve the highest possible hole straightness and surface quality.
Radial or axial actuation tool bodies are available at diameter 20mm.

Features and Benefits

Taper-Face Contact with KST Coupling

- Symmetrical torque transmission near head.
- Higher feed rate than conventional reaming tools.
- Better surface quality and tool life due to less tendency to vibrate.
- No need for head to body orientation.

Higher Productivity and Profitability

- Longer tool life with increased hole and surface quality due to lapped ground leads.
- Highest metal removal rate at higher speeds and feeds due to reaming specific grades and substrates.
- Improved straightness and cylindrical form compared to competitive tools and reduced vibration tendency due to unequal flutes.

Customisation

- Diameters up to 50mm available with and without internal coolant in 1 µm steps.
- Intermediate diameters of standard program available with short delivery time.
- RHM tooling for machining heat-resistant materials, as well as different lengths and couplings or shanks, available on request.

- For hole tolerance H7.
- Intermediate sizes ground to achieve IT6 or IT7 hole tolerance class available.
- Please order screw for axial use or pull stud separately.

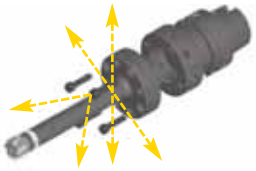
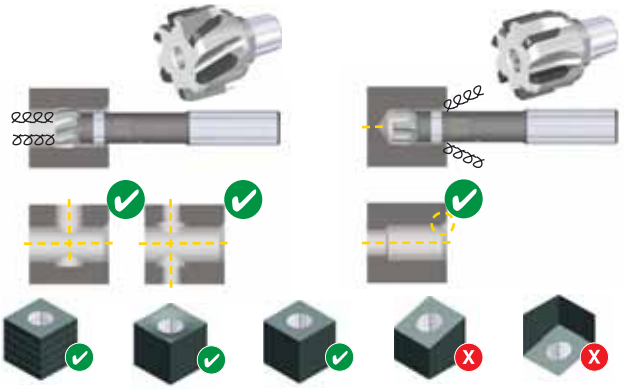
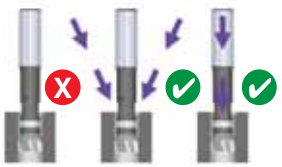
SIF™



Application



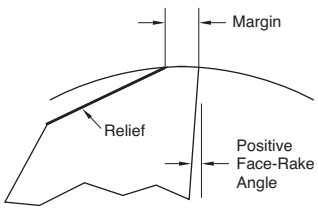
Coolant flow

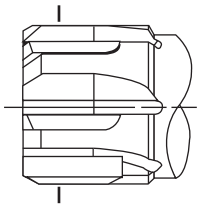


Basic Design Overview • Multiflute Reaming Tooling

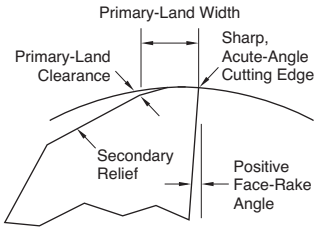
Kennametal offers two basic reaming designs, cylindrical margin land and up sharp. The cylindrical margin land design is used for all standard items of the RMS™, RMB™, and RHM™ reaming platforms. Engineered-solution tooling based on up sharp reaming design offers high hole quality and long tool life in exotic cases and high-temp alloys as only the sharp cutting edges contact with the workpiece.

Cylindrical Margin Reaming "C"

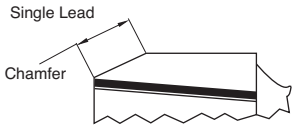


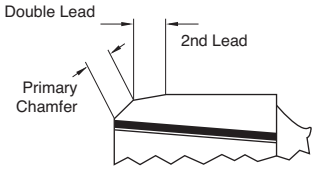


Up Sharp Reaming "U" & "NC"



Basic Lead Differences





Single Lead

The single lead chamfer design is used with all standard RMS, RMB, and RHM reaming tooling and enables the tool to be applied on various materials without customization. Design can be modified to meet specific applications such as thin walls, straightness correction, etc.

Double Lead

Double lead designs are available as engineered solutions and enable higher surface quality and feed rates in general. Lead dimensions require customisation regarding the material to be machined for best machining results.

Lead Design Overview

RIQ™ Quattro Cut™ and RIR™ Padded Reamers

Primary Application

Master the highest precision reaming applications with standard inserts in almost all materials with two unique systems available: RIR for small diameter and RIQ for easy setup in larger diameters.

The RIQ reamers are available starting at diameter 16mm with four edges for lowest cost per hole. They contain a proprietary pocket seat only requiring setup of the diameter, which is a huge benefit in terms of simplicity over other systems that require the diameter and back taper to be adjusted simultaneously. The RIR padded reamers are also proprietary and are available starting at diameter 6mm with two edges.

Features and Benefits

Higher Productivity and Profitability

- Higher tool life with Kennametal grades.
- User friendly — RIQ padded reamers reduce setup time.
- Make use of four full edges even in PCD or PCBN when using RIQ inserts.

Complete Insert Portfolio

- Large offering of available lead geometries — E13, EDS, EGU, EKS, radius, and taper inserts.
- Large offering of grades — coated and uncoated carbide, cermet, PCBN, and PCD.

Customisation

- All RIQ tooling is engineered according to your specific needs in diameters 16–350mm with internal coolant.
- All RIR tooling is engineered according to your specific needs in diameters 6–350mm with internal coolant.
- RIR taper reamer for cone-shaped holes is available on request.
- Multiflute and step reaming applications and special blade shapes are available upon request.
- Necessary measuring and adjustment equipment is available as standard.

Application recommendation	RIR	RIQ
	Bore tolerances less than 10 µm (can be greater). Geometric tolerancing down to 2 µm. Skilled workforce experience required. Multidiameter bore possible but less stability during end face machining. 	Bore tolerances less than 10 µm. Geometric tolerancing down to 2 µm. Lower skilled workforce, easier adjustment. Multidiameter bores. Blind bore end face machining, greater stability of insert.
Pocket seat	Flat with clamping groove in blade.	Serrated. Greater insert stability.
Cutting edges	2 (1 with PCD or CBN and 1 within diameter range 6–8mm)	4 (Including PCD, CBN, and cermet)
Special blade forms	yes	yes
Multiple insets on diameter	no	yes
Blade adjustment	Diameter and back taper.	Diameter only, back taper preset.
Blade adjusting screws	2	1
Number of insert sizes	5	3
Chamfer or seat machining	Possible, but adjustment required on length and angle.	Yes. Angle preset into body. Minimal adjustment for length.
General comments	Requires end users to be familiar with adjusting single blade reamers. High accuracy for single or multiple diameters.	Requires end users not to be familiar with typical adjusting single blade padded reamers. Complex multidiameter bores with chamfers and leads between bores. Multidiameter for high accuracy and higher productivity (feed rate).

Micro-Finishing Tool

Valve Seat Tool

Tool for Differential Housing

Blade Identification System

The RIR and RIQ blade part numbers are made up of 10 numbers selected from 5 categories. The first three digits indicate the reamer type, the next two digits are determined by reamer size, and the balance of the numbers allow specific blade configurations and grades.

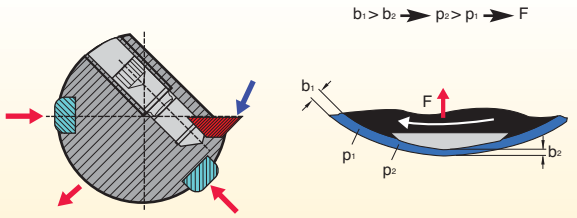
50100	175–350	>3

Basic Principle

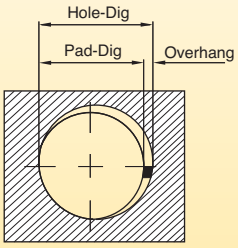
Kennametal's padded reaming tools follow two basic rules. The result, perfectly cylindrical bores with exceptional straightness and superior surface finishes combined with a bore diameter tolerance held to microns:

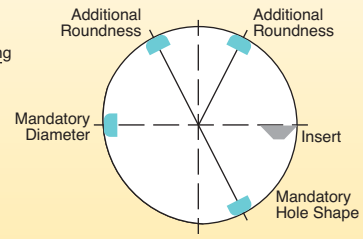
1. A SINGLE-POINT BORING TOOL SUPPORTED BY BEARING PADS, FLOATING ON A COOLANT FILM.
2. A TOOL MUST DEFLECT ONTO THE PADS, ON ENTERING THE HOLE, IN ORDER TO OBTAIN THE CORRECT SIZE.



Each padded reamer hosts a selection of guide pads that are positioned to resist the cutting forces created during machining. A minimum of two guide pads are necessary guiding the reamer in the predrilled hole.

The lubricant, in the form of coolant, gets between the pad and component surface, resulting in frictionless stability during cutting.





Guide pads are ground slightly smaller than the targeted diameter to machine a certain overhang between guide pads and insert cutting edge necessary for the machining process. Most common is a 10 µm overhang but can vary depending on the material to be cut.

As padded reamers are specifically ground, relative to diameter and tolerance, guide pads are not flexible or adjustable. The pad below the insert ensures hole roundness while the pad opposite to the insert defines the bore diameter. Each further pad improves the roundness, straightness, and bridges over interruptions in the bore area.

These carbide, cermet, PCD, and ceramic guide pads are selected and brazed or bonded to the body depending on coolant availability/type and abrasiveness of the material to be cut. Especially with high L/D ratio tooling (e.g., cam and crank boring bars), bonding of guide pads offers higher precision due to less thermal influence to the steel base body.

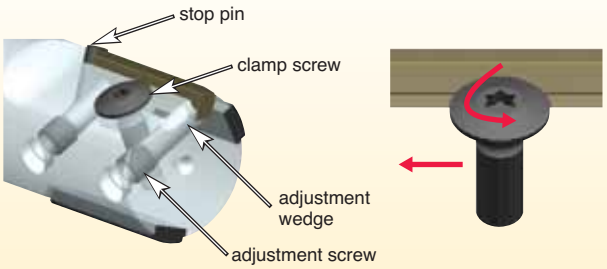
PCD			○		●		●

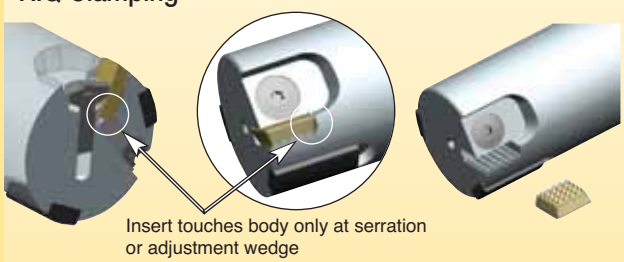
RIR Clamping



RIR reaming inserts are clamped by a single screw to avoid weakening of the pocket seat against common clamping wedges. This clamp screw has a left-hand thread to securely move the insert axially towards the stop pin until the insert aligns there. The stop pin ensures correct advancement of cutting insert to guiding pad.

Like other types of padded reamers using rectangular reaming inserts, two adjustment screws and wedges are required to adjust diameter and back taper accurately. Therefore, RIR is the preferred solution for diameters below RIQ range.

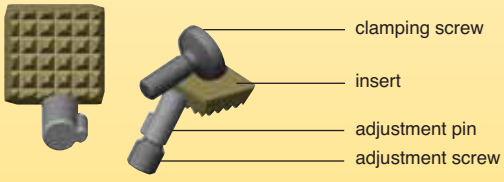
RIQ Clamping



There is no need to adjust back taper as this is already predefined by the serrations. Only the overhang of the cutting edge, relative to the guide pads, needs to be adjusted.

The right-hand clamp screw locks the insert securely onto the high-precision serration. The three cutting edges that are not in use are completely covered by the body while not touching them. All four cutting edges of full-face CBN and PCD inserts can be completely used without the danger of accidently losing one of them.

Adjustment Wedge and Screw



The proprietary adjustment wedge prevents any unpredictable rotation. This avoids errors during setup that cause tool damages.

RIR Tooling Setup

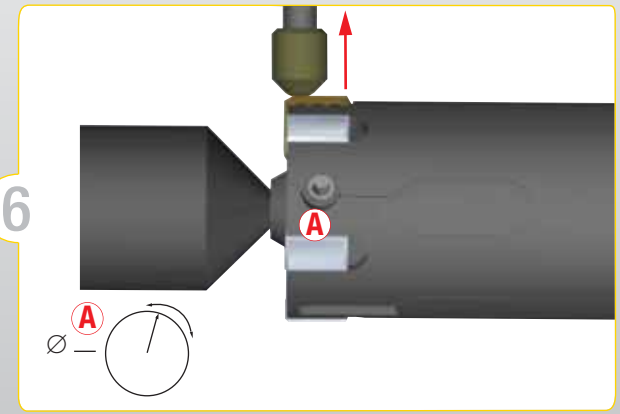
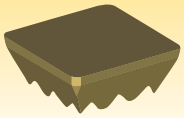
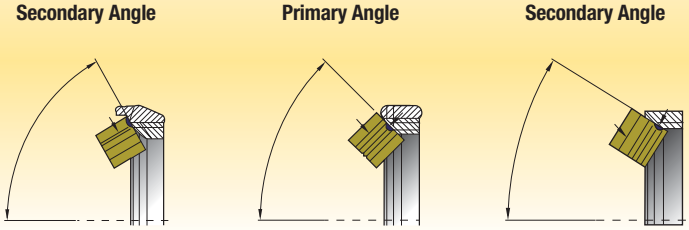
RIQ 12	M 3.0–RH	2,2

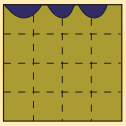


Valve Seat Tools • RIQ™ Quattro Cut™ Based Tooling

RIQ technology enables bypassing any angular adjustment of the insert and provides up to 12 cutting edges.







- Causing in three wear areas per edge.
- Resulting into 12 usable cutting edges per insert.

Valve Seat Tools • Machining Centre Solutions

RIQ valve seat tooling with integrated hydraulic chuck to clamp multiflute RMS™ or RIR™ guide pad reamer.

Machining Centre • Integrated Hydraulic Chuck

RMS Multiflute Reamer
for regular runout accuracy of valve seat to value guide demands

RIR Guide Pad Reamer
for highest runout accuracy of valve seat to value guide demands

Machining Centre Process • All Angles Formed to Finish Specifications in TWO Passes

Process A (Preferred)

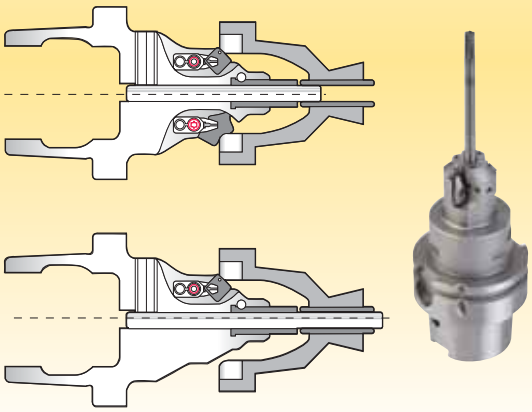
Tool 1 • Semi-Finish:
- Finish of secondary angles.
- Semi-finish of primary angles.
- Create pilot bore (short version of RMS or RIR reamer).

Tool 2 • Finish:
- Finish of primary angles.
- Finish of guide bore (short version of RMS or RIR reamer).

Process B (Alternate)

Tool 1 • Finish Valve Seat:
- Finish of primary and secondary angles.
- Create pilot bore (short version of RMS or RIR reamer).

Tool 2 • Finish Valve Guide:
- Finish of guide bore (short version of RMS or RIR reamer).



Valve Seat Tools • Transfer Line Solutions

RIQ valve seat tooling with carbide bushing guiding RMS or RIR reamer machining the valve guide on transfer lines.

Transfer Line • Integrated Carbide Bushing

Multiflute Reamer RMS
for regular runout accuracy of valve seat to value guide demands

RIR Guide Pad Reamer
for highest runout accuracy of valve seat to value guide demands

Transfer Line Process • All Angles Formed to Finish Specifications in ONE Pass

Process A (Preferred)

Tool 1 • Semi-Finish:
- Semi-finish of secondary angles.
- Semi-finish of primary angles.

Tool 2 • Finish:
- Finish of primary angles.
- Finish of secondary angles.
- Finish of guide bore with feed out multiflute or guide pad reamer (squirt-through type).

Process B (Alternate)

Tool 1 • Semi-Finish and Finish Combined:
- Finish of primary and secondary seat angles.
- Finish of guide bore with feed out multiflute or guide pad reamer (squirt-through type).

Required tool life:	mm	Required speed:	m/min
Required CPP:	per hole (€, RMB, etc.)	Required cycle time:	sec

Additional information: (e.g., step tool diameters, interferences, weight, or dimensional restrictions, customer reason for change, etc.)

Reaming Allowances for Multi-Blade Reaming

	reaming allowance		
	mm		
mm	min	middle	max
1,40–4,80	0,08	0,12	0,20
4,81–9,59	0,10	0,15	0,25
9,60–15,00	0,15	0,20	0,30
15,00–20,00	0,15	0,25	0,35
20,00–50,00	0,20	0,30	0,40

Causes of and Remedies for Reaming Problems

problem		cause	possible remedy
Drill diameter too large		1. Reaming tool running out-of-centre. 2. Concentricity of pilot hole and ream machining unsatisfactory. 3. Built-up edge. 4. Unsuitable cooling lubricant. 5. Reaming tool Ø too large.	• Use SIF™ equalising adaptor. • Re-align, use floating head. • Change cooling lubricant. • Change cutting speed. • Measure reamers and send for repairs.
Drill diameter too small		1. Reamer worn. 2. Unsuitable cooling lubricant. 3. Reaming allowance too small.	• Replace and refit tool. • Change cooling lubricant. • Increase reaming allowance.
Conical drill profile wider towards drill runout		1. Concentricity of pilot hole and reaming unsatisfactory. 2. Positioning accuracy of pilot hole to reaming.	• Re-align, use SIF equalising adaptor. • Correct positioning accuracy.
Conical drill profile wider at drill entry point		1. Concentricity of pilot hole and reaming unsatisfactory. 2. Reaming tool skim cutting with ledger.	• Re-align, use floating head. • Securely clamp reaming tool axially.
Hole out-of-center and/or showing chatter marks		1. Reaming tool running out-of-centre. 2. Slanted cutting surface/asymmetrical cutting. 3. Workpiece twisted.	• Use SIF equalising adaptor. • Flatten surface before drilling or reaming. • Take the direction of impact into account when clamping the workpiece.
Surface quality does not meet specification		1. Tool cutters worn. 2. Reaming tool running out-of-centre. 3. Incorrect technology data (cutting parameters). 4. Inadequate chip evacuation.	• Replace and refit tool. • Use SIF equalising adaptor. • Change cutting parameters in machining range. • Optimise coolant supply; increase coolant pressure and volume.
Feed grooves		1. Built-up edge.	• Change cooling lubricant. • Change cutting speed.

SIF™ Steerable Toolholder

Primary Application

SIF Steerable Toolholders should be used for easy compensation of radial runout and angular inaccuracies caused by the machine spindle or gravity. SIF tooling improves hole roundness for highest possible hole straightness and surface quality. Runout-optimised reaming tools provide higher process stability and longer tool life.

Use a separate SIF tooling package for each machine to ensure best configuration between reaming tool and spindle and HSK bushes for faster tool change to avoid repeating adjustments.

Features and Benefits

Higher Productivity and Profitability

- Easy compensation of radial runout and angular inaccuracies increases process control and tool life.
- Less time-consuming adjustment due to eight radial screws.
- Increase stability due to fewer interfaces by use of RIQ™ Quattro Cut™, RIR™, and RHM™ reaming tooling with SIF backend.

Versatility

- Standard DV, BT, CV, and HSK adaptors can be used in combination with SIF hydraulic chucks for most precise concentric clamping, highest accuracy, and flexible clamping method using hydraulic chuck sleeves.
- HSK bushes with SIF coupling enables fast tool exchange and eliminates the need for repeated runout adjustment, reducing downtime.

Customisation

- Different length versions and coupling size combinations are available.

- Through-the-toolholder coolant capability — form AD or form B.
- Suitable for SIF adaptors.

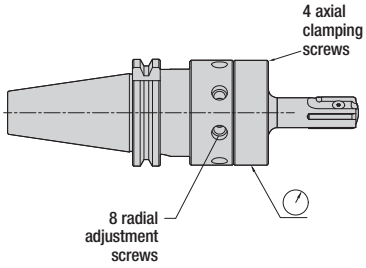
SIF Tooling Setup

Step 1: Rough setup of runout at flange

1

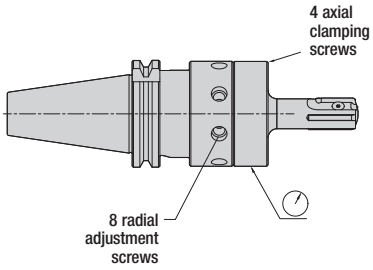
- Set gage (TIR) at SIF flange.
- Tight axial clamping screws 6–8 Nm.
- Use radial adjustment screws to achieve 5 µm runout.



Step 2: Fine setup of runout at flange

2

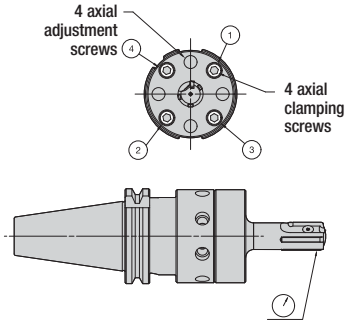
- Tight axial clamping screws crosswise:
  SIF70/80 18 Nm.
  SIF100 32 Nm.
- Use radial adjustment screws to achieve 2 µm runout.
- All radial adjustment screws to be clamped tight at 4 Nm.



Step 3: Adjustment of runout at front

3

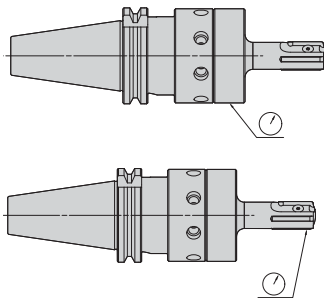
- Set gage (TIR) at control grind, cylindrical land, or guide pads.
- Use axial adjustment screws to achieve a maximum runout error of 2 µm.
- All axial adjustment screws to be clamped tight at 4 Nm.



Step 4: Final runout check

4

- Check using gage (TIR) at flange; no deviation by theory.
- If needed, use radial adjustment screws to set runout below 2 µm.
- Any modification of radial setup demands an axial runout check and adjustment, if necessary.



PCD Customised Tooling

PCD tooling offers the highest productivity and accuracy, reduced tooling costs due to long tool life, and secure process control due to close tolerances, increasing your overall quality and reducing scrap rate and inspection costs.

Primary Application

Use Kennametal PCD tooling for machining aluminium and aluminium alloys, magnesium, copper, brass, bronze, plastics (GFRP, CFRP), MMC (Metal Matrix Composite), graphite, tungsten carbide green-stages, and ceramic. Choose from various standardised PCD product platforms for drilling, counterboring, and reaming. Steel- and solid carbide-based tool body designs are available for direct spindle coupling with or without adjustable PCD pocket seats or with steerable SIF™ backend.

Features and Benefits

Higher Productivity and Profitability

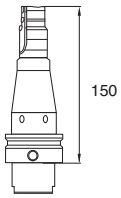
- Highest chip removal rates and less tool changes by using multistep tooling.
- Extremely long tool life even when maintaining very tight tolerances.
- Reduced built-up edge and burr formation, improved concentric hole shape with multistep tooling, and less influence on surface microstructure of the workpiece.

Product Platform Versatility

- All PCD drilling, counterboring, and reaming tools are engineered according to your specific needs in diameter, shape, radii, and steps.
- Various PCD grades are available to match your specific material.
- Multistep drilling, profiling, countersinking, and reaming platforms available.
- Coolant channel design for optimised chip evacuation with regular and MQL.
- Steel-based tool body designs are available for direct spindle coupling or enable adjustable pocket seat design for highest accuracy even at larger sizes.
- Carbide-based tool bodies enable highest accuracy and tool life at high L/D ratio applications.
- Tooling designs with SIF steerable interface optimises runout and enables highest accuracy and tool life.
- All PCD tooling is prebalanced by design. Further precision balancing is available on request.

PCD Tooling Basic Design Overview

Kennametal offers you certain PCD design platforms to optimally fulfill your machining task.
These basic designs are independent, whether you are drilling, countersinking, profiling, reaming, or milling.
All tooling designs are capable of internal coolant, MQL coolant, and are balanced by design



PCD .. ST —
Steel body

PCD .. SC —

	**PCD-STM**		**PCD-STA with SIF** **PCD-SCA with SIF**

PCD Drill-Point Design Overview

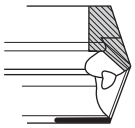
CT
- PCD corner tipped.
- Carbide-based body design.
- Diameter >4,2mm.

Use for general application at moderate cutting speeds up to 12 x D drilling depth.

CTE
- PCD corner tipped, E point.
- Carbide-based body design.
- Diameter >4,2mm.

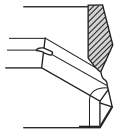
Use at precasted holes at moderate cutting speeds up to 12 x D drilling depth.

SW
- Full-face sandwich PCD.
- Carbide-based body design.
- Diameter >5mm.



Use at high cutting speeds and abrasive materials up to 5 x D drilling depth.

MT
- PCD corner tipped.
- Steel- and carbide-based body design.
- Diameter >12mm.



Use for drilling casted surfaces up to 3 x D drilling depth.

Cutting Edge and Margin Land Requirements

Determine correlations between spindle to edge overhang, amount of cutting, and margin lands for guidance and increased precision.

Romicron™ Fine-Boring System

Primary Application

The Romicron PCD tooling portfolio has a diameter range of 4–213mm and reduces setup time and scrap rates while increasing your overall equipment efficiency. This premium fine-boring system can be used in most materials commonly found in metalcutting environments by applying the latest Kennametal Standard ISO Turning Inserts. Its closed loop boring (CLB) provides a unique possibility to automate the insert wear compensation with minimal investment due to the precise 2 µm diameter adjustment per increment. Romicron should be used where extremely close tolerances are critical to the overall process or where fast and easy diameter adjustments are needed.

Features and Benefits

Higher Productivity and Profitability

- Reduce scrap rates and setup time due to the backlash-free adjustment.
- Make use of the entire tool life of used inserts as diameter adjustment can be done inside of the machine, avoiding routine insert changes in the setup room.
- Avoid time-consuming control cuts or sister tooling.
- No training or experience is needed, resulting in less stress during adjustments.

Versatility

- Retrofit existing machines to automated wear compensation using the standard CLB pin without any electronic equipment needed besides a measuring device of holes produced.
- Use SVS00B-SVS6B prebalanced heads as the preferred solution for diameter 25–139mm
- SVUBB1 tooling for high-speed applications 4–16,5mm.
- Large diameter range of 6–100mm using SVUBB2 tooling.
- SVU65 and SVU92 for larger diameters of 71–213mm.

Ease of Adjustment

- No tools are needed so adjustment can take place on the machine tool. Eliminates the need to remove and return the boring head to the presetting area providing increased productivity.
- SEE, FEEL, and HEAR the adjustment mechanism for fail-safe size control.

Customisation

- Engineered solutions available for multistep or high length-to-diameter tooling.
- Anti-chatter devices and various non-standard machine spindle coupling sizes are available.

Boring range, coolant capacity, and maximum RPM features for all Romicron boring heads.

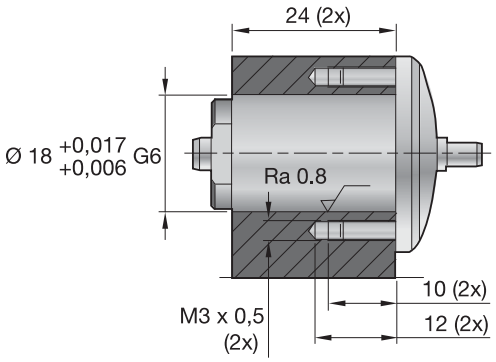
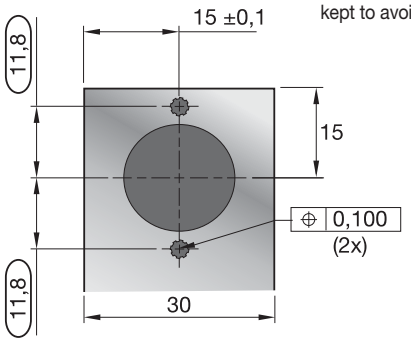
Mounting Dimensions of the Romicron CLB Pin

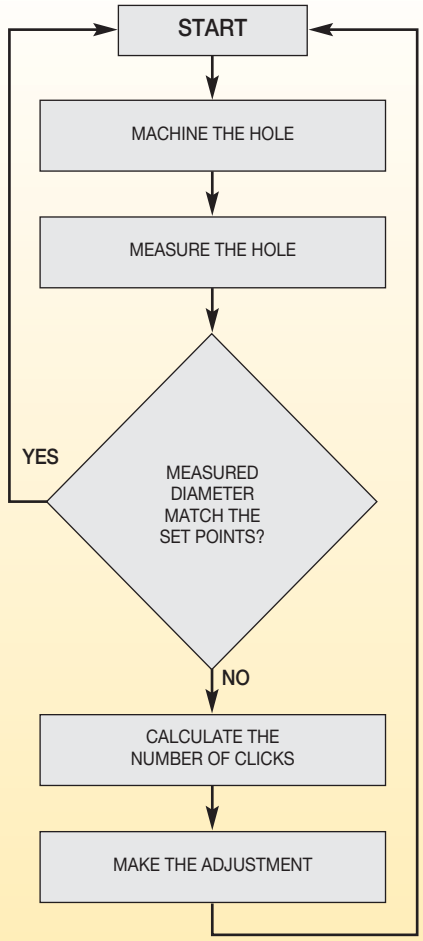




WARNING:
This position must be kept to avoid collisions.

The Romicron Closed Loop Boring Process

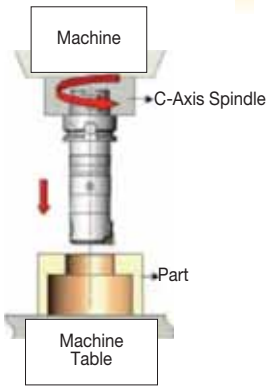
Closed Loop Boring (CLB) provides the unique possibility to automate the insert wear compensation with minimal investment due to the precise 2 µm adjustment in diameter of these tools per increment. Retrofit existing machines to automated wear compensation using the standard CLB pin without any electronic equipment needed besides a measuring device of holes produced.



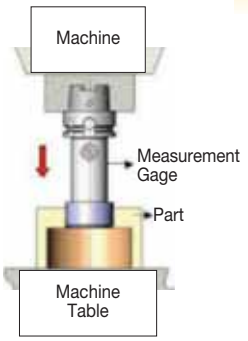
NOTE: This process is only possible with the Romicron system because it does not require tools to make the adjustment.

1. A precision system measures the holes after the machine process. The data is sent to the CNC.
2. The values are compared to the set points.
3. If the diameter is in the range of the specified set points, the machine goes to the next hole. Otherwise, the software calculates the necessary increment and automatically adjusts the Romicron using the CLB pin.

Step 1



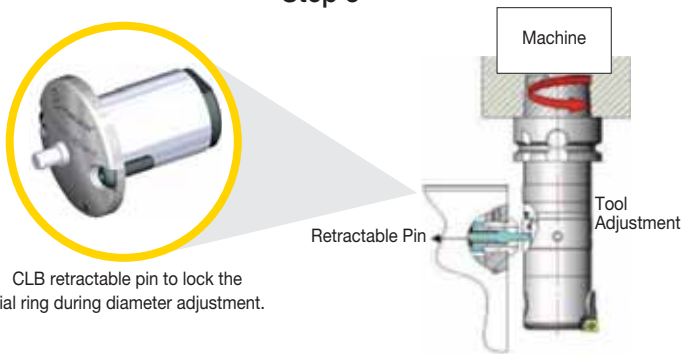
Step 2



CNC Machine Command

CNC calculates the correction and commands the tool.

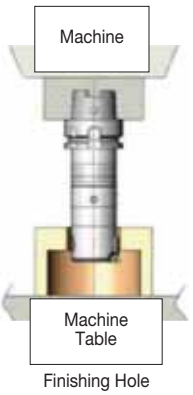
Step 3



CLB retractable pin to lock the dial ring during diameter adjustment.

Step 4

Four CLB holes positioned at diameter dial ring.



Finishing Hole

- For correct balance ring settings, see page K164.
- Order boring bar separately; see page K145.
- Order taper shank seperately; see page K157.

Romicron Assembly Instructions

The required parts for the adaptor assembly are identified on Figures 1 and 2. The SVS model is shown. The instructions are also valid to the SVU and SVUBB models

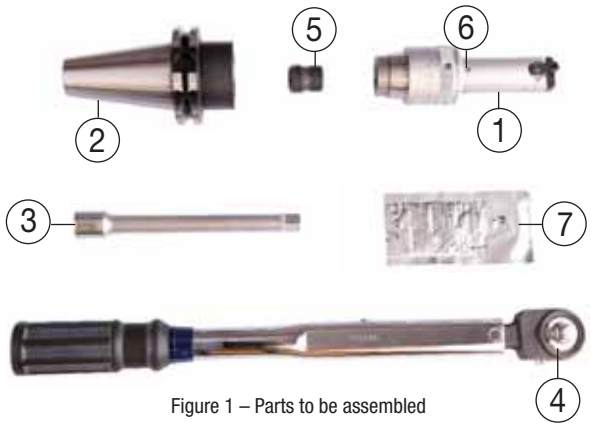

Figure 1 – Parts to be assembled

1	Boring head
2	Taper shank
3	Square extension (3/8" or 1/2")
4	Torque wrench
5	Differential connector
6	Positioning pin
7	Lubricant ASL-3G

WARNING:
Before starting the assembly procedure, ensure that all surfaces to be assembled together are free of dirt and completely clean.

Figure 2 – Assembled Tool

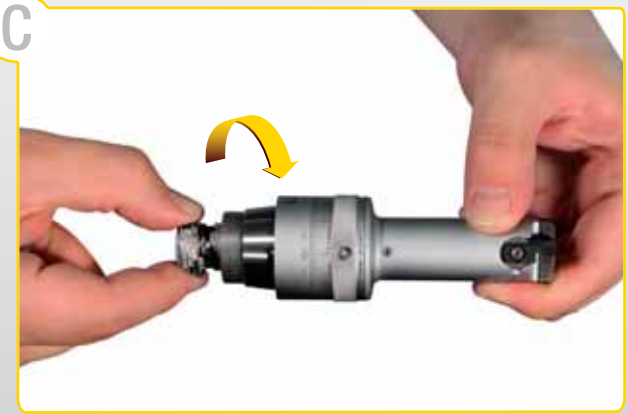
A

A. Remove the Differential Connector (5) from the Taper Shank (2).

B

B. Lubricate the thread on the Differential Connector (5) with Lubricant ASL-3G (7), supplied with the Taper Shank (2).

C



C. Screw the Differential Connector (5) into the rear thread on the Boring Head (1) until the end of the thread. At this time it is not necessary to tighten the Differential Connector (5). Remember that the Differential Connector (5) has two different screws, so there is no way to assemble the wrong side

Romicron Assembly Instructions

D

D. Screw the front end of the Taper Shank (2) onto the Differential Connector (5), now located at the back on the Boring Head (1). Screw carefully until the Positioning Pin (6) gently touches the Taper (2) face. Stop!

F

F. Insert the square end of the Extension (3) through the Taper Shank (2) and into the Differential Connector (5). Keeping the Positioning Pin (6) and the positioning slot aligned, turn the Extensions (3) counter-clockwise until you see that two Romicron faces are meshing. Ensure that the Positioning Pin (6) is inserted into the slot on the Taper Shank (2).

E

E. Unscrew the Taper Shank (2) a little bit until the Positioning Pin (6) is aligned with the positioning slot mark in the Taper Shank (2) face.

G

G. Tighten the Differential Connector (5) with the specified required torque, as shown on the table below. Use the Torque Wrench (4) to do this.

Tightening Torque Specifications

joint size	Torque Nm	drive square
KR32	30	3/8"
KR50	40	3/8"
KR63	55	1/2"
KR80	65	1/2"

Following these procedures will result in a rigid surface contact between the taper and the boring head face.

1. The balancing dials are identified on the figure below.

2. Ensure that the zero mark of dial 02 is coincident with Romicron Body Mark, and the zero mark dial 01 is coincident with the zero mark on dial 02.

3. Read the position values of the dials 01 and 02 on the table. For example, to machine a 10mm diameter, the positions are 01 = 24R and 02 = 22R.

(Balancing Table • SVU-BB1 Boring Head continued)

4. The dial 01 must be positioned first. Moving the dial, adjust the position of dial 01. Use the mark reference located on dial 02. The dial resolution is 2 units of table values.

5. Now adjust the position for dial 02. Use the mark reference located on the Romicron body. After the adjustment of dial 02, the Romicron is correctly balanced.

1. The balancing dials are identified on the figure below.

2. Ensure that the zero mark of dial 02 is coincident with Romicron Body Mark, and the zero mark dial 01 is coincident with the zero mark on dial 02.

3. Read the position values of the dials 01 and 02 on the table. For example, to machine a 10mm diameter, the positions are 01 = 17L and 02 = 20LR.

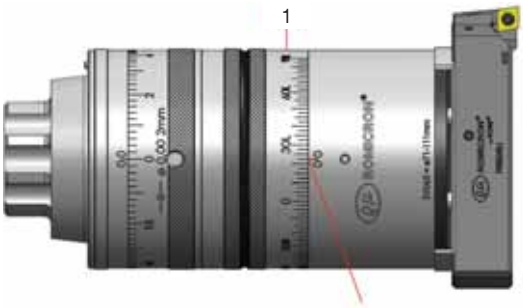
Balancing Table • SVU-65 Boring Head



reference mark for dial 01

2,5 units

1. The balancing dial 01 is identified on the figure below. The dial resolution is 2,5 units of table values.

2. Read the position value of the dial 01 on the table. For example, to machine a 76,2 mm diameter, the position is 01 = 22,5 L.

3. By moving dial 01, adjust its position, observing its proper reference mark, according to the read value.

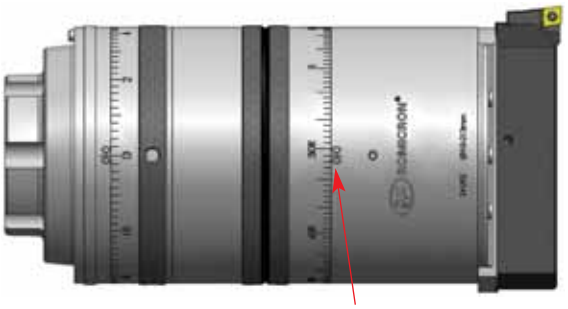
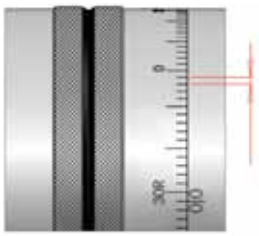
Balancing Table • SVU-92 Boring Head





1. The balancing dial 01 is identified on the figure below. The dial resolution is 2,0 units of table values.

2. Read the position value of the dial 01 on the table. For example, to machine a 76,2 mm diameter, the position is 01 = 22,5 L.

3. By moving dial 01, adjust its position, observing its proper reference mark, according to the read value.

The EDGE to PERFORM

Multicron Fine-Boring Tooling

Multiple edges allow respective increase of feed rate to increase productivity and metal removal rate (MRR).

- Engineered solutions are available starting at diameter 78mm with two independent adjustable Romicron™ edges.
- Combination of semi-finishing and finishing cutting operations in one tool are also possible.
- Romicron edges can be set up independently and adjusted to compensate for insert wear with one central dial to enable CLB as well.

Experience the advantages at your Authorised Kennametal Distributor or at **www.kennametal.com**.

www.kennametal.com

KENNAMETAL®

ModBORE™

One system from highly flexible roughing and fine-boring heads to large bridge tooling with optimum amount of tooling components.

Primary Application

This premium boring line enables rough to fine-boring operations using one system with a large diameter range from 9,75–2.205mm. ModBORE can be used in most materials commonly found in the metalcutting environment by applying the latest technology in Kennametal Standard ISO Turning Inserts.

Features and Benefits

Complete System

- Twin blade heads for roughing to semi-finishing operations starting from diameter 23,5mm.
- Fine-boring heads for finishing for diameters 9,75–2.205mm.
- Bridge tooling for large diameters up to 2.205mm standard with both roughing and fine-finishing heads.
- Through-coolant capability in all series.

Resolution

- Fine adjustable roughing heads.
- 0,01mm diameter adjustment respective 2 µm with easy-to-read large vernier scale with fine-boring heads.

Product Variety

- KM™ shanks for adaptation to all spindles via respective adaptors.
- HSK shanks for direct adaptation.
- Inch shanks as most economic variant for adaptation via respective adaptors.

Customisation

- Engineered solutions available.
- Anti-chatter devices available.
- Cartridges can be designed into standard boring heads for added versatility.

ModBORE™ Fine-Boring System

Based on KM™, HSK, and inch SSF couplings, match all spindle specifications direct or indirect via adaptors.
The ModBORE Fine-Boring System utilises standard ISO/ANSI turning inserts for maximum performance and flexibility.

RBHT • Twin Cutters for Rough and Semi-Finish Boring

- Diameters 23,5–153mm.
- KM, HSK, and inch straight shank back end versions available.
- Special preloaded serration and ground support face ensures very stable connection, minimises cutting vibration, and maximises position accuracy while enabling easy diameter adjustment.
- Large selection of blades sets:
  - — Staggered — efficient machining of large depths of cut.
  - — 70° — for challenging applications requiring stable corner radii and full utilisation of inserts.
  - — 90° — most precise machining results.
- Generous clearance and through coolant enables free chip flow and improves tool life.
- All insert holders allow positive standard turning inserts for lowest cutting forces. Starting with diameter 65,5mm, additional insert holders for negative standard turning inserts enable even higher feed rates for maximum metal removal rates.

FBHO • Offset Boring Bar Heads for Fine Finish

- Diameters 9,75–88,1mm.
- KM, HSK, and inch straight shank back end versions available.
- Use of a precision-ground micrometric screw enables fine adjustment of 2 µm via vernier scale. The large, TiN-coated dial is easy to adjust and easy to read. The force- and form-fixed adjustment mechanism is almost free of any backlash and play.
- Standard steel and carbide boring bars can be adjusted in length by pushing them deep into the body for maximum stability.
- Through coolant directed to the cutting edge improves tool life, surface finish, and chip evacuation.

FBHM • Offset Boring Bar and Cartridge Heads for Fine Finish

- Diameters 9,75–320mm.
- KM-TS, HSK, CV, DV, and BT steep taper back end versions available.
- Use of a precision-ground micrometric screw enables fine adjustment of 2 µm via vernier scale. The large, TiN-coated dial is easy to adjust and easy to read. The force- and form-fixed adjustment mechanism is almost free of any backlash and play.
- Standard steel and carbide boring bars adjust in length by pushing them deep into the body for maximum stability.
- Aluminium diameter extender with insert cartridges and counterweightare used for diameters starting at 86mm for maximum flexibility.
- Through coolant directed to the cutting edge improves tool life, surface finish, and chip evacuation.

FBHS • Cartridge Boring Heads for Fine Finish

- Diameters 23,5–153mm.
- KM™, HSK, and inch straight shank back end versions available.
- Use of a precision-ground micrometric screw enables fine adjustment of 2 µm via vernier scale. The large, TiN-coated dial is easy to adjust and easy to read. The force- and form-fixed adjustment mechanism is almost free of any backlash and play.
- Large selection of insert holders:
  - 95° — for use of Wiper turning inserts.
  - 90° regular diameter — for most efficient machining of large depths of cut.
  - 90° oversized diameter — for enhanced use of boring head diameter capabilities.
- Generous clearance and through coolant directed to the cutting edge improves tool life, surface finish, and chip evacuation.

BT • Bridge Tools for Rough and Finish Boring

- Diameters 150–2.205mm.
- Highly sophisticated ground serration between consoles/slides and heads as well as T-style bolt clamping provides highest cutting force transmission capabilities, sensitive adjustment, and avoids diameter changes when heads are clamped.
- Only 10 bridge consoles are needed for diameters up to 655mm.
- KM, HSK, and various steep taper adaptors with console corresponding ground serration are available as standard. Through coolant to the cutting edge improves tool life and surface finish.
- Diameters 650–2.205mm are covered with only three aluminium-based consoles and two sets of steel slides for mounting rough and finish boring heads for direct spindle of shell mill adaptor clamping.
- 90° roughing head sets ensure precise height alignment and, by use of negative standard turning inserts, highest metal removal rates.
- New counterweight for better dynamic balancing supplements the fine-boring head with precision-ground micrometric screw enabling fine adjustment of 2 µm via vernier scale.

Beyond™ High-Performance Solid Carbide Taps

Primary Application

Solid carbide taps offer higher productivity and outstanding performance in a wider range of materials than formerly possible. Get more production from a single tool and superior accuracy of product thread that surpasses the competition. Kennametal High-Performance Solid Carbide Taps are available in various specifications with enhanced precision and design, which translates into longer tool life, excellent performance, and exceptional wear resistance.

- High performance to surpass competitive taps.
- More production from a single tool.
- Available in various specifications.

Features and Benefits

Advanced Technology

- Manufactured with micrograin carbide for exceptional wear life.
- Ideal for long production runs where fewer tool changes equate to greater productivity.
- Designed for outstanding tool life in steel, cast iron, aluminium, and hardened materials.
- Runs 4x faster and lasts 4x longer than conventional taps.
- Tap runout less than 10 microns (.0004").
- PVD nanolayer TiAlN/TiN coated carbide grade.

Customisation

- Engineered solutions available upon request.
- Available in various specifications.

Application Information

- Maximum chip control and free cutting in through holes.
- For use on CNC machines with synchronous or rigid tapping control and precision toolholders.
- Straight-flute taps for sizes M4 and larger for ductile or cast iron.
- Can be factory reconditioned to original specifications and tolerances.

The SPEED to EXCEED

Solid Carbide Taps

The Kennametal Solid Carbide Taps deliver the accuracy you demand at up to four times the speed of HSS taps. Longer tool life, exceptional thread quality, and an array of sizes for ferrous and non-ferrous materials make our taps the most trusted and productive tools in the industry.

- Reduce your operating costs by up to 65%.
- Workpiece-specific grades: KC7542™ for steels and cast irons, KC7512™ for aluminium.
- Go 4x faster with 4x the service life of conventional HSS offerings.
- Wide array of styles and sizes for through or blind hole applications.

Tap into something great at your Authorised Kennametal Distributor or at **www.kennametal.com**.

wear resistance ⟷ toughness

Grade	Coating	Grade Description	05	10	15	20	25	30	35	40	45
	KC7542	Coated carbide. PVD — multilayer coating with TiAlN and TiN over a high-strength carbide substrate specifically designed for tap application. Use in steel up to 32 HRC and cast iron at four times faster speeds than HSS-E-PM taps.	P	P	P						
			K	K	K						
	KC7512	Coated carbide. PVD — two-layer coating over fine-grain carbide. Coating consists of low friction CrC/C over wear-resistant TiN. CrC/C resists galling of non-ferrous materials to the tap. Provides superior performance for tapping cast aluminium and other non-ferrous materials.	N	N	N						
NEW!	KCU36	Coated carbide. PVD — two-layer coating with heat-resistant TiAlN base layer and low-friction MoS_2 top layer over carbide substrate. Use in hardened steel 55–63 HRC.	H			H	H	H			
NEW!	KP6525	Coated HSS-E-PM. PVD — heat- and wear-resistant high vanadium — cobalt powder metal HSS substrate coated with wear-resistant TiCN base layer and low-friction TiN top layer. Use in steel, cast iron, and cast aluminium with silicon.	P			P	P	P			
			K				K	K	K		
NEW!	KSP21	Coated HSS-E-PM. PVD — powder metal HSS-E substrate with TiN coating. Use for tapping steel 32–44 HRC and for forming threads in steel 32 HRC.	P					P	P	P	
NEW!	KSH26	Coated HSS-E-PM. PVD — powder metal HSS-E substrate coated with TiN base layer and low-friction MoS_2 top layer. Use in deep blind steel holes 32–44 HRC.	P					P	P	P	
NEW!	KM6515	Coated HSS-E-PM. PVD — heat- and wear-resistant high vanadium — cobalt powder metal HSS substrate. Coating consists of low-friction CrC/C over wear-resistant TiN base layer. Use for tapping stainless steel and non-ferrous materials.	M			M	M	M			
			N				N	N	N		
NEW!	KSN28	Coated HSS-E-PM. PVD — powder metal HSS-E substrate with DLC coating. Use for form tapping aluminium. Not recommended for steel.	N				N	N	N		
NEW!	KSN38	Coated HSS-E. PVD — lower vanadium HSS-E substrate with DLC coating. Use for tapping non-ferrous materials with low cutting temperatures like wrought aluminium. Not recommended for steel.	N					N	N	N	
NEW!	KSN25	Coated HSS-E-PM. PVD — powder metal HSS-E substrate with two-layer coating. TiN base layer and DLC top layer that resists galling of non-ferrous materials to the tap. Use for tapping titanium. Not recommended for steel.	S			S	S	S			
NEW!	KSSH22	Coated HSS-E-PM. PVD — heat- and wear-resistant high vanadium — cobalt powder metal HSS substrate with high hardness TiCN coating. Use when tapping heat-treated steel 44–55 HRC and cobalt- or nickel-based heat-resistant alloys.	S		S	S	S				
			H		H	H	H

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.
For more information, please visit **www.kennametal.com/carbiderecycling.**

The Kennametal Solution

Kennametal Global Engineered Solutions. Coordinated global resources with world-class manufacturing, process development, and implementation capabilities.

No matter how small or large your project.

- Whether it's a single tailored tool or the development of a comprehensive manufacturing process, Kennametal's team can manage the development, personnel training, and successful implementation of the complete solution.

Regardless of where you're located, Kennametal is everywhere you are.

- With Kennametal's team, you receive globally coordinated manufacturing, process development, implementation, and optimisation support and key alliances with machine tool builders and other leading technology manufacturers that ensure a complete solution.

Experience the advantages at your Authorised Kennametal Distributor or at **www.kennametal.com**.

High-Performance HSS-E-PM Taps

Primary Application

The High-Performance High-Speed Steel (HSS-E-PM) Taps are manufactured to both ANSI and DIN standards from powder metal, offering high productivity and reliable thread quality and are engineered for greater wear and heat resistance. HSS-E-PM tools can be used on conventional non-rigid and CNC-synchronous tapping machines for tapping through and blind holes in a variety of materials and is particularly efficient in tapping soft steel and aluminium.

The precision h6 shank enables usage in either conventional square drive tap holders or in precision round toolholders.

Features and Benefits

Improved Performance, Wide Range of Choices

- Higher strength and wider range of applications versus carbide taps.
- Higher tapping speed capability and longer life than conventional HSS-E taps.
- Can be used on either conventional or synchronous tapping machines.
- Forming taps for soft steel and aluminium.
- Selection of taps for all materials:
  - Steel
  - Stainless steel
  - Iron
  - Aluminium, cast and wrought
  - Aerospace
  - Hard steel

Customisation

- Customised taps are available with short lead times from semi-finished blanks.

HSS Taps Identification System

T620MF120X150R6HX-D4
T620NC06250-11R3BX-A

Metric

T620	MF	120	X	150	R	6HX	-D4

Inch

T620	NC	06250	-	11	R	3BX	-A
Tap Design	Type of Thread	Nominal Diameter of Thread		Pitch	Cutting Direction	Tolerance Class	Taps Dimension
		mm or inch (depending on type)		mm or TPI (depending on type)			

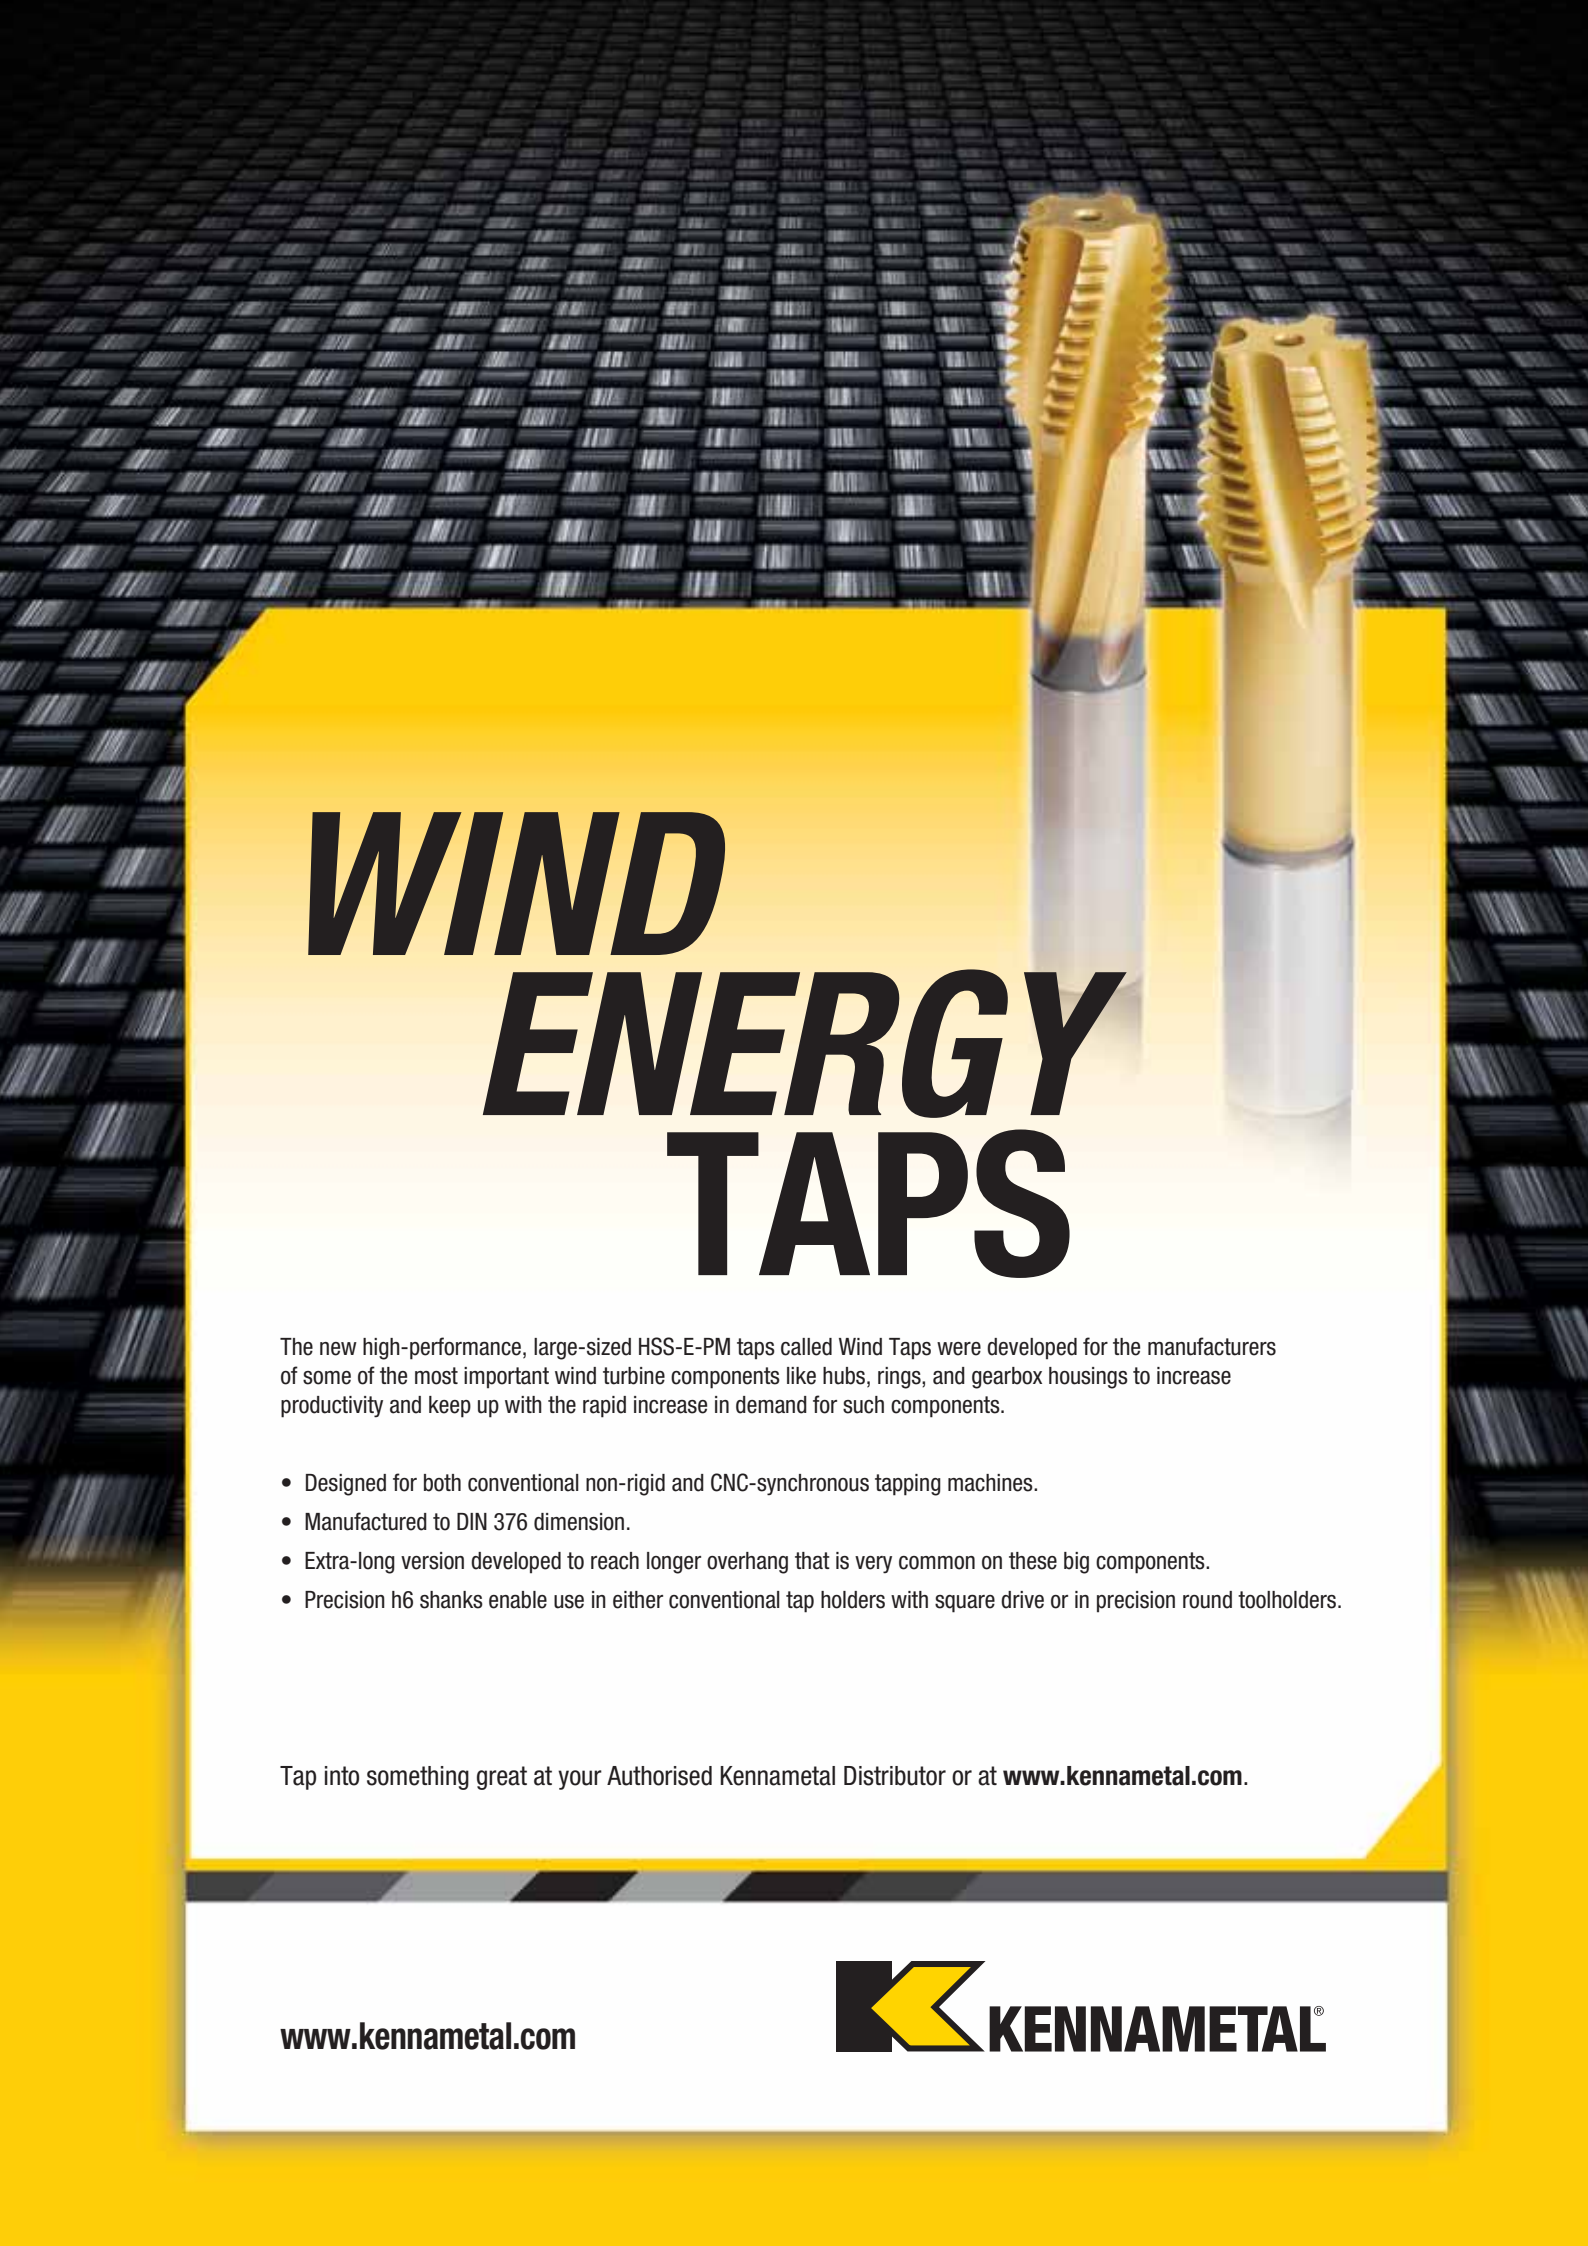
M = Metric coarse-pitch thread (ISO form)
MF = Metric fine-pitch thread (ISO form)
NC = Unified coarse series thread
NF = Unified fine series thread

A = ANSI
D1 = DIN 371
D4 = DIN 374
D6 = DIN 376
D74 = DIN 3174
J = JIS
XL = DIN extra length

Style

T620 = Steel and stainless steel, through holes, LH spiral flute, solid
T621 = Steel and stainless steel, through holes, LH spiral flute, coolant
T630 = Steel and stainless steel, blind holes, RH spiral flute, solid
T631 = Steel and stainless steel, blind holes, RH spiral flute, coolant
T640 = Cast iron, through and blind holes, straight flute, solid
T641 = Cast iron, through and blind holes, straight flute, coolant

NOTE: Other taps styles, see page L31.



WIND ENERGY TAPS

The new high-performance, large-sized HSS-E-PM taps called Wind Taps were developed for the manufacturers of some of the most important wind turbine components like hubs, rings, and gearbox housings to increase productivity and keep up with the rapid increase in demand for such components.

- Designed for both conventional non-rigid and CNC-synchronous tapping machines.
- Manufactured to DIN 376 dimension.
- Extra-long version developed to reach longer overhang that is very common on these big components.
- Precision h6 shanks enable use in either conventional tap holders with square drive or in precision round toolholders.

Wind Energy Taps

Primary Application

The new high-performance, large-sized HSS-E-PM Wind Taps were developed for manufacturers of some of the most important wind turbine components to increase productivity because of increased demand and can be used in conventional non-rigid and CNC-synchronous tapping machines. These Wind Taps are manufactured to DIN 376 dimensions and an extra-long version is available to reach the longer overhang that is common on these big components.

The precision h6 shanks enable use in either conventional tap holders with square drive or in precision round holders.

Features and Benefits

T620 LH Spiral Flute

- For through hole tapping.
- Push chips ahead, enabling free tapping on long chipping material.
- Form D plug chamfer.
- DIN 376 and extra-long versions available.

T630 RH Spiral Flute

- For blind hole tapping.
- Preferred for vertical tapping application.
- Form D plug chamfer.
- Internal coolant available as standard; see T631.
- DIN 376 and extra-long versions available.

T650 RH Spiral Flute

- For blind hole tapping.
- Preferred for horizontal tapping application.
- Form D plug chamfer.
- Internal coolant available as standard; see T651.
- DIN 376 and extra-long versions available.

T650 HSS-E-PM • Proven Solution

Case study:

- Manufacturer of large diameter bearing for wind turbines.

Conditions:

- Thread size: M24 x 2.5 6H
- Workpiece: bearing ring
- Material: low-carbon steel 1010 (C10)
- Thread depth: 35mm blind
- Tap drill size: 17,5mm
- Machine: CNC
- Coolant: water soluble

NOTE: Increase speed by up to 25% when using coolant taps (T621,T623,T631,T633,T641,T643,T651).
Use grade KP6505™ in steels. Use 50% of the recommended speed listed for grade KP6525™.

Looking for a product that's not shown in this catalogue?

Check the Kennametal website!

Online product catalogue available 24/7

Visit **http://www.kennametal.com/holemaking/** to browse our electronic catalogue any time you're looking for Kennametal's best tooling solutions. It's fast, free, and always available. The online e-catalogue is updated weekly with products and solutions for milling, turning, holemaking, and tooling systems applications.

High-Performance Solid Carbide Thread Mills

Primary Application

Our solid thread mills are designed to deliver high-quality internal threading on 3-axis CNC machines. Because these mills are made of carbide, they are capable of easily cutting most difficult materials up to 63 HRC. Thread mills make interrupted cuts and short chips.

The combination of these design elements offers a range of benefits to improve overall thread quality and tool production. Short, easily evacuated chips generate less heat and friction, so there is a lower risk of damage to threading. Also, the superior carbide grades make threading easier and machining times shorter.

Features and Benefits

System Requirements

- 3-axis CNC machine.
- Good clamping for tool and workpiece.
- Internal coolant supply.

Features

- Interrupted cuts.
- Short chips.
- Optimised carbide grades.
- Drill, thread, countersink.

Advantages

- Versatile.
- Better surface quality.
- No chip problems.
- No need to reverse the spindle.
- More production safety.

Milling Methods

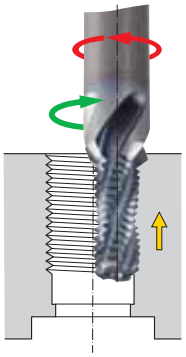
Climb Milling

Properties:

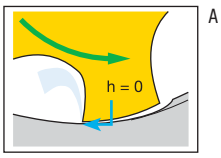
- Tool rotation direction clockwise
- Tool moves anti-clockwise
- Pitch “upwards”

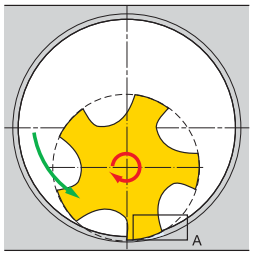
↓

- Right-hand thread



Climb milling is always when the cutting edge goes out of the material with a chip thickness h = 0





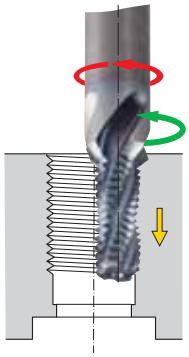
Conventional Milling

Properties:

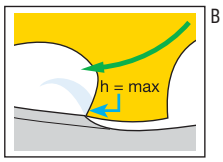
- Tool rotation direction clockwise
- Tool moves clockwise
- Pitch “downwards”

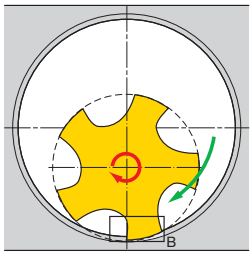
↓

- Right-hand thread



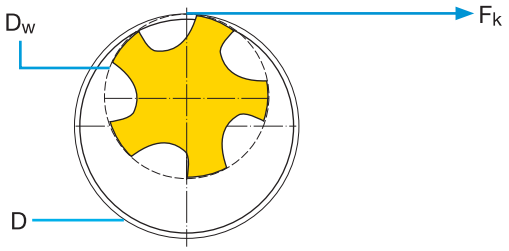
Conventional milling is always when the cutting edge goes out of the material with a chip thickness h = max





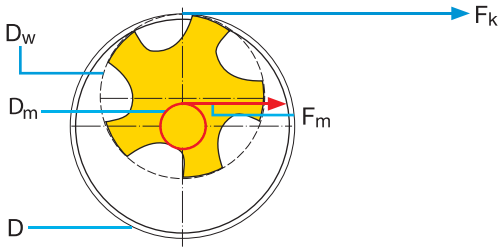
Counter Feed F_k

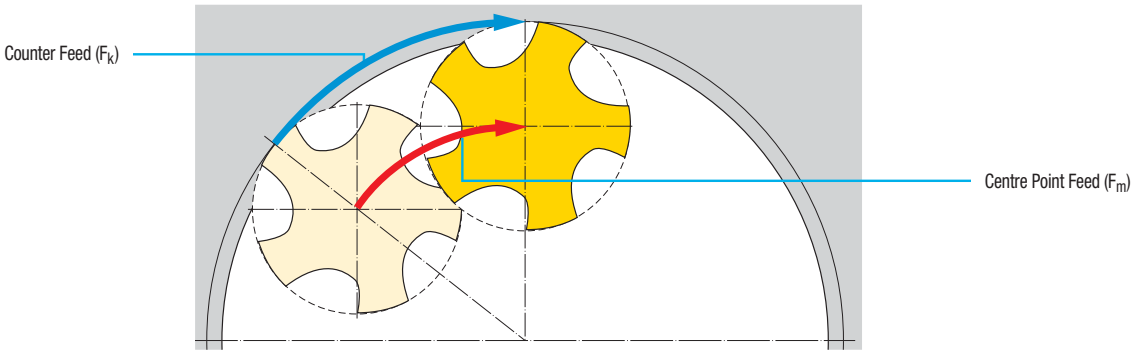
$$F_k = n \cdot f_z \cdot Z \text{ [mm/min]}$$



Centre Point Feed F_m

$$F_m = \frac{F_k \cdot (D-D_w)}{D} \text{ [mm/min]}$$





D_w = Tool diameter [mm]
n = RPM [min^{-1}]
f_z = Feed per tooth [mm]
Z = Number of teeth on tool (radial)
D = Nominal diameter of thread = Diameter of external contour [mm]
D_m = Diameter of the centre point (D-D_w) [mm]

Drill Thread Mill TM741 • Right Hand

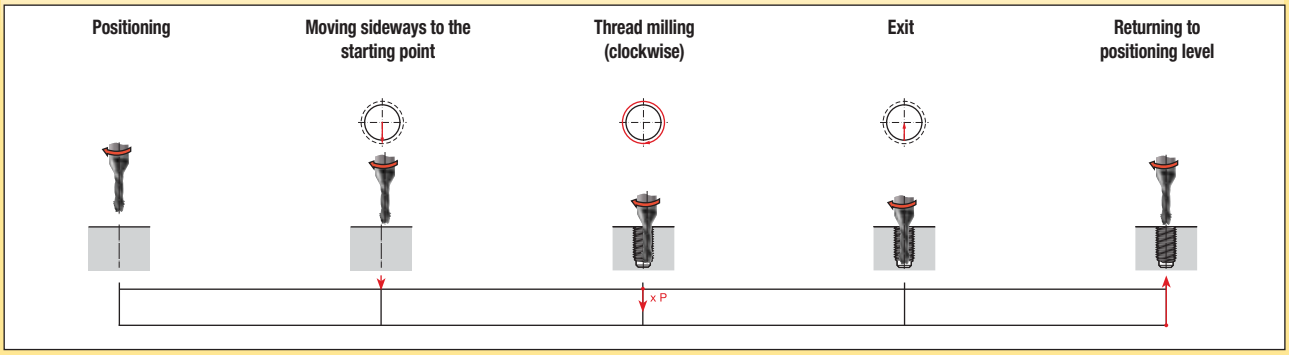
Preparation

None

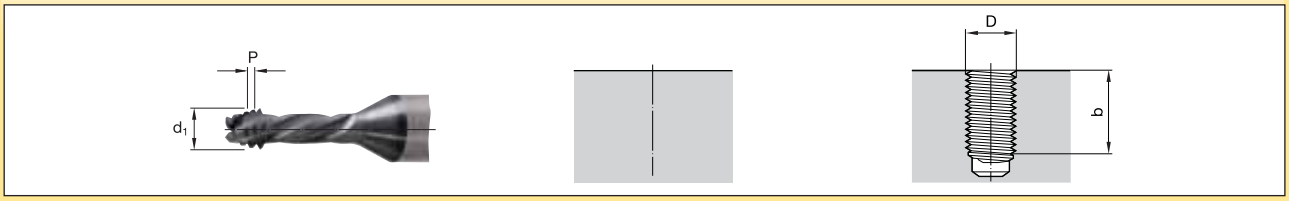
Process Principle

Milling thread and core hole, countersinking (conventional milling)

Cycle



Required Specification Values



Example

Size — M10-6H
Thread diameter D 10mm
Pitch P 1,5mm
Core hole diameter D_1 .....8,5mm

Material — Hard steel, 50 HRC

Grade — KCU36

Tool — TM741 Right Hand
Catalogue number TM741M100X150R2DHA
Number of teeth Z 4
Tool diameter d_1 .....7,75mm*
Tool radius compensation k [1] 0,08mm**
Tool radius to be programmed [2] 3,795mm***
Thread depth b 20mm
Cutting speed v_c .....100 m/min
Feed (milling) f_z .....0,04 mm/tooth
Number of turns [5] 17

*(measured on the cutting part) **0,01 x D; adjust to application ***(1/2 d_1 - k)

$$N = \frac{V_c \cdot 1000}{d_1 \cdot \pi} \qquad S = 4109$$

$$v_f = f_z \cdot Z \cdot n \qquad F = 657 \text{ (contour)}$$

$$N = \frac{v_f \text{ contour} \cdot (D-d_1)}{D} \qquad F = 148 \text{ (centre point)}$$

Program to DIN 66025 (conventional milling, on the contour, incremental)

Positioning the tool	N 10	G 54	G 90	G 00	X…	Y…	Z 1.500	S 4109	T01 [2]	M03 [6]

Cutting time t_h

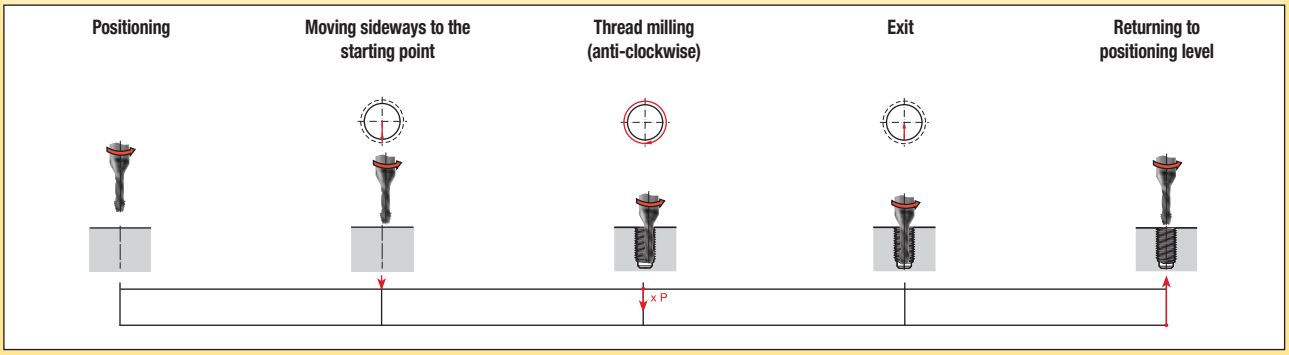
51,6 seconds

NOTES:
[1] The cutter radius measured over the tooth crests of the threaded part must be reduced by the amount of the cutter radius compensation. This is necessary to achieve a depth of cut to the middle of the 6H/ISO2 nut tolerance. Please note, however, that this also depends on the radial deflection of the tool (tensile strength of the material, projecting length of the tool).
[2] The cutter radius to be programmed is normally included in the tool memory.
[3] The thread depth b must be divisible by the thread pitch P.
[4] The feed values in brackets must be used for controllers, which do not calculate the centre point feed themselves.
[5] **Set N40 must be repeated with the number of threads.** Repetitions N = thread depth b/pitch P (rounded up to the nearest integer).

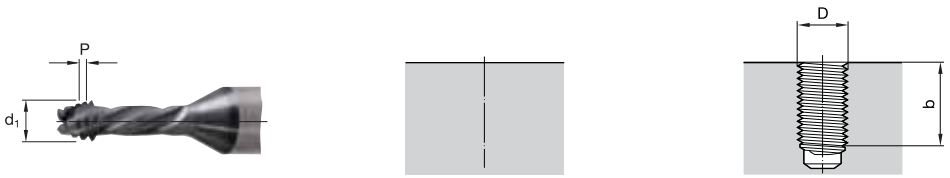
Drill Thread Mill TM741 • Left Hand

Preparation	None
Process Principle	Milling thread and core hole, countersinking (climb milling)

Cycle



Required Specification Values



Example

Size — M10-6H
Thread diameter D 10mm
Pitch P 1,5mm
Core hole diameter D_1 .....8,5mm

Material — TiAl6V4 titanium

Grade — KCU36

Tool — TM741 Left Hand
Catalogue number TM741M100X150L2DHA
Number of teeth Z 4
Tool diameter d_1 .....7,75mm*
Tool radius compensation k [1] 0,08mm**
Tool radius to be programmed [2] 3,795mm***
Drilling/countersink depth l_E 20mm
Cutting speed v_c .....100 m/min
Feed (milling) f_z .....0,03 mm/tooth
Number of turns [5] 17

*(measured on the cutting part) **(0,01 x D) ***(1/2 d_1 - k)

$$N = \frac{V_c \cdot 1000}{d_1 \cdot \pi} \qquad S = 4109$$

Taps and Thread Milling Technical Information

The technical information in the following section can be used to assist you with your tapping and thread milling operations. Whether you are simply searching for information about tap dimensions and recommendations, or you're trying to solve basic tapping and thread milling problems, you will find the relevant data here.

This Section Includes the Following Information:

- Illustrations of tap terms.
- Explanations of tap chamfers.
- Dimensional information for various tap styles and lengths.
- Tap limitation data.
- Chip handling methods for different tap styles.
- Tap recommendations.
- Descriptions of screw thread tolerance and tolerance information.
- Information regarding surface treatments and coatings.
- Guidelines and tables for determining tapping speeds.
- Troubleshooting charts.
- Hardness conversion table.
- A guide to Kennametal tapping application icons.
- Taps custom order worksheet.
- Thread Milling application sheet.

This section will further your knowledge of tapping and thread milling operations enabling you to maximise the value of your tools.

How to Apply This Technical Information

Below is an example of where the technical information in this catalogue can be useful:

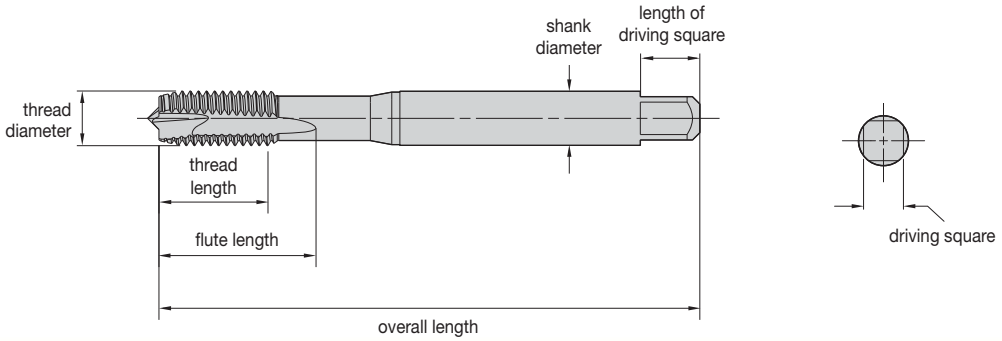
Problem

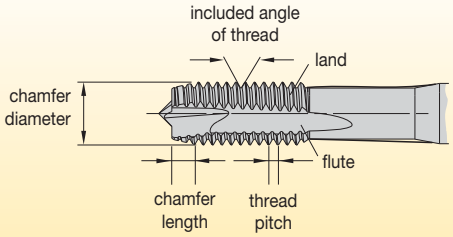
- Thread holes are oversized and taps are experiencing low life when working with stainless steel materials.

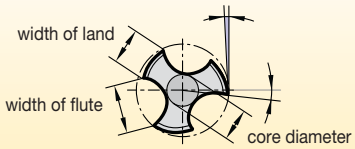
Solution

- Consult the troubleshooting portion of the Technical Information section to discover ways to correct the issue.

Definitions and Angles, Centres and Flute Forms







Flute Forms

Straight flute, form C plug chamfer **without spiral point**

Right-hand spiral flute

Straight flute, form B plug chamfer **with spiral point**

Left-hand spiral flute

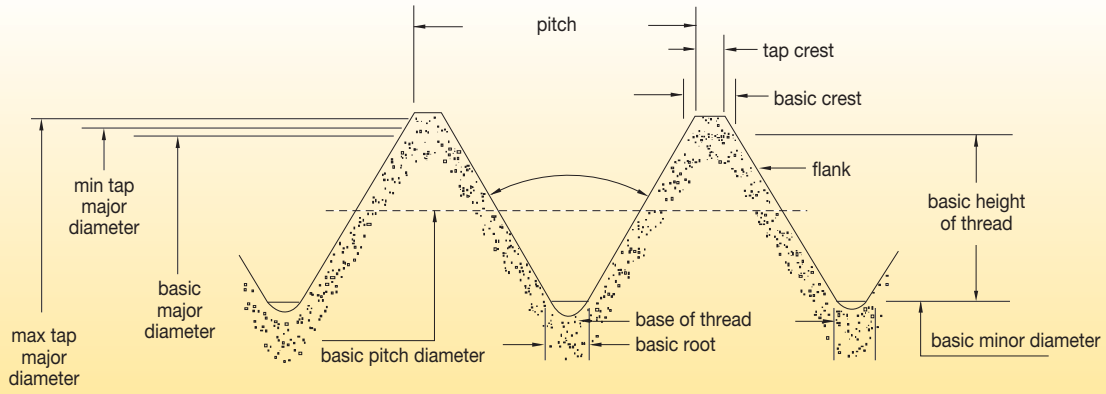
Types of Centres (Standard to DIN 2197/DIN 2175)

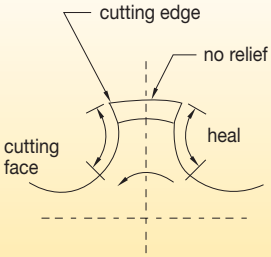
centre on thread section			
tap diameter range			
≤M10, 3/8 bottom or semi-bottom chamfer	≤M10, 3/8 plug chamfer	>M10, 3/8 all chamfers	
			external centre removed	full external centre	partial external centre	internal centre

Coolant Hole Types

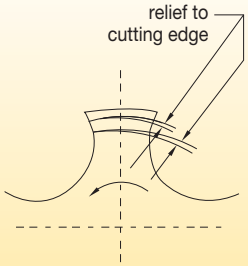
Axial coolant delivery with axial coolant exit hole

Axial coolant delivery with radial coolant hole exiting in the flutes

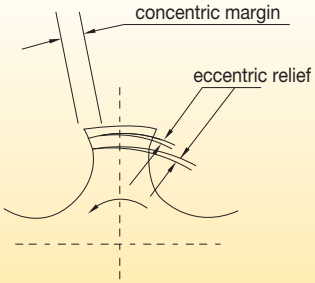




Concentric



Eccentric Relief



Con-Eccentric Relief

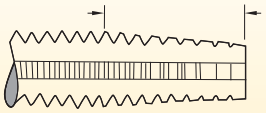
Tap Chamfers • DIN Taps

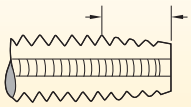
Taper Chamfer
7–10 Pitches



Form A (6–8 pitches)

The Form A chamfer has the longest standard chamfer ensuring easier starting. It provides the longest life because of more working teeth.

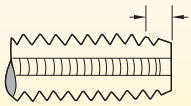
Plug Chamfer
3–5 Pitches



Form B/D (3,5–5 pitches)

The most common chamfers for use by hand or machine in through hole. Form B applies to spiral-point taps, and Form D applies to straight-flute and spiral-flute taps. This chamfer is more efficient than a Form E or Form C chamfers.

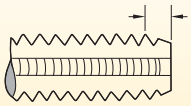
Semi-Bottoming Chamfer
2–3 Pitches



Form C (2–3 pitches)

This short chamfer enables threading close to the bottom of blind holes. Due to the slightly longer chamfer and more working teeth, this chamfer is more efficient than a Form E chamfer.

Full Bottoming Chamfer
1–2 Pitches



Form E (2–3 pitches)

For threading close to the bottom of blind holes, the Form E chamfer is the least efficient chamfer available.

Through Holes
Push Chips

Spiral Point LHSF

- Spiral point or LHSF (Left-Hand Spiral Flute).
- Ideal for materials with long chips.

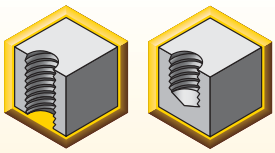
Blind Holes
Pull Chips

RHSF

- RHSF (Right-Hand Spiral Flute).
- Ideal for materials with long chips.

Blind or Through Holes
Store Chips

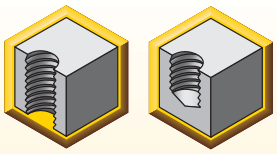
STFL



- STFL (Straight Flute).
- Ideal for materials with short chips.

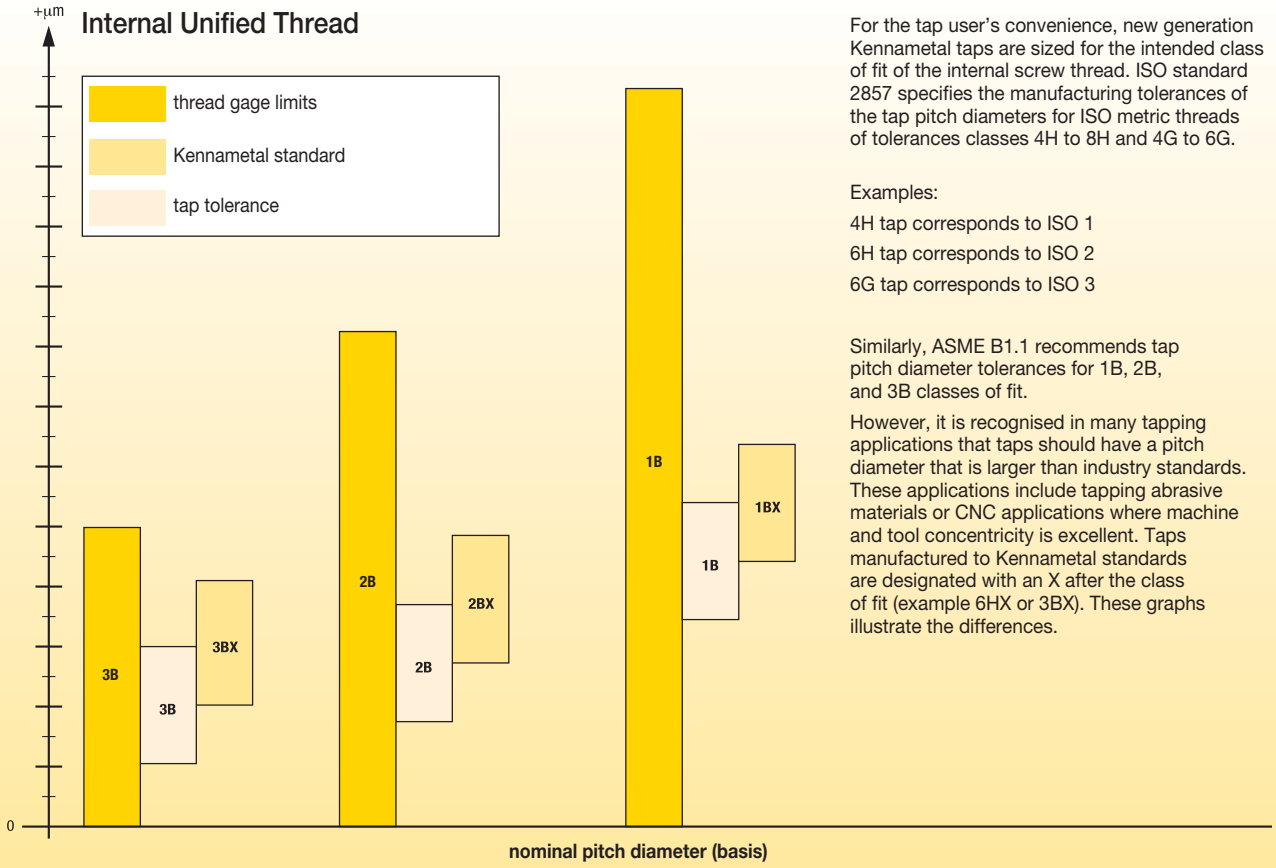
Blind or Through Holes
No Chips

Forming



- Forming.
- Ideal for ductile materials <32 HRC.

Internal Unified Thread



For the tap user's convenience, new generation Kennametal taps are sized for the intended class of fit of the internal screw thread. ISO standard 2857 specifies the manufacturing tolerances of the tap pitch diameters for ISO metric threads of tolerances classes 4H to 8H and 4G to 6G.

Examples:

4H tap corresponds to ISO 1

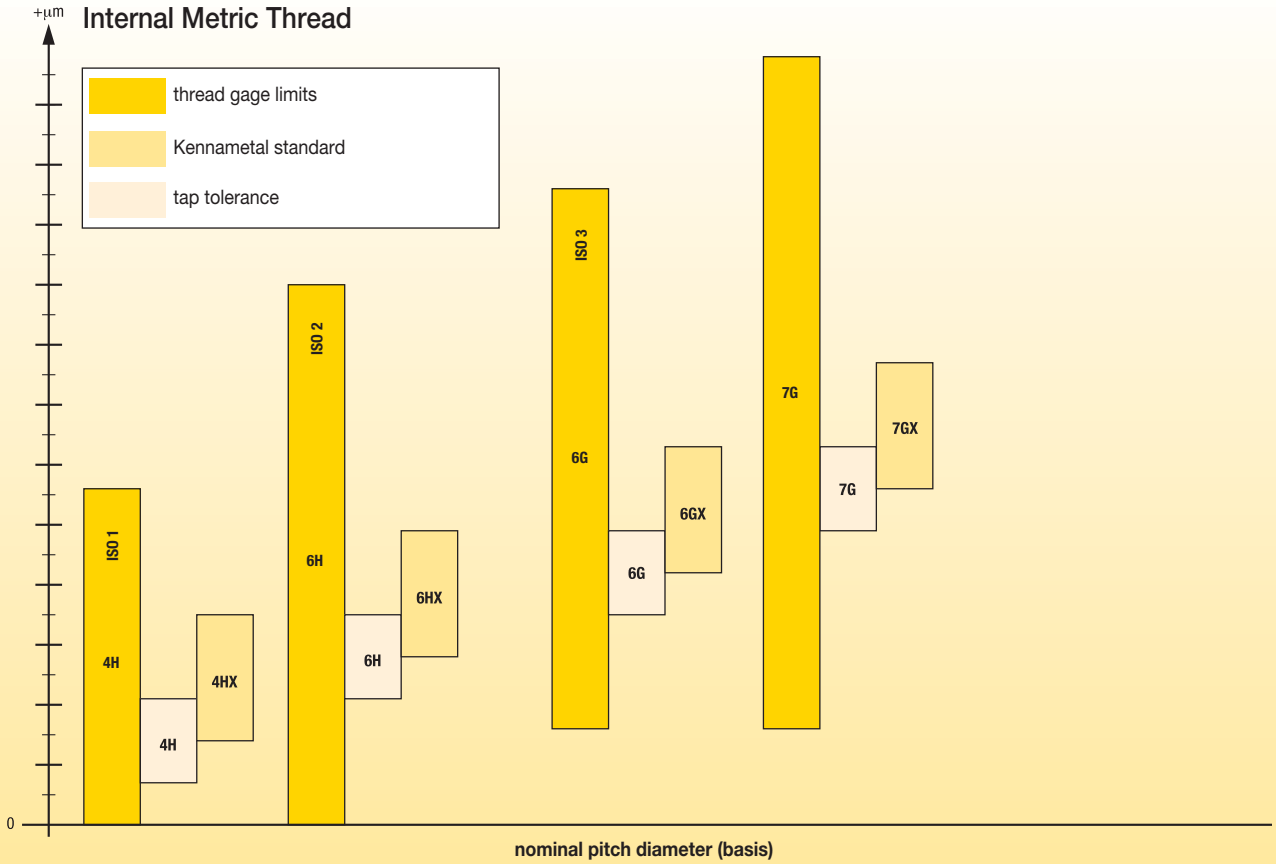
6H tap corresponds to ISO 2

6G tap corresponds to ISO 3

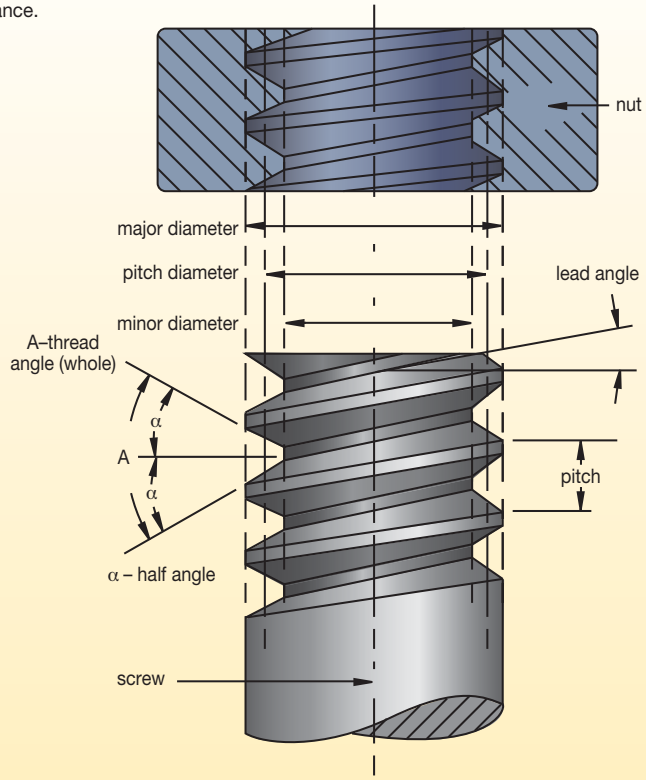
Similarly, ASME B1.1 recommends tap pitch diameter tolerances for 1B, 2B, and 3B classes of fit.

However, it is recognised in many tapping applications that taps should have a pitch diameter that is larger than industry standards. These applications include tapping abrasive materials or CNC applications where machine and tool concentricity is excellent. Taps manufactured to Kennametal standards are designated with an X after the class of fit (example 6HX or 3BX). These graphs illustrate the differences.

Internal Metric Thread



It is generally recognised that, in mass production, it is impossible to reproduce in exact detail the theoretically perfect product as laid out on the drawing board. The allowed slight variation between the theoretically perfect product drawing and each unit of the actual product is called the tolerance.



Allowance

An intentional difference in correlated dimensions of mating parts. It is the minimum clearance or maximum interference between such parts.

Angle of Thread

The angle included between the flanks of the thread measured in an axial plane

Half Angle of Thread

The angle included between a flank of the thread and the normal (90°) to the axis, measured in an axial plane.

Lead of Thread

The distance a screw thread advances axially in one turn. On a single-thread screw, the lead and pitch are identical. On a double thread, the lead is 2x pitch; on a triple thread, the lead is 3x pitch, etc.

Major Diameter

The largest diameter of a straight-screw thread.

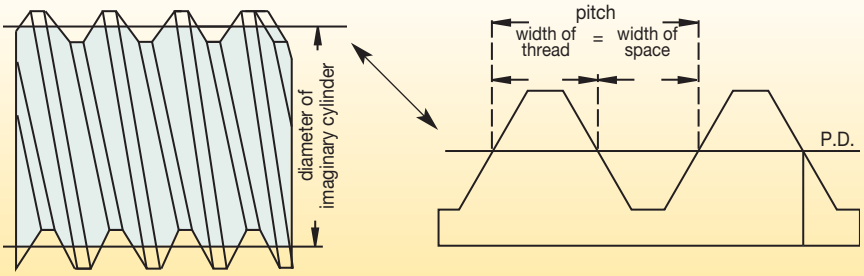
Minor Diameter

The smallest diameter of a straight-screw thread.

Pitch

The distance from a point on a screw thread to a corresponding point on the next thread measured parallel to the axis.

The pitch in inches = $\frac{1}{\text{number of threads per inch}}$



Pitch Diameter

On a straight-screw thread, the diameter of an imaginary cylinder that would pass through the threads at such points as to make equal the width of the threads and the width of the spaces cut by the surface of the cylinder.

More than just the right tool • the ultimate solution.

That's **Beyond BLAST.**™

That's **Different Thinking.**

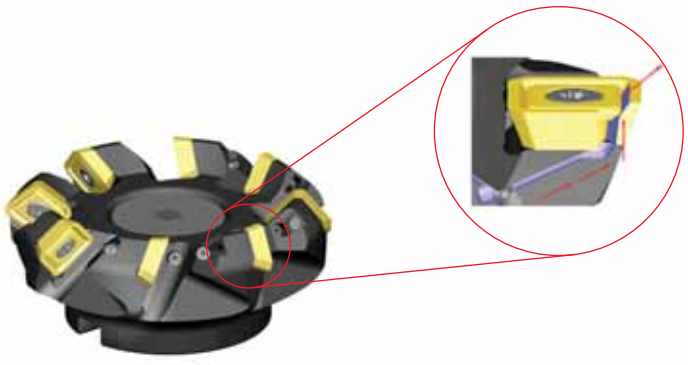
At Kennametal, innovation follows vision. Our revolutionary products and services are inspired by asking "what if?" The solutions that follow — like our Beyond BLAST through-coolant inserts — deliver remarkable results in the world's most demanding machining environments.

A cutting-edge insert that delivers coolant precisely at the cutting edge. Now that's Different Thinking. That's Kennametal.

To learn more about your productivity gains using Beyond BLAST technology, visit www.kennametal.com.

Milling

- Beyond BLAST technology uses low-pressure conditions to offer many of the high-pressure performance benefits.
- Delivers superior performance on titanium, using either high- or low-pressure coolant systems.
- Effective thermal management results in reduced cutting temperatures, improved lubricity, superior chip control, and longer tool life.
- Beyond BLAST for milling increases tool life by up to 100% compared with conventional coolant delivery systems.



beyond™ BLAST™

Factors when trying to determine the best tapping speeds:

- Material to be tapped
- Length of chamfer on tap
- Percentage of full thread to be cut
- Length of hole (depth of thread)
- Pitch of thread
- Cutting fluids
- Machine equipment
- Horizontal or vertical tapping

The best and most efficient operating speeds for taps cannot be calculated with the same certainty, as for many other metalcutting tools.

With other tools, the feed per revolution can be set at any desired point and can be varied as conditions demand. Taps, on the other hand, must always be advanced at a rate equal to one pitch for every revolution, or one lead in the case of multistart threads.

The style of tap may vary the conditions. For example, with a bottoming tap, the chamfer cuts a heavy chip, while with a taper tap, the chamfer cuts a very thin chip.

The depth of thread also varies, depending on the pitch. The coarser the thread, the greater the advance of the tap per revolution and the greater the amount of material removed.

The method of feeding the tap, and the type of equipment for driving, also influences the permissible speeds. If taps are mechanically fed at the proper rate of advance, they can be operated at higher speeds than if used with flexible tapping holders on machines with poor feed control.

Speeds may be modified to take into account any or all of these factors:

- Speeds must be lowered as length of thread increases because, in deep thread holes, the accumulated chips increase friction and interfere with lubrication.
- Bottoming taps must be run slower than plug taps.
- Tapping full height of thread calls for slower speed than if the commercial 75% height only is required.
- Coarse-thread taps in the larger diameters should be run more slowly than fine-thread taps of the same diameters.
- The quantity and quality of cutting fluid may affect the permissible speeds as much as 100%.
- Taper threaded taps, such as pipe taps, should be operated from 1/2–3/4 the speed of a straight thread tap of comparable major diameter.
- Increase the speed of coolant taps up to 25%.

RPM Formulas

SFM = Surface Feet per Minute

RPM = Revolutions per Minute

IPM = Inches per Minute

TPI = Threads per Inch

S m/min = Surface Metres per Minute

$\Pi = 3.1416$

mm/min = millimetres per minute

P = Pitch (1/number of threads per inch)

Inch Sizes

$$SFM = \frac{RPM \times \text{tool diameter}}{3.82} \quad \text{or} \quad 0.26 \times RPM \times \text{tool diameter}$$

$$RPM = \frac{3.82 \times SFM}{\text{tool diameter}}$$

$$IPM = \frac{RPM}{TPI^*} \quad \text{or} \quad {}^*P \times RPM$$

Metric Sizes

$$S\ m/min = \frac{\Pi \times \text{tool diameter} \times RPM}{1000}$$

$$RPM = \frac{mm/min \times 1000}{\Pi \times \text{tool diameter}}$$

$$mm/min = mm\ P \times RPM$$

Partial List of Solutions to Tapping Problems

application	symptom	common cause	remedy
general	gage out of limits	tap size and gage mismatch	select tap size for gage
	oversize thread	alignment, spindle feed	correct
	oversize at top	runout or alignment	correct
	go gage binds part way	worn tool, tap cuts off lead	replace tap, synchronous holder
	thread shaving	feed error, high axial force	program, synchronous holder
	chipping	high cutting force, worn tap	tap geometry, replace tap
	breakage	chip jamming flutes	tap geometry, tapping depth
	–	worn tool, high torque	replace tap with new tool
	short life, low speed	excessive wear	SC or HSS-E-PM HP taps
steel	birdnest blind hole	long, ductile chips	GT30 GP6505 (oxide), peck feed
	chipping	high material hardness	GT00, GT02 WP31MG (TiN)
	breakage in blind holes	hole depth >2D, chip jamming	GT04 WH36MG (TiN/MoS_2)
stainless steel	oversize thread, low life	galling	GT20, GT30 GM6515 (TiN-CrC/C)
	short life	work hardened core hole	replace drill
cast iron	excessive wear	abrasion	GT40 GP6520 (TiCN)
aluminium, cast	excessive wear	high silicon	GT40 GP6520 (TiCN)
aluminium, wrought	oversize thread	galling	GT70, GT80 WN48EG (DLC)
nickel, cobalt alloys	short life	high cutting temperature	GT10, GT12 WS32MG (TiCN)
titanium	short life	high cutting temperature	GT14, GT16 WN35MG (TiN-DLC)

Thread Mills

	vibration marks	major crest wear	edge chipping	cone shaped thread	entry marks

Tap Custom-Order Worksheet

Use this Custom-Order Worksheet to modify an existing product to meet your specifications. If your custom requirements do not fall into these categories, simply contact your Kennametal Distributor.

Trust our experienced distributors and Kennametal engineering team to design the best solution for you.

1. Start with the standard product most similar to your specifications:

catalogue number _____ **grade/coating** _____

2. Type of tap needed:

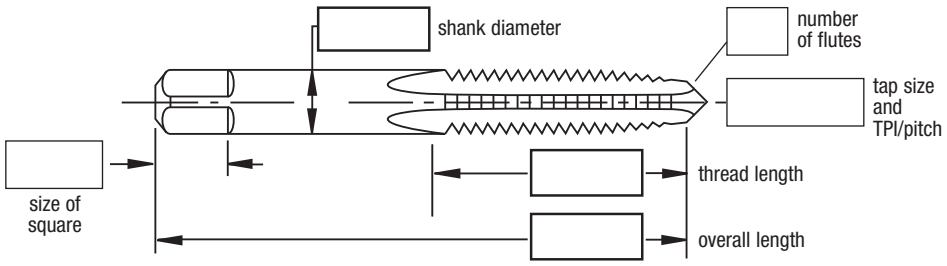
☐ solid carbide ☐ high performance HSS ☐ general purpose ☐ spiral point
☐ hand ☐ forming ☐ spiral flute
_____ pipe (and style) _____ other

3. Direction of cut (circle one)**:** left hand right hand

4. Material overview:

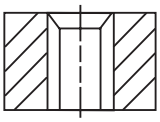
☐ ANSI ☐ DIN ☐ JIS ☐ other

5. Desired dimension:

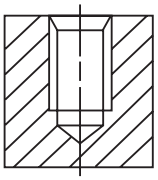


6. Choose one:

through hole:
hole diameter _____
hole depth _____



blind hole:
hole diameter _____
hole depth _____



7. Chamfer:

☐ taper: 7–10 pitch ☐ plug: 3–5 pitch ☐ semi-bottom: 2–3 pitch ☐ bottom: 1–2 pitch

8. Class of fit: **H limit** _____ **metric D limit** _____ **diameter pitch limit** _____

9. Workpiece material: _____

10. Hardness: _____

11. Number of taps required: _____

12. Price
Contact your Authorised Kennametal Distributor partners.

13. Other comments or special characteristics:

Coatings provide high-speed capability and are engineered for roughing to finishing.

P	Steel
M	Stainless Steel
K	Cast Iron
N	Non-Ferrous Materials
S	High-Temp Alloys
H	Hardened Materials

Grade

Coating		Grade Description	wear resistance ⟷ toughness: 05 10 15 20 25 30 35 40 45
K600		Carbide grade made from high-quality, micrograin materials for cutting all types of workpiece materials. Very high toughness ensures a controlled wear rate. The micrograin structure enables extremely sharp cutting edges.	N
KCPM15		Coated carbide grade with thick PVD coating and optimised chemistry and process for increased wear resistance. Outstanding protection in milling stainless steel to mitigate crater, DOCN (depth-of-cut notching), and flank wear. Excellent performance up to 52 HRC. beyond	P M K
KC643M		Coated fine-grain grade with PVD (AlTiN). KC643M is a hard PVD coating particularly suitable for cutting steel, cast iron, stainless steel (wet), and titanium (wet). This grade can be used for materials with hardness up to 52 HRC.	P M K S
KC633M		Coated carbide grade with PVD multilayer coating. KC633M is designed for dry milling most types of material, apart from the hardened variety. This grade is characterised by good hardness and wear resistance. It provides outstanding protection for solid carbide tools against cratering and abrasion.	P M S
KC625M		Coated carbide grade with PVD (TiCN) coating. For universal use due to its high wear resistance and hardness. Only use wet or with MQL (Minimum Quantity Lubrication).	P K S
KC639M		PVD (AlTiN) coated carbide on a new sub-micron carbide substrate. This hard coating provides outstanding performance in milling hardened materials (58–65 HRC).	H
KC637M		Coated, tough, wear-resistant carbide grade with hard PVD coating, particularly suitable for machining steels above 48 HRC.	H
KC635M		Universal carbide grade with PVD coating (TiAlN). KC635M is a high-performance grade for finishing operations. This grade is characterised by high hardness and wear resistance.	P M K S
KCN05		**High-Performance Grade** A pure, diamond-coated carbide for milling CFRP and graphite. It is a very tough and wear-resistant grade.	N

Beyond™ Solid End Milling

High-Performance milling in a new dimension

Kennametal is pleased to announce KCPM15™ — the first Beyond grade for solid carbide end mills. KCPM15 features an improved high-performance carbide substrate with proprietary aluminium titanium nitride (AlTiN) PVD coating.

Features and Benefits

- Engineered to increase tool life and productivity by 30%.
- For use in milling steels and stainless steels.
- Improved resistance to cratering, flank wear, and depth-of-cut notching.

Workpiece Materials:

P	Steel
M	Stainless Steel
K	Cast Iron

Coating		Grade Description	
KCPM15	AlTiN	Coated carbide grade with thick PVD coating and optimised chemistry and process for increased wear resistance. Outstanding protection in milling stainless steel to mitigate crater, DOCN (depth-of-cut notching), and flank wear. Excellent performance up to 52 HRC.	P M K

HARVI™ Line Solid Carbide End Mills

Primary Application

HARVI takes high-performance roughing, semi-finishing, slotting, and profiling to the next level. The line is designed to provide maximum metal removal rates by achieving supreme surface conditions. A wide range of diameters and corner radii are available from stock.

NOTE: Unequal flute spacing.

Features and Benefits

Higher Productivity and Profitability

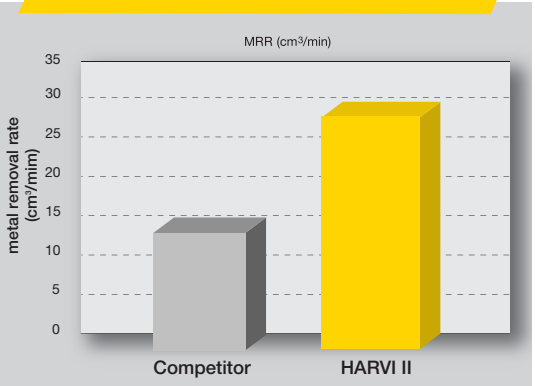
- Best suited for applications in the aerospace, medical, die and mould, automotive, and general engineering markets.
- Outstanding performance in stainless steel, titanium, INCONEL®, and other high-temperature alloys and steels.
- Increased metal removal rates in roughing and finishing operations.
- Excellent performance in both slotting and side milling operations.

Featured Application: Slotting an Engine Ring

Operation: Slotting
Customer: Aerospace manufacturer
Workpiece: Engine ring
Material: SST nickel-based alloy EZ3NCT25 (25% nickel, 13% chromium) at 245 HB
Solution: HARVI II™ 5-flute with AlTiN coating
Results: 90% increase in metal removal rate

	COMPETITOR	HARVI II™
coating:	TiAlN	AlTiN
end mill:	4-flute 12mm 1mm radius	5-flute 12mm 1mm radius
material:	SST nickel-based alloy	SST nickel-based alloy
depth of cut (ap):	11,15mm	11,15mm
width of cut (ae):	12mm	12mm
speed (vc):	30 m/min	40 m/min
RPM (N):	800 RPM	1,060 RPM
feed rate (vf):	112 mm/min	212 mm/min
chip load per tooth (fz):	0,035 mm/th	0,04 mm/th
metal removal rate:	15 cm^3/min	28 cm^3/min

90% Productivity Increase!



- Centre cutting.
- Single tool for roughing and finishing applications.
- Unequal flute spacing minimises chatter for smoother machining.

High-Performance Solid Carbide End Mills

SAFE-λOCK™
by HAIMER

In High-Performance Cutting (HPC), slow microcreeping can cause the cutting tool to be pulled out of the chuck, **turning high-quality workpieces to scrap.**

Be on the Safe Side with SAFE-λOCK™ in High-Performance Cutting (HPC)

Benefits

- Highly accurate clamping due to positive connection.
- No loss of accuracy.
- No pull out or spinning of the tool.
- No damage to the workpiece or machine.
- Groove on tool shank is directed so the tool will be pulled into the chuck (depending on direction of rotation).

Order Information

Kennametal high-performance end mills with a shank diameter of 12mm (1/2") and larger are available with **SAFE-λOCK™** technology, as a special tool, upon request. Please contact your local customer service location to receive a quote.

Features

- Form-closed clamping.
- High accuracy clamping.
- Helical grooves.

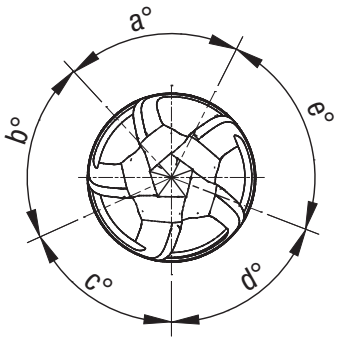
Functions

- No pull out.
- Excellent runout.
- Adjustable clamping length.

Benefits

- Reduce scrap rate.
- Higher tool life.
- No need to change NC programme after regrinding.

Customised-Solution Example for Highest Metal Removal Rates



The HARVI II UDDE proprietary design with **unequal flute spacing** and unique core geometry for chatter-free machining enables slotting operations in titanium up to 1 x D.

SAFE-λOCK™

The safety belt for high-performance solid carbide end mills provides a form-closed clamping with high accuracy and helical grooves for length adjustment.

* For the above cutting data, do not exceed an overall ae of 0,8mm.

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
Above parameters are based on ideal conditions. For smaller taper machinining centers, please adjust parameters accordingly on >12mm diameter.

KenFeed™ End Mills for High-Feed Milling

Primary Application

Specifically engineered to machine hardened steel up to 65 HRC at extreme speeds and feeds.

Features and Benefits

- Unique tool with new 6-flute style for high productivity.
- Necked shanks provide extended reach in deep cavities.
- High-feed rates up to 0,6mm per tooth on a 20mm tool.
- Machine hardened materials at 2–3x the metal removal rate of competitive end mills.
- Wide range of cutting diameters: down to 6mm for small and medium pocket work.
- Innovative new geometry maximises metal removal rates.
- High metal removal rates lower manufacturing costs.

Featured Application: Milling a Mould

Operation: Pocket milling
Customer: Die and mould manufacturer
Workpiece: Mould
Material: AISI 4340 hardened steel (52 HRC)
Results: 3x better metal removal rate than competitive tool!
Machined at more than 3x faster feed!

	COMPETITOR	KenFeed
tool:	4-flute H/P for die and mould	KMDA1200A6ANA

Best-in-Class Performance for Machining Hard Materials

Using Kennametal Solid End Mills will:

- Reduce the number of tools needed.
- Offer excellent chip evacuation.
- Promote maximum productivity.
- Increase removal rates.
- Enable higher speeds.
- Ensure accuracy.
- Reduce manufacturing costs.
- Provide long tool life.

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.
For more information, please visit **www.kennametal.com/carbiderecycling.**

- Kennametal standard dimensions.
- Centre cutting.

NOTE: These guidelines may require possible variations to achieve optimum results.
Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
Above parameters are based on ideal conditions. For smaller taper machining centres, please adjust parameters accordingly on >12mm diameter.

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
Above parameters are based on ideal conditions. For smaller taper machining centres, please adjust parameters accordingly on >12mm diameter.

MaxiMet™ Carbide End Mills for High Metal Removal Rates and Superior Surface Finishes

Primary Application

Designed to significantly reduce machining time in aluminium! The innovative geometry designs include a wiper facet for superior surface finish on aluminium parts. MaxiMet takes roughing and finishing cuts with one tool.

Features and Benefits

Higher Productivity and Profitability

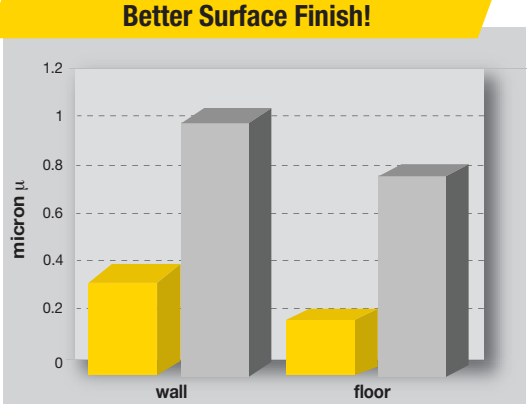
- Use only one tool for roughing and finishing operations.
- Slotting is effective up to full 1 x D axial depth. Side milling is effective up to 0,5 x D radial and 1,5 x D axial depth.
- Three-flute series uses unequal flute spacing for chatter-free performance.
- Effective in a full range of machine speeds.
- Multiple corner radii and extended neck configurations are available as standard.

Featured Application: Machining a Block

Operation: Slotting
Workpiece: Aluminium block
Material: 6061 aluminium
Solution: MaxiMet solid carbide end mill
Results: 100% better surface finish on walls and floor

	COMPETITOR	MaxiMet
grade:	uncoated tools	uncoated tools
end mill:	16mm 3-flute	16mm 3-flute MaxiMet
material:	aluminium	aluminium
depth of cut (ap):	8mm	8mm
width of cut (ae):	8mm	8mm
speed (vc):	610 m/min	610 m/min
RPM (N):	12.000 RPM	12.000 RPM
feed rate (vf):	3.600 mm/min	3.600 mm/min
chip load per tooth (fz):	0,1 mm/th	0,1 mm/th
metal removal rate:	230 cm^3/min	230 cm^3/min

MaxiMet Delivered 100% Better Surface Finish!



- Kennametal standard dimensions.
- Centre cutting.
- Effective in thin wall applications.
- Wiper facet, special end gash, and flute geometry provide better surface finishes.
- Unique geometry delivers maximum metal removal rates.

Go Beyond™ Traditional CFRP Milling Grades • Maximise Productivity with KCN05™ Solid Carbide Routers

beyond

Primary Application

Kennametal has the correct milling solutions engineered for machining difficult CFRP (Carbon-Fibre reinforced polymer) and non-ferrous components. KCN05 solid carbide router products provide excellent tool life and produce smooth finishes with improved edge quality. The unique geometries are free cutting, reduce heat generation, and provide high-quality machined surfaces.

Features and Benefits

Compression-Style Router

- Cutters are designed to provide high feed rates.
- Produce excellent quality edges on both sides on the material.
- Up-cut/down-cut geometry establishes stable cutting conditions.

Down-Cut-Style Router

- Intended for surface work.
- Great ramping capabilities for producing pockets.
- Geometry produces down forces to eliminate surface delamination.

Burr-Style Router

- Designed for trimming fibreglass and CFRP.
- Excellent temperature control.
- Good surface quality.

Ball-End-Style Router

- Specially designed for slotting and profiling.
- Excellent tool life.

- Kennametal standard dimensions.
- Through-hole capability.
- Aerospace composites and fibreglass.
- Internal air coolant for ZU=4.

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.

Looking for a product that's not shown in this catalogue?
Check the Kennametal website!

Online product catalogue available 24/7

Visit **http://www.kennametal.com/endmilling/** to browse our electronic catalogue any time you're looking for Kennametal's best tooling solutions. It's fast, free, and always available. The online e-catalogue is updated weekly with products and solutions for milling, turning, drilling, and tooling systems applications.

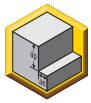
High-Performance Solid Carbide End Mills • Finishing

Features and Benefits

- Best surface finish.
- Keyway cutter portfolio.
- High helix portfolio.
- Multiflute finisher.

Applications:



Side Milling

Slotting

Workpiece Materials:

P	Steel
M	Stainless Steel
K	Cast Iron
N	Non-Ferrous Materials
S	High-Temp Alloys
H	Hardened Materials

- Kennametal standard dimensions.
- Centre cutting.

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
Above parameters are based on ideal conditions. For smaller taper machining centres, please adjust parameters accordingly on >12mm diameter.

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
Above parameters are based on ideal conditions. For smaller taper machining centres, please adjust parameters accordingly on >12mm diameter.

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

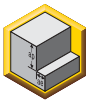
Program is not currently available in all geographical areas.
For more information, please visit **www.kennametal.com/carbiderecycling.**

High-Performance Solid Carbide End Mills • Roughing

Features and Benefits

- Highest metal removal rates.
- Innovative roughing geometries.
- End mills with internal coolant.
- Different radius styles.

Applications:



Side Milling

Slotting

Workpiece Materials:

P	Steel
M	Stainless Steel
K	Cast Iron
S	High-Temp Alloys
H	Hardened Materials

- Centre cutting.
- Semi-finishing profile.

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
Above parameters are based on ideal conditions. For smaller taper machining centres, please adjust parameters accordingly on >12mm diameter.

NOTE: These guidelines may require possible variations to achieve optimum results.
Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
For rougher tool with six flutes, use ap in slotting 60% of table value.
Above parameters are based on ideal conditions. For smaller taper machining centres, please adjust parameters accordingly on >12mm diameter.

General Application • Solid Carbide End Mills

Features and Benefits

- Wide range of diameters.
- Short, regular, long, and extra-long overall lengths.
- Different coatings.
- DIN and factory-standard end mills.

Applications:

Side Milling

Slotting

3-D Milling

Workpiece Materials:

P	Steel
M	Stainless Steel
K	Cast Iron
N	Non-Ferrous Materials
S	High-Temp Alloys
H	Hardened Materials

GOmill™ • the Economical Milling Cutter Line

Primary Application

The GOmill line is specifically engineered to work on short length-of-cut applications in multiple workpiece materials, like soft and hard steels up to 48 HRC, stainless steels, high-temperature alloys, and cast iron. With the very short overall length and soft cutting geometries, the line is made to conform to the growing market of millturn machines.

The 3-flute sharp and 4-flute chamfer versions support roughing, semi-finishing, and finishing applications. The 3-flute ball nose tool supports roughing and semi-finishing applications. The 2-flute ball nose version requires finishing applications. All three geometries work in slotting as well as side milling applications up to 1 x D depth of cut.

Features and Benefits

- Unequal flute spacing.
- AlTiN coating.
- Short overall tool length.
- Positive rake angle.
- Better surface finish and tool life.
- Universal usage on multiple workpiece materials.
- Higher cutting conditions, higher productivity, lower price due to less carbide.
- Lower power consumption.

Portfolio:

- 4-flute square end, chamfer corner, Ø 4–12mm.
- 3-flute square end, sharp corner, Ø 2–12mm.
- 3-flute ball nose, Ø 2–12mm.
- 2-flute ball nose, Ø 2–12mm.

Functions:

- Less vibrations.
- Optimum combination of hardness and toughness.
- Extremely stable.
- Soft cutting.

• Centre cutting.

- Kennametal standard dimensions.
- Centre cutting.
- Unequal flute spacing minimises chatter for smoother machining.
- Single tool for both roughing and finishing operations for fewer setups.

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
Above parameters are based on ideal conditions. For smaller taper machining centres, please adjust parameters accordingly on >12mm diameter.

High-Performance Milling Chucks

- Heavy- and fine-milling capabilities.
- Prebalanced G6.3 @ 20,000 RPM — six threaded M6 holes to accept set screws for fine balancing.
- Heavy milling — tighten locknut until O-ring on back face of locknut just touches the flange on the chuck body to achieve runout 0,01mm (.0004") 3 x D1.
- Fine milling — tighten as above, then back the locknut off 1/8–1/4 turn to achieve runout 0,005mm (.0002") 3 x D1.
- Sub-zero heat treatment for material stability.
- Through-the-toolholder coolant capability using stop screw as sealing device.
- 10mm (3/8") axial adjustment stop screw.

Indexable Inserts

The Most Advanced Milling Solutions in the Industry

For unsurpassed quality, value, and performance, you can trust Kennametal to provide the most comprehensive line of reliable metalcutting tools. Whatever your indexable milling product requirements, be assured that you will find the appropriate solution in this all-inclusive, easy-to-use guide.

For every milling application, workpiece, or equipment need, we offer the best tools on the market, designed to reduce your machining time, provide superior surface finishes, and outperform the competition.

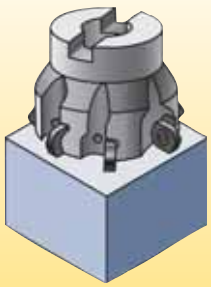
Identify material to be machined:
Each tool has a material grid marked with a letter indicating the materials that can be machined.

● first choice
○ alternate choice

P	○	Steel
M	●	Stainless Steel
K		Cast Iron
N		Non-Ferrous Materials
S	○	High-Temp Alloys
H	○	Hardened Materials

Choose your application:
- Face Milling
- Chamfer Milling
- Shoulder Milling
- Slotting
- Copy Milling
- Ceramic Milling
- Thread Milling

Face Mills



Dodeka™ Mini 15° • High-Feed — **Tool name**

Illustration of the product

Ap1: 1,60mm
Cutting Edges: 12
Dia: 25–80mm

Lead angle

k = 15°

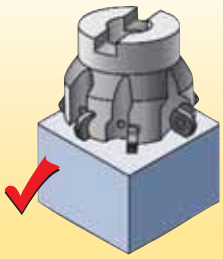
Pages: O4–O5

Location of introduction detail, tool bodies, inserts, and cutting data

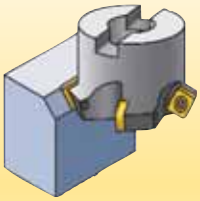
Select tool based on maximum depth of cut and diameter required:
Information is given in this area to provide specific detail as a quick reference.

How to Navigate the 2013 Catalogue

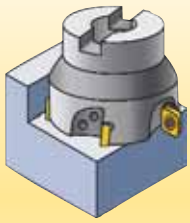
Step 1 • Select Application



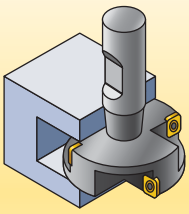
Face Milling



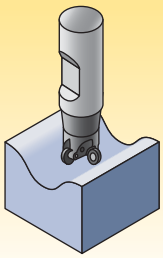
Chamfer Milling



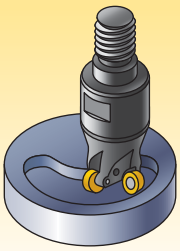
Shoulder Milling (End Milling)



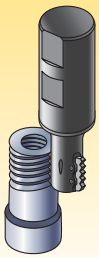
Slotting



Copy Milling



Ceramic Milling

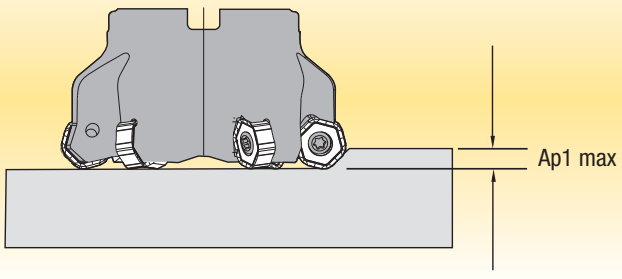


Thread Milling

Step 2 • Select Workpiece Material

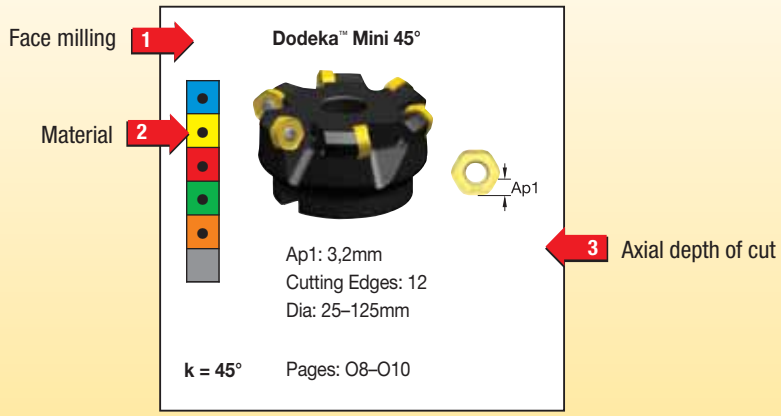
ISO Description		● first choice ○ alternate choice	Material Group	
Steel	P	●	P1–P2	Carbon steels
			P3–P4	Alloy steels and tool steels
			P5–P6	Ferritic, martensitic, and PH stainless steels
Stainless Steel	M	●	M1–M2	Austenitic stainless steels
			M3	Duplex stainless steels (ferritic and austenitic mixture)
Cast Iron	K		K1–K2	Grey, ductile, CGI, and malleable cast irons >80 KSI
			K3	Ductile, CGI, and malleable cast irons >80 KSI
Non-Ferrous Materials	N		N1–N2	Aluminium alloys <12.2% Si
			N3	Aluminium alloys >12.2% Si
High-Temp Alloys	S	●	S1–S2	Iron- and cobalt-based heat-resistant alloys
			S3	Nickel-based heat-resistant alloys
			S4	Alpha-Beta titanium alloys
Hardened Materials	H	○	H1	Hardened steels and irons

Step 3 • Select a Maximum Axial Depth of Cut (Ap)

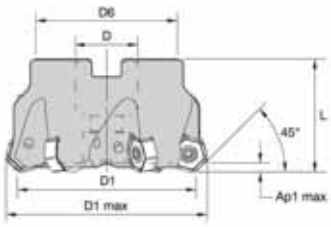


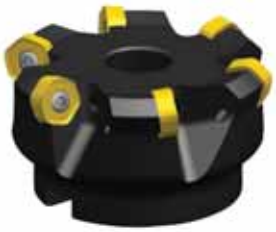
How to Navigate the 2013 Catalogue *(continued)*

Step 4 • Select Milling Cutter from Application Selector



Select the Cutter





Dodeka Mini 45° • Shell Mills

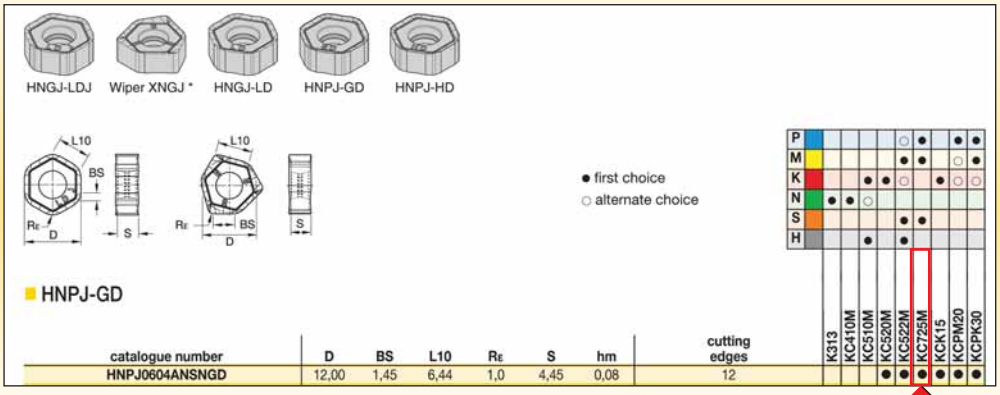
5

How to Navigate the 2013 Catalogue *(continued)*

Step 6 • Insert Chart, Providing the Inserts and Grades



HNPJ-GD

catalogue number	D	BS	L10	Rε	S	hm	cutting edges
HNPJ0604ANSNGD	12,00	1,45	6,44	1,0	4,45	0,08	12

6

Step 7 • Defining the Feed per Tooth

Geometry (S.GD)
20% radial width of cut, follow arrows for value.
% = radial width of cut (Ae) ÷ cutter diameter (D1)
Using a round or ball nose insert, consider the axial depth of cut; see separate chart on the cutter page.

Recommended Starting Feeds [mm]

Light Machining	General Purpose	Heavy Machining

Insert Geometry	Programmed Feed per Tooth (fz) as a % of Radial Depth of Cut (ae)															Insert Geometry
	10%			20%			30%			40%			50–100%			
.F..LDJ	0,12	**0,24**	0,47	0,09	**0,18**	0,35	0,08	**0,15**	0,31	0,07	**0,14**	0,29	0,07	**0,14**	0,28	.F..LDJ
.E..LD	0,12	**0,35**	0,71	0,09	**0,27**	0,53	0,08	**0,23**	0,46	0,07	**0,22**	0,43	0,07	**0,21**	0,42	.E..LD
.S..GD	0,24	**0,54**	0,94	0,18	**0,41**	0,70	0,16	**0,35**	0,61	0,15	**0,33**	0,57	0,14	**0,32**	0,56	.S..GD
.S..HD	0,24	**0,60**	0,97	0,18	**0,45**	0,72	0,16	**0,39**	0,63	0,15	**0,37**	0,59	0,14	**0,36**	0,57	.S..HD

NOTE: Use "Light Machining" values as starting feed rate.

7

7

Always consider starting with the "Light Machining" value. Once established, increase the feed per tooth from the chart.
These are minimum values and can be increased when the application has been proven.
Light Machining — Low Feed Rate, Higher Speed
General Purpose — Normal Feed, Normal Speed
Heavy Machining — Higher Feed, Reduced Speed

Step 8 • Recommended Starting Speeds [m/min]

8

8

How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

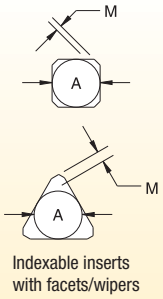
H — Insert Shape

A	Parallelogram	85°
C E	Rhomboid	80° 75°
H	Hexagon	120°
L	Rectangular	90°
O	Octagon	135°
R	Round	—
S	Square	90°
T	Triangular	60°
X	Kennametal Standard Form	

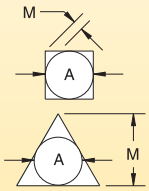
N — Insert Clearance Angle

A	3°
B	5°
C	7°
D	15°
E	20°
F	25°
G	30°
N	0°
P	11°

G — Tolerance Class



Indexable inserts with facets/wipers



Indexable inserts with corner radii

Insert thickness

J — Geometry and Clamping Type

06 — Size

A	"L" for shapes C	T	R	O	C	H	E

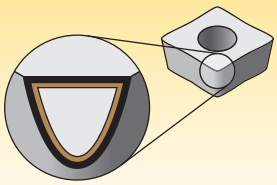
KC720M	A TiAlN-TiN-PVD-coated carbide grade engineered to provide balanced wear and deformation resistance in combination with excellent breakage resistance.	P, M								
KC725M	A high-performance TiAlN-PVD-coated carbide grade for milling steel, stainless steel and ductile cast iron. The good thermal shock resistance of the substrate makes this grade ideal for both wet and dry machining. KC725M is primarily for use in general and heavy machining.	P, M, S								
KC730M	A TiN-PVD-coated carbide grade with a tough substrate and is recommended for general milling with moderate speeds. KC730M can be used wet or dry.	P, M								
KC735M	A TiN-PVD-coated carbide grade offering an unusual combination of high toughness and wear resistance. Even under extreme toughness requirements, KC735M achieves outstanding results in general and heavy machining applications and is suitable for dry and wet machining.	P, M								
KCK15	A multilayered TiN-MT-TiCN-Al_2O_3-CVD-coated carbide grade with advanced Beyond™ post-coat treatment. KCK15 is a wear-resistant grade with balanced toughness for general milling of cast irons at higher speeds. Best results in dry but can also be used wet.	K								
KTPK20	A multilayered TiAlN-AlCrN-PVD-coated cermet. This tough cermet is primarily for use in light and general machining of steel, stainless steel, and cast iron and performs best dry.	P, M, K								
KCPK30	A multilayered TiN-TiCN-Al_2O_3-CVD-coated carbide grade with advanced Beyond™ post-coat treatment and a very tough substrate. KCPK30 has a wide application area in general and rough milling of steels and cast irons. It performs best dry but can also be used wet.	P, K								
KCMP30	A multilayered TiN-TiCN-Al_2O_3-CVD-coated carbide grade with advanced Beyond™ post-coat treatment and a very tough substrate. KCMP30 has a wide application area in general and rough milling of steels. It performs best dry but can also be used wet.	P, M, S								



Coatings provide high-speed capability and are engineered for finishing to heavy roughing.

wear resistance ⟷ toughness

Grade

Coating	Grade Description	05	10	15	20	25	30	35	40	45
KYSP30	Combines excellent wear properties, fracture toughness, and thermal shock resistance for general purpose to finish machining of high-temperature alloys. KYSP30 provides superior depth-of-cut notch resistance compared to whisker ceramics.									
KYS30	KYS30 is the latest in the line of α/βSiAlON grades for general purpose to finish machining of high-temperature alloys. This grade provides excellent wear characteristics, with better toughness and thermal shock resistance than whisker ceramics. KYS30 also gives improved thermal stability.									
KB1340	A PCBN cutting material with micrograin structure for light to general machining of grey cast iron and hard materials. The grade has good wear resistance and is ideal for finishing.									
KD1410	A PCD-tip brazed to carbide for machining aluminium with a very high silicon content, abrasive non-ferrous materials, and fibre-reinforced plastics. KD1410 can be used at very high cutting speeds, even where good surface finishes are required. This grade can be used both wet or dry but is suggested to use coolant where good surface finishes are required.									
KD1415	PCD-tip brazed to carbide for general machining of aluminium with a low silicon content, non-ferrous heavy metals, and plastics. KD1415 can be used at high cutting speeds and for continuous cutting, even where outstanding surface finishes are required. KD1415 is suitable for wet and dry machining.									
KD1420	A varied-grain, PCD-brazed tip grade suited for machining low silicon aluminium, non-ferrous heavy metals, and plastics. It can be used for high cutting speeds where outstanding surface finishes are required and is suitable for dry and wet machining.

Dodeka™ Series • Leader in Advanced Face Milling Applications

Primary Application

Dodeka, Dodeka Mini, and Dodeka MAX™ are the most comprehensive face milling boosters on the market today. Twelve true cutting edges per insert mean low cost per edge and high productivity. With Beyond™ premium milling grades, you will see up to 30% higher Metal Removal Rates (MRR), 25% lower cutting forces due to real soft cutting action, and up to 35% better tool life in light to heavy machining.

Features and Benefits

Dodeka Mini Series • Most comprehensive face milling booster in the market, up to Ap1 max = 4,4mm

All different cutter body variations can be loaded with one insert style.

Dodeka Mini High-Feed

12 True Cutting Edges — 15° lead

Insert HNGJ0604
HNPJ0604

Ap1 max = 1,6mm

Dodeka Mini HF can be loaded with all Dodeka Mini standard inserts, except wiper inserts.

Dodeka Mini 45°

12 True Cutting Edges — 45° lead

Insert HNGJ0604
HNPJ0604

Ap1 max = 3,2mm

Best-in-class leader in face milling up to Ap1 max = 3,2mm. Excellent choice for near net shape strategies and driven tools.

Dodeka Mini 60°

12 True Cutting Edges — 60° lead

Insert HNGJ0604
HNPJ0604

Ap1 max = 4,4mm

Achieve a higher axial depth-of-cut capability up to Ap1 = 4,4mm with standard Dodeka Mini inserts.

Dodeka™ Mini Series

insert size HN.J06
Ap1 max = 4,4mm
page O4–O15

Dodeka™

insert size HN.J0905
Ap1 max = 4,5mm
page O16–O24

Dodeka MAX™

insert size HN.J1307
Ap1 max = 8mm
page O26–O29

NOTE: Use “Light Machining” values as starting feed rate.

- Twelve cutting edges per insert.
- Maximum number of teeth per diameter.
- Productivity booster in all materials.

NOTE: Use “Light Machining” values as starting feed rate.

- Twelve cutting edges per insert.
- Higher Ap1 max with standard inserts.
- Productivity booster in all materials.

NOTE: Use “Light Machining” values as starting feed rate.

- Twelve cutting edges per insert.
- 2mm depth-of-cut capability.
- High feed rates for rough face milling.

KM4X™

The Next Generation Spindle Interface for Heavy-Duty Machining!

KM4X is designed to take on your most aggressive machining jobs. This next generation KM spindle interface should be your first choice for heavy-duty machining applications. It's especially suited for large structural components, like titanium aerospace components.

We engineered these rotating and static tool adaptors to handle 3x more bending capacity than similar competitive models.

What does this mean for you?

- Enables full use of machine and cutting tools for the highest productivity.
- Higher metal removal rates.
- Can retrofit to existing machines to boost throughput without buying new equipment.
- Ideal for aerospace and transportation industry machining jobs.

Experience the advantages at your Authorised Kennametal Distributor or at **www.kennametal.com**.

www.kennametal.com

KENNAMETAL®

- Twelve cutting edges per insert.
- 25% lower cutting forces.
- Laser-hardened pocket seats.

MEGA 45° • Superior Heavy-Duty Milling

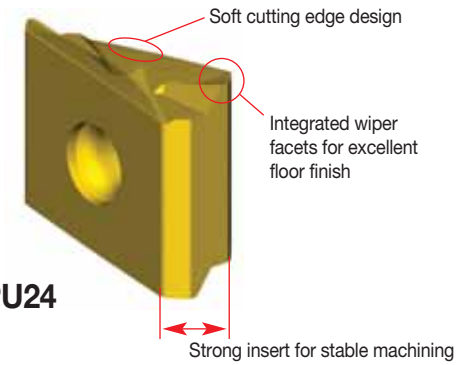
Primary Application

With four true cutting edges per heavy-duty MEGA 45° insert, you know you are getting the low cost per edge and high productivity you need and have come to expect from Kennametal. The soft cutting edge design enables 30% lower cutting forces, and the carbide shim provides protection to the cutter body. Choose MEGA 45° inserts for all of your steel and cast iron indexable milling needs.

Features and Benefits

Features	Benefits
Four true cutting edges per heavy-duty MEGA 45° insert.	Low cost per edge and high productivity.
Soft cutting edge design.	30% lower cutting forces.
Up to 30% increased Metal Removal Rates (MRR).	Performance leader in steel and cast iron materials.
Carbide pocket shims.	Excellent cutter body protection.

4 True Cutting Edges



LNPU24

- Four cutting edges per insert.
- Ap1 max = 17mm.
- Up to 30% higher metal removal rate (MRR).
- Cutter body protection with carbide shims.

NOTE: Use “Light Machining” values as starting feed rate.

MEGA 15, 60, and 90

Primary Application

The real performance booster in heavy-duty milling. With four true cutting edges per heavy-duty insert, you know you are getting the low cost per edge and high productivity you need and have come to expect from Kennametal. The soft cutting edge design enables 30% lower cutting forces, and the carbide shim provides protection to the cutter body. Choose MEGA 15, MEGA 60, and MEGA 90 for all of your steel and cast iron indexable milling needs.

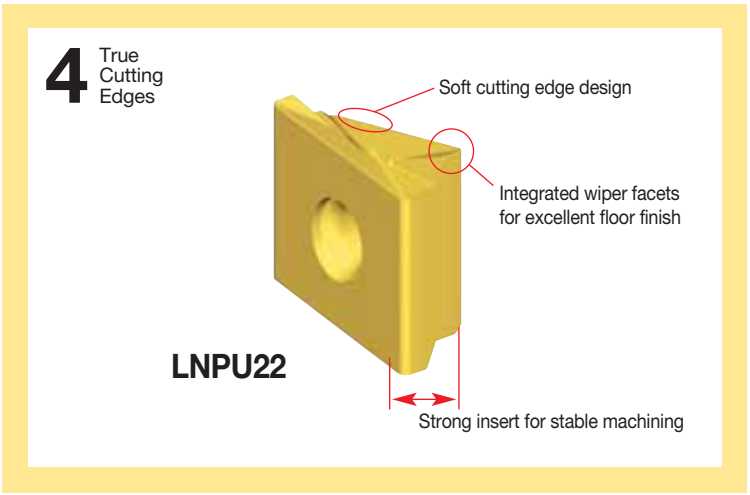
Features and Benefits

Features

- Four true cutting edges per heavy-duty insert.
- One insert style for MEGA 15, MEGA 60, and MEGA 90.
- Soft cutting edge design.
- Up to 30% increased Metal Removal Rates (MRR).
- Carbide pocket shims.

Benefits

- Low cost per edge and high productivity.
- Maximum flexibility to address application needs.
- 30% lower cutting forces.
- Performance leader in steel and cast iron materials.
- Excellent cutter body protection.

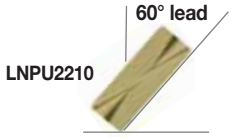


One Insert Style for MEGA 15, MEGA 60, and MEGA 90

MEGA 15

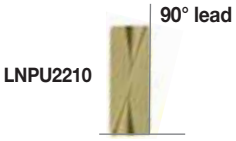
Ap1 max = 6mm

MEGA 60



Ap1 max = 21mm

MEGA 90



Ap1 max = 25mm

- Four cutting edges per insert.
- Ap1 max = 6mm.
- High-Feed capability.
- Cutter body protection with carbide shims.

NOTE: FIRST choice starting speeds are in **bold** type.
As the average chip thickness increases, the speed should be decreased.

Recommended Starting Feeds [mm]

Light Machining	General Purpose	Heavy Machining

Insert Geometry	Programmed Feed per Tooth (fz) as a % of Radial Depth of Cut (ae)															Insert Geometry
	10%			20%			30%			40%			50–100%			
.S..HD	0,20	**0,49**	0,79	0,15	**0,37**	0,59	0,13	**0,32**	0,51	0,12	**0,30**	0,48	0,12	**0,29**	0,47	.S..HD

NOTE: Use “Light Machining” values as starting feed rate.

- Four cutting edges per insert.
- Ap1 max = 25mm.
- Up to 30% higher metal removal rate (MRR).
- Cutter body protection with carbide shims.

Beyond BLAST™ • KSSM™ 45

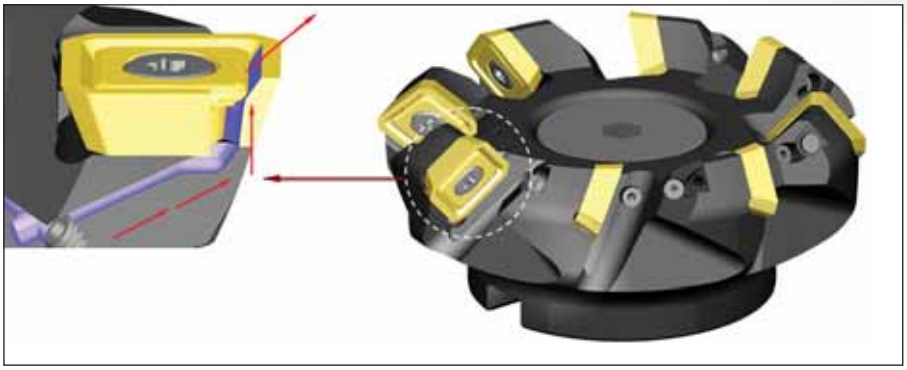
More than just the right tool — the ultimate solution.

Primary Application

The Beyond BLAST KSSM 45° utilises Precision Coolant Technology (PCT) to aggressively apply coolant directly to the cutting area. Not only does this reduce heat at the cutting edge, but it also assists with reducing tool and chip friction, increasing chip evacuation, and relieving shear stress. Because the Beyond BLAST technology can be applied in low-pressure conditions, there is no need to invest in additional equipment. It's so easy to convert from conventional to Beyond BLAST technology, it can be done directly on the floor — virtually eliminating costly downtime. See what the performance leader can do for your titanium machining.

Features and Benefits

Features	Benefits
PCT — Precision Coolant Technology.	Coolant delivery exactly to the cutting area.
Increased heat transfer.	Less tool/chip friction and shear stress.
Improved chip control.	True internal coolant assists chip evacuation.
Beyond BLAST also works with regular low-pressure conditions.	No need for investments in high-pressure equipment.
Easy to convert from conventional to Beyond BLAST Technology.	Shop-floor-proven handling reduces costly downtime.
Up to 100% better tool life.	Performance leader in machining titanium.



- Precision Coolant Technology (PCT).
- Coolant delivery exactly to cutting area.
- Increased heat transfer.
- Improved chip control.
- Productivity booster for machining titanium.

KSSM™ 45°

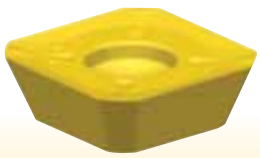
Primary Application

Universal face mill for conventional machining.

Features and Benefits

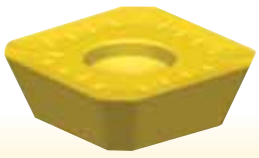
- Insert SE.T1404.
- Ap1 max = 6,6mm.
- Four true cutting edges.
- Pocket seat protection with carbide shims.
- Easy handling and rapid insert change.

-LD2



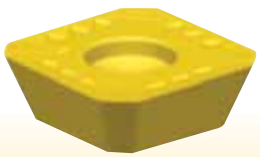
For light machining and semi-finishing, light edge prep.

-GP2



For medium roughing, medium edge prep.

-GB2



For heavy roughing, strongest edge protection.

- Consumes less power.
- Rapid insert changes.

NOTE: Use “Light Machining” values as starting feed rate.

More than just the right tool • the ultimate solution.

That's **Beyond BLAST.**™

That's **Different Thinking.**

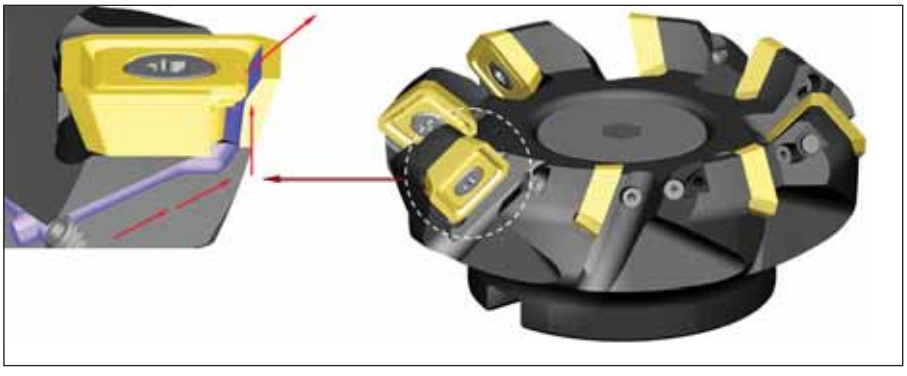
At Kennametal, innovation follows vision. Our revolutionary products and services are inspired by asking "what if?" The solutions that follow — like our Beyond BLAST through-coolant inserts — deliver remarkable results in the world's most demanding machining environments.

A cutting-edge insert that delivers coolant precisely at the cutting edge. Now that's Different Thinking. That's Kennametal.

To learn more about your productivity gains using Beyond BLAST technology, visit www.kennametal.com.

Milling

- Beyond BLAST technology uses low-pressure conditions to offer many of the high-pressure performance benefits.
- Delivers superior performance on titanium, using either high- or low-pressure coolant systems.
- Effective thermal management results in reduced cutting temperatures, improved lubricity, superior chip control, and longer tool life.
- Beyond BLAST for milling increases tool life by up to 100% compared with conventional coolant delivery systems.



beyond™ BLAST™

KSOM™ Mini • KSOM™

Primary Application

Super soft cutting due to super positive rake face.

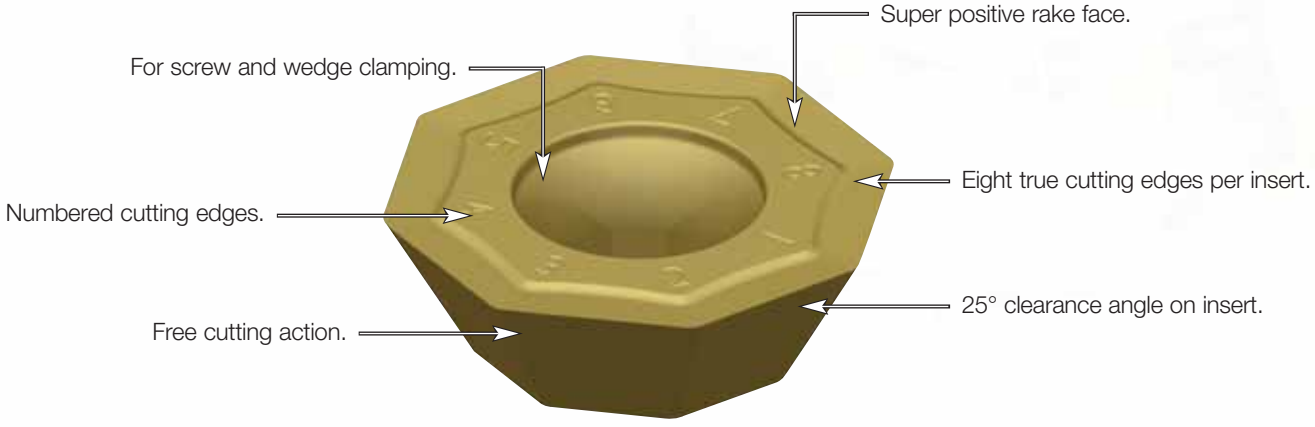
Features and Benefits

Features

- KSOM Mini: insert OFKT06/OFPT06.
- KSOM: insert OFKT07/OFPT07.
- KSOM Mini: Ap1 max = 3,5mm (8 indexes); Ap2 max = 9mm (4 indexes).
- KSOM: Ap1 max = 5mm (8 indexes); Ap2 max = 12mm (4 indexes).

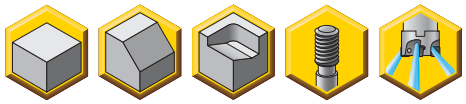
Benefits

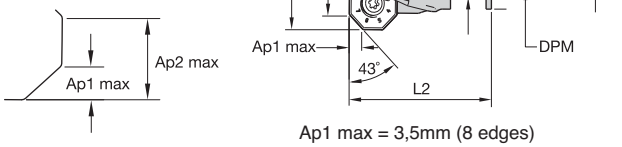
- Low cutting forces deliver higher feed capability.
- Excellent performance in stainless steel and super alloys.
- First choice solution in machining turbochargers.



Insert OF.T06/OF.T07

- Eight cutting edges per insert.
- Super soft cutting.





Ap1 max = 3,5mm (8 edges)
Ap2 max = 9mm (4 edges), reduce feed rate by 40%

Fix-Perfect™ Cast Iron Rougher and Finisher

Primary Application

Performance booster in machining cast iron materials. Based on workpiece requirements, Fix-Perfect covers all face- and shoulder-milling applications when machining cast iron materials with best-in-class productivity. Eight true cutting edges per insert deliver low cost per edge and best CPP ceramic inserts available as standard line items.

Features and Benefits

Fix-Perfect Cast Iron 70° and 90° Roughing and Finishing in One Tool

- Innovative tangential insert clamping.
- First choice for high feed rates.
- Protection of non-cutting edges.
- Adjustable element for fine finishing with wiper inserts.
- PCBN-tipped wiper inserts available for excellent floor finish.
- Micro-precise runout setup.

Fix-Perfect Cast Iron Finisher Best-in-Class Fine-Finishing Concept

- Rigid and stable cutter design.
- High-precision pocket seat.
- Perfect axial runout without insert adjustment.
- Reliable, excellent floor finish and flatness.
- Easy handling and low-cost cutter setup.

NOTE: Please order spare parts separately.
For diameters of 125mm and 160mm, use the coolant screw and coolant cap spare parts together.
Torque wrench (KTW45) and 3mm hex bit (69709922164) may be purchased separately to ensure proper torque setting.

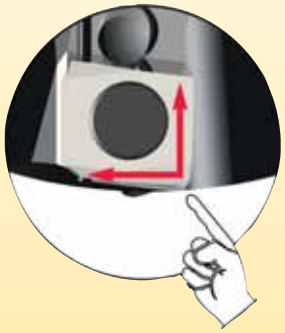
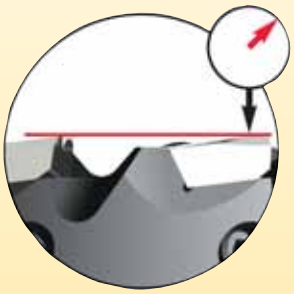
NOTE: Use “Light Machining” values as starting feed rate.

Insert Loading Procedure

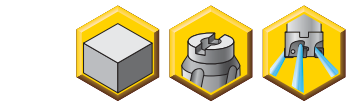
1. Clean insert and insert pocket seat.
2. Load insert — push insert against pin and axial pocket wall.
3. Tighten screw to a torque of 5 Nm.
4. Check the axial runout.
5. Do not exceed the maximum recommended RPM.

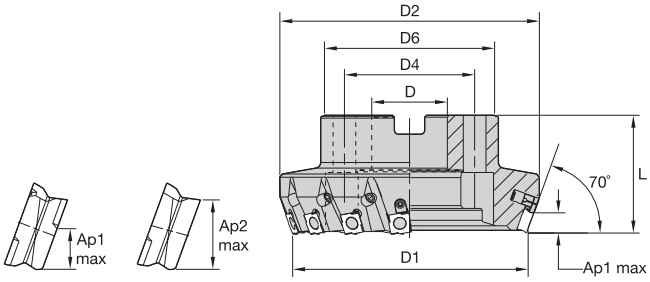




tool diameter (mm)	maximum axial runout	maximum RPM
63	10 µm	20000
80	10 µm	15900
100	10 µm	12750
125	10 µm	10200
160	15 µm	7950
200	15 µm	6350
250	15 µm	5100

- Eight cutting edges per insert.
- Rough and finish in one operation.
- Tangential mounted inserts deliver higher feed rates.
- Adjustable pockets (D1 = 80–160mm).





Ap1 max = 5,9mm (8 edges)
Ap2 max = 9,5mm (4 edges), reduce feed rate by 30%

NOTE: Please order spare parts separately.
For diameters of 125mm and 160mm, use the coolant screw and coolant cap spare parts together.
Torque wrench (KTW45) and 3mm hex bit (69709922164) may be purchased separately to ensure proper torque setting.

NOTE: FIRST choice starting speeds are in **bold** type.
As the average chip thickness increases, the speed should be decreased.
KY3500™ can be used for machining of low tensile ductile irons (e.g., 65-45-12).

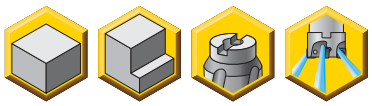
Recommended Starting Feeds [mm]

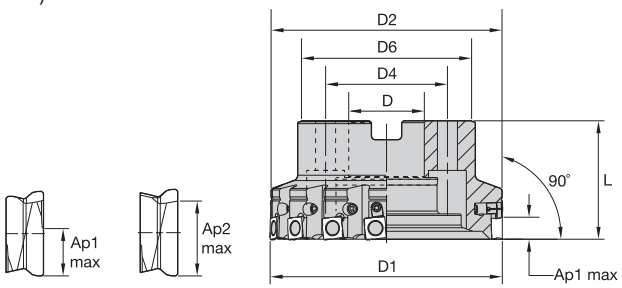
Light Machining	General Purpose	Heavy Machining

Insert Geometry	Programmed Feed per Tooth (fz) as a % of Radial Depth of Cut (ae)															Insert Geometry
	10%			20%			30%			40%			50–100%			
.E..GP	0,13	**0,25**	0,46	0,10	**0,19**	0,35	0,09	**0,16**	0,30	0,08	**0,15**	0,28	0,08	**0,15**	0,28	.E..GP
.T..GP	0,19	**0,43**	0,84	0,14	**0,32**	0,62	0,13	**0,28**	0,54	0,12	**0,26**	0,51	0,11	**0,26**	0,50	.T..GP
.S..GP	0,17	**0,40**	0,78	0,12	**0,30**	0,58	0,11	**0,26**	0,51	0,10	**0,24**	0,48	0,10	**0,24**	0,47	.S..GP

NOTE: Use “Light Machining” values as starting feed rate.

- Eight cutting edges per insert.
- Rough and finish in one operation.
- Tangential mounted inserts enable higher feed rates.
- Adjustable pockets (D1 = 80–200mm).





Ap1 max = 6mm (8 edges)
Ap2 max = 10mm (4 edges), reduce feed rate by 30%

NOTE: Please order spare parts separately.
For 125mm and 160mm diameter milling cutters, always use the coolant screw and coolant cap together.
Adjusting element 479.100 includes adjusting element screw 193.300.
Torque wrench (KTW45) and 3mm hex bit (69709922164) may be purchased separately to ensure proper torque setting.

NOTE: FIRST choice starting speeds are in **bold** type.
As the average chip thickness increases, the speed should be decreased.
KY3500™ is only recommended for machining of low tensile ductile iron (e.g., 65-45-12).

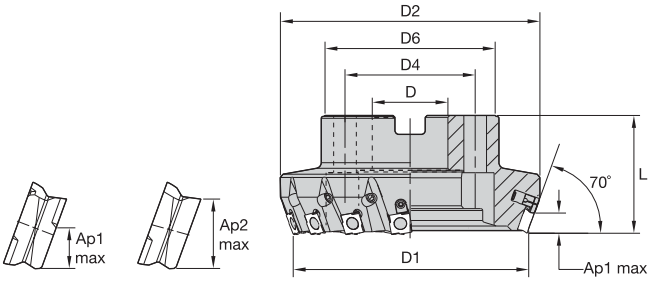
Recommended Starting Feeds [mm]

Light Machining	General Purpose	Heavy Machining

Insert Geometry	Programmed Feed per Tooth (fz) as a % of Radial Depth of Cut (ae)															Insert Geometry
	10%			20%			30%			40%			50–100%			
.E..GPB	0,08	**0,20**	0,40	0,06	**0,15**	0,30	0,06	**0,13**	0,26	0,05	**0,12**	0,24	0,05	**0,12**	0,24	.E..GPB
.T..GPB	0,17	**0,36**	0,75	0,13	**0,27**	0,56	0,11	**0,24**	0,48	0,10	**0,22**	0,45	0,10	**0,22**	0,44	.T..GPB
.S..GPB	0,17	**0,33**	0,67	0,13	**0,25**	0,50	0,11	**0,21**	0,44	0,10	**0,20**	0,41	0,10	**0,20**	0,40	.S..GPB

NOTE: Use “Light Machining” values as starting feed rate.

- Eight cutting edges per insert.
- Rough and finish in one operation.
- Tangential mounted inserts deliver higher feed rates.
- Adjustable pockets.



Ap1 max = 6,5mm (8 edges)
Ap2 max = 9,5mm (4 edges), reduce feed rate by 30%

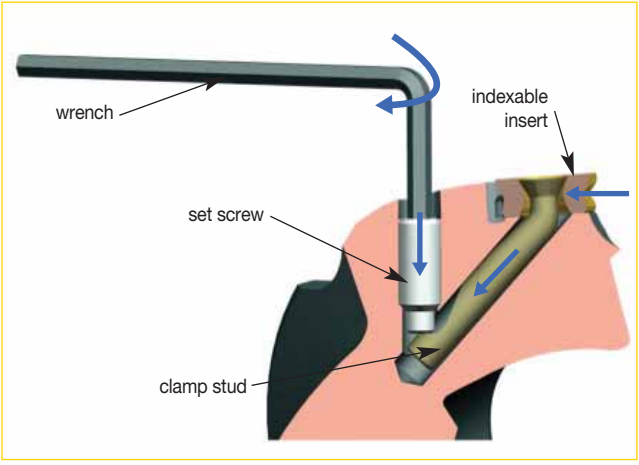
Fix-Perfect Cast Iron 70°/90°

Innovative tangential insert clamping.

- First choice for high feed rates.
- Rigid and stable pocket seat.
- Protection of non cutting edges.
- Medium- and fine-pitch cutter design.



Experience the advantages at your Authorised Kennametal Distributor or at **www.kennametal.com**.

NOTE: FIRST choice starting speeds are in **bold** type.
As the average chip thickness increases, the speed should be decreased.
KY3500™ is only recommended for machining of low tensile ductile iron (e.g., 65-45-12).

Recommended Starting Feeds [mm]

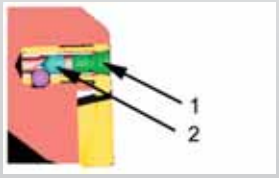
Introduction to Fitting Cutting Bodies

procedures:	roughing		roughing/finishing	
	fixed pocket	adjustable pocket	fixed pocket	adjustable pocket
1 Reset adjusting element T x T9	–		–	
2 Insert roughing insert Tighten SW 3 M_{An} = 5 Nm				–
3 Tighten adjusting element gently	–		–	–
4 Insert finishing insert and pre-tighten SW 3 M_{VG} = 1 Nm	–	–	–	
5 The finishing insert is positioned 0,04mm in front of the highest roughing insert	–	–	–	 0,04mm (.0016")
6 Tighten the finishing insert M_{An} = 5 Nm	–	–	–	



NOTE: This process must be repeated whenever an indexable insert is changed. The ball is loose.

Changing the adjusting element

1. Remove the taper screw (1).
2. Loosen the SW 1,5 screw (2).
3. Remove the adjusting element.

ATTENTION: The maximum permissible cutting speed of the milling cutter heads is vc max = 1000 m/min. Only use original parts when clamping the indexable inserts.

HexaCut™ Series

Primary Application

The Kennametal HexaCut face milling program is specifically engineered for rough and semi-finish face milling of cast, ductile, and compacted graphite iron. Twelve cutting edges drastically reduce your cost per edge and increase tool life. Shorter setup times and excellent cutter accuracy allow you to apply the HexaCut program to the most demanding jobs. One ceramic and eight carbide grades with six insert geometries deliver high feed rates and will enable you to reach optimum horsepower.

Features and Benefits

Tailor-Made Platform for Machining Automotive Components in Cast Iron Materials

- First choice for machining GCI and CGI materials.
- 45° lead cutter bodies engineered with fixed pockets for roughing applications up to Ap1 max = 6mm.
- 60° lead cutter bodies engineered with fixed and adjustable pockets for roughing and combined roughing/finishing applications up to Ap1 max = 8mm.
- Fine-pitch cutter density for best productivity in machining cast iron materials.
- Comprehensive standard offering of different insert geometries to match every application for light, medium, and heavy machining.
- Easy handling and cutter body setup.
- Twelve true cutting edges per insert for low cost per edge and excellent CPP.
- Split case design with adaptor flange available as preferred engineered solution standard for D1 = 250mm and D1 = 315mm.

Adjustment Instructions

Before Being Used for the First Time

- The milling cutter must be carefully cleaned of anti-corrosive materials, dust, etc.
- The milling cutter should only be washed when all components have been dismantled.
- Only the double-threaded screws of the clamping or adjusting wedge should be lubricated with copper grease; all other components must have clean metallic surfaces.
- A torque wrench is recommended to tighten the double-threaded screws.
- When fitting indexable inserts on the milling cutter, ensure that they are inserted in the correct position in a clean insert seat and that they are held in position during clamping.

For 45° Roughing Mills without Anvils

- The double-threaded screws on the clamping wedges for the indexable inserts are first pre-tightened to approximately 2 Nm and then tightened to a final torque of 7 Nm.

ATTENTION

At each tool adjustment, the body, indexable inserts, and spare parts must be checked and replaced, if necessary. Before each tool use, the double-threaded screws of the indexable inserts and the stops must be tightened in the specified order to a torque of 7 Nm. In addition, even if the cartridges have not been adjusted, the double-threaded screws of the adjusting wedges must be checked to see if these have been tightened to a torque of 3 Nm. If not, they must be re-tightened to this torque.

NOTE: The tools must only be used in accordance with their function. We accept no liability for their improper use. Changes of any kind and/or printing errors are not valid grounds for claims.

- Monoblock cutter design.
- Twelve cutting edges per insert.
- High feed rates.
- CGI milling solution.
- Excellent floor surface finish.

NOTE: Cartridges need to be ordered separately. Number of adjustable pockets (Z ADJ) is related to cutting diameter.

Roughing/Finishing Corrected (reduced axial cutting force)

a) For a cutting depth of <8mm and an achievable surface finish of Ra 3.2.

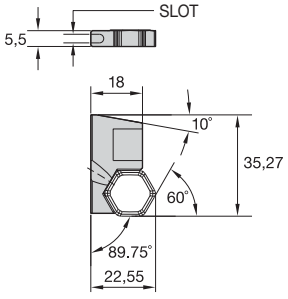
Roughing insert: HNGX090516-MR, HNGX090508-MH, HNGX090520-MM, or HNGX090520-ML in the fixed insert seats.

Finishing insert: HNGF090504-MT in the finishing cartridge.

b) For a cutting depth of <1mm and an achievable surface finish of Ra 1.6.

Roughing insert: HNGX090504-MM, HNGX090520-MM, HNGX090520-ML, in the fixed insert seats.

Finishing insert: HNGF090504-MF in the finishing cartridge.



order number	catalogue number
2033468	12748503400

NOTE: Cartridges need to be ordered separately. Number of adjustable pockets (Z ADJ) is related to cutting diameter.

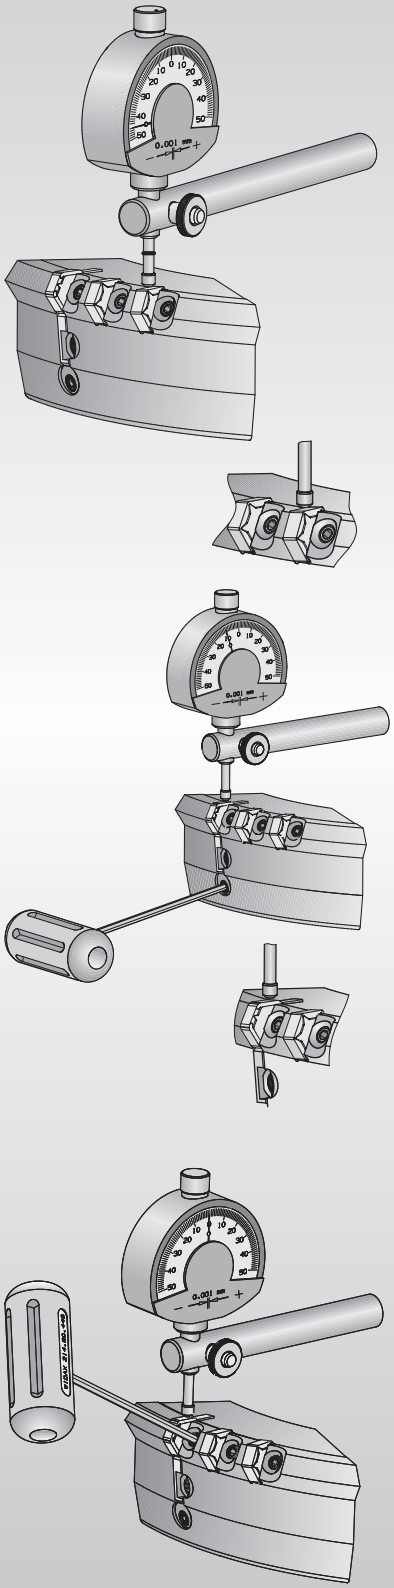
NOTE: Use “Light Machining” values as starting feed rate.

Insert setting procedure

This procedure is to be used on all 60° lead roughing/finishing mills using the unmarked roughing cartridge, the finishing cartridge (marked ●) and the corrected edge cartridge (marked ▬). These steps must be followed when adjusting the cutters for finishing inserts.

1. Clean all insert pockets.
2. Mount all wedges and cartridges. Torque the cartridge lock wedge screw to 3 Nm.
3. Mount all inserts, making sure they are seated properly in the pocket, and torque the insert lock wedge screws to 3 Nm.
4. Torque the wedge screws for all fixed pocket inserts to 7 Nm.
5. Loosen the cartridge insert wedge screw and the cartridge lock wedge screw.
6. Pressing the insert into the cartridge pocket, adjust the cartridge to 0,20–0,30mm below the fixed pocket inserts.
7. Torque the insert lock wedge screw and the cartridge lock wedge screw to 3 Nm.
8. Adjust the axial position to 0,03–0,04mm above the fixed pocket inserts.
9. Loosen the cartridge insert lock wedge screws and then re-torque to 3 Nm.
10. Adjust the axial position to the final dimension, 0,04–0,05mm above the highest fixed pocket insert.
11. Torque the insert lock wedge screws and the cartridge lock wedge screws to 7 Nm.
12. Conduct a final check of the axial runout and position.



The NEW KSSR™ 84°

Primary Application

Kennametal's new line of KSSR 84° inserts are versatile, easy-to-use, and right- or left-hand neutral, making them ideal for automotive machining operations or any other industry that relies on transfer line manufacturing. Available in carbide and ceramic grades for applications in cast and ductile irons and alloy steels, choose KSSR 84° inserts for all your fine and coarse pitch styles.

Features and Benefits

KSSR 84° Features

- Available in metric, JIS, and inch products, diameters from 63–250mm.
- Fine and coarse pitch styles.
- Easy-to-use and to adjust with shorter setup time.
- New wiper inserts in carbide and ceramic will provide excellent surface quality.

Improved Versatility

- Proven solution on the automotive segment.
- Right- and left-hand cutters, ideal for transfer lines.
- Premium grades in carbide and ceramic for applications in cast and ductile irons and alloy steels.
- Inserts are neutral and can be used for right- or left-hand cutting.

Unrivaled Benefits

- Capability: 5mm maximum depth of cut.
- Excellent accuracy:

  Radial = +/- 0,025mm
  Axial = adjustable +/- 0,002mm
- Inserts have eight true cutting edges.

- Eight cutting edges per insert.
- Fast and easy insert indexing.
- Highest feed rates.
- CGI specialist.

NOTE: Use “Light Machining” values as starting feed rate.

KSSR™ 84°
Adjustable Pockets

- Clamping and adjustment wedge with double thread screw.
- Eight true cutting edges.
- Wiper insert ahead of roughing insert on cast iron materials.
- Wiper insert can also be loaded into cutters with only fixed pockets.

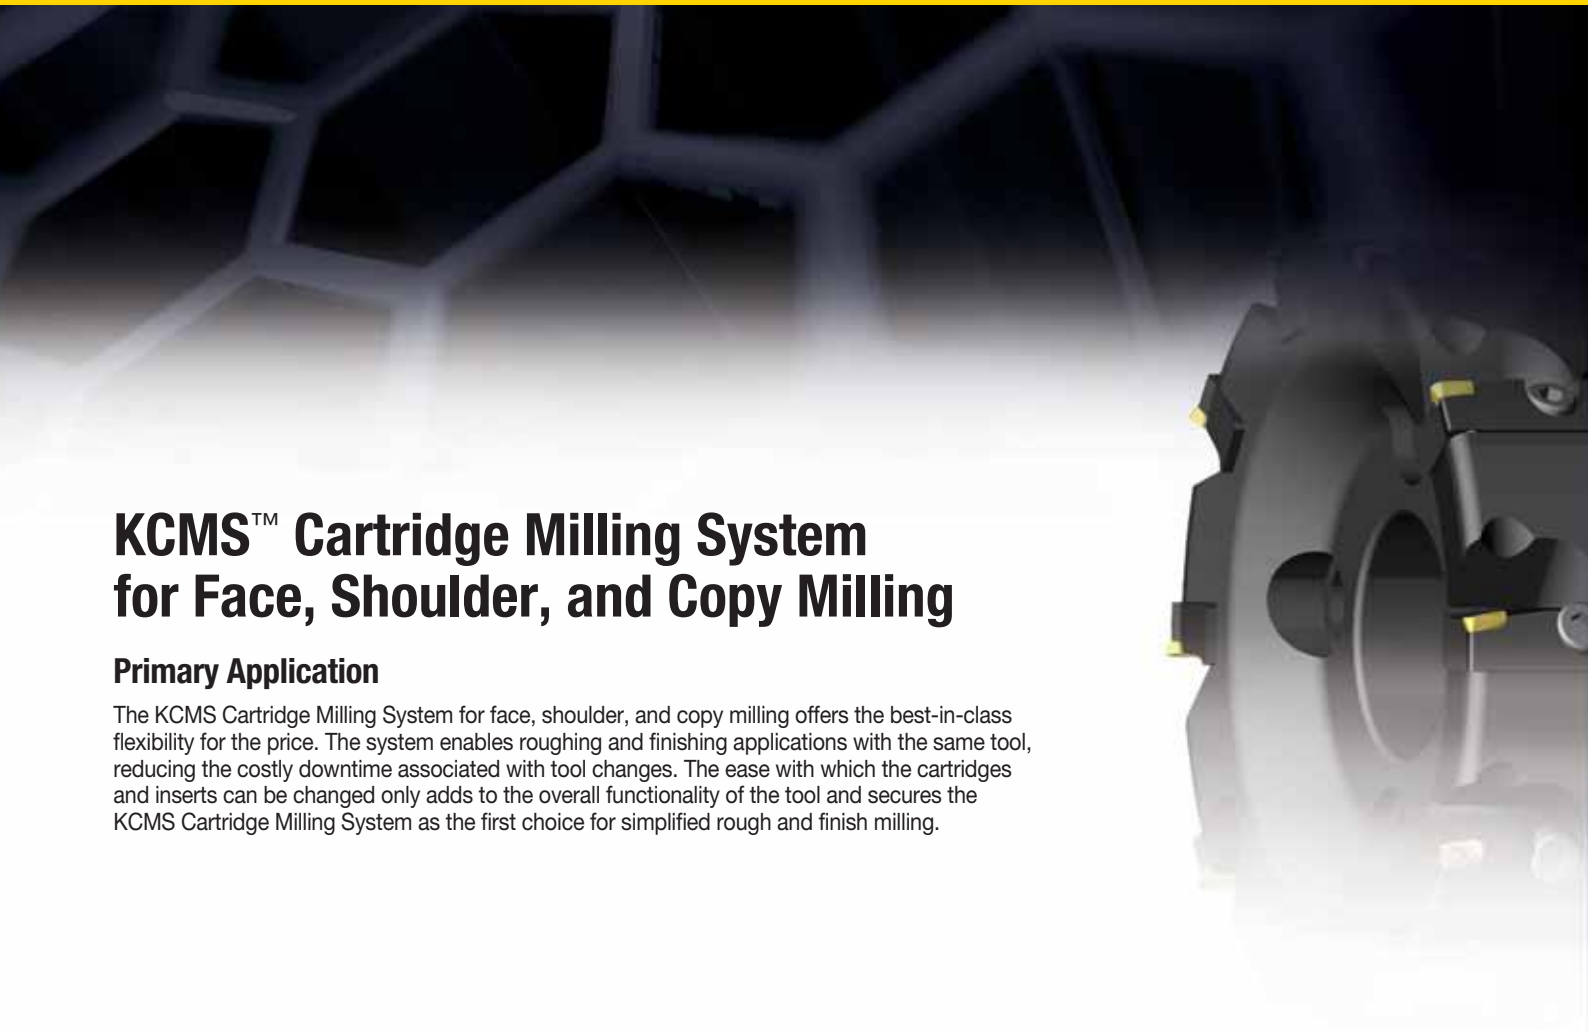
KENNAMETAL®



KCMS™ Cartridge Milling System for Face, Shoulder, and Copy Milling

Primary Application

The KCMS Cartridge Milling System for face, shoulder, and copy milling offers the best-in-class flexibility for the price. The system enables roughing and finishing applications with the same tool, reducing the costly downtime associated with tool changes. The ease with which the cartridges and inserts can be changed only adds to the overall functionality of the tool and secures the KCMS Cartridge Milling System as the first choice for simplified rough and finish milling.

Features and Benefits

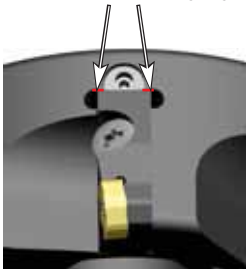
Features	Benefits
Roughing and finishing solution with the same tool.	Adjustable pockets in combination with quick cartridge stop feature.
Easy change of cartridges with different insert styles and lead angles.	Best-in-class flexibility for less money.
Quick cartridge stop feature.	Ready to go in a minute with excellent runout and no adjustment for roughing.
Easy runout adjustment.	For finishing operations to obtain a perfect floor finish.

KCMS™ Key Features — Roughing and Finishing with the Same Tool

• Axial adjustment wedge.

Standard Offering
D1 = 125–315mm

• Quick cartridge stop.
• Ready to go in a minute with no adjustment for roughing.



- Roughing and finishing with one single tool.
- Quick cartridge stop feature.
- Easy runout adjustment.
- Easy change of cartridges with different insert styles and lead angles.

NOTE: Please order KCMS cutter bodies and cartridges separately.
KCMS-RN1204CA: Cartridge for Rodeka™, IC12 with 12 cutting edge indexes.
KCMS-WO0905CA: Cartridge for KenFeed 2X, High-Feed platform with 6 effective cutting edges per insert.

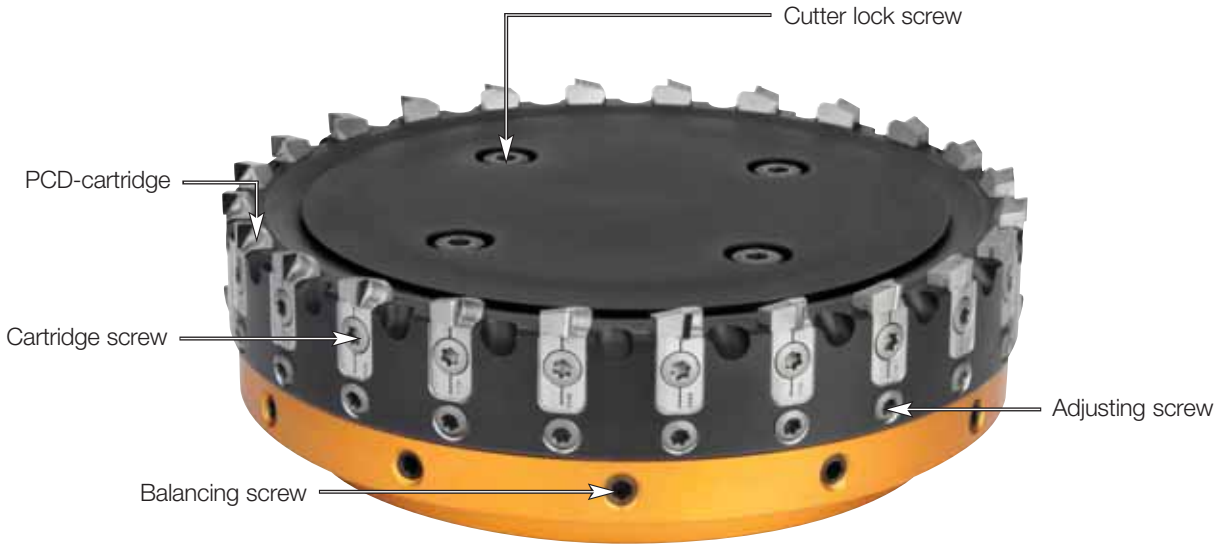
KSCM™ AluMill™

Primary Application

The KSCM AluMill face milling program is specifically engineered to deliver best-in-class performance in high-volume aluminium machining operations. Runs at higher speeds with no chatter while still easy to adjust. The new PCD KD1420™ grade provides long tool life, and with the Kennametal Blue Box™ program for reconditioning worn cartridges, you can reduce your inventory costs as well!

Features and Benefits

- Anti-vibration cutter design.
- Best rigidity for high feed rates.
- Unique dovetail wedge clamping design.
- No radial movement of cartridges.
- Centrifugal force protection cartridge design.
- Integrated chip gash into cartridge.
- Quick setup and easy adjust concept.
- Flexible cartridge configuration.
- No burr cartridges for fine finishing.
- Blue Box service.



- Productivity booster in aluminium face milling.
- Rough and finish in one operation.
- Precision balanceable cutter bodies produce mirror-finish surfaces.

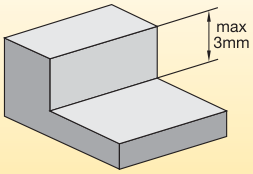
NOTE: Use “Light Machining” values as starting feed rate.

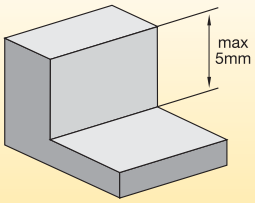
Tool Configuration • Universal Cartridge

Face milling cutter fitted entirely with universal cartridges



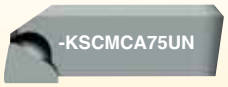
Depth of Cut:
max 3mm

Surface Quality:
Rz2 - Rz4



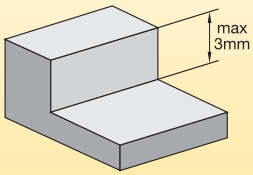
Contouring:
PCD cutting edge length = 5mm

Tool Configuration • Universal Cartridge



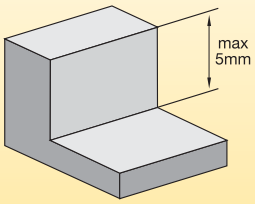
+ Finishing Cartridge

Fitting the face milling cutter with universal and finishing cartridges in a ratio of approximately 3:1



Depth of Cut:
max 3mm

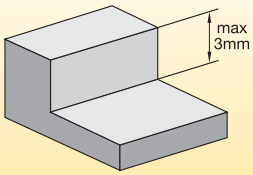
Surface Quality:
Rz1,5 - Rz2,5



Contouring:
PCD cutting edge length = 5mm

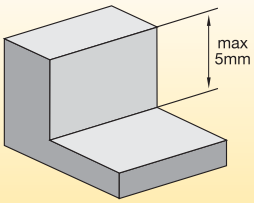
Tool Configuration • Edge Cartridge

Fitting the face milling cutter entirely with edge cartridges



Depth of Cut:
max 3mm

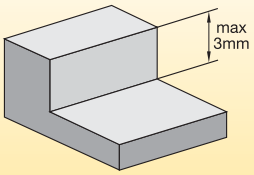
Surface Quality:
Rz2 - Rz4



Contouring:
PCD cutting edge length = 5mm

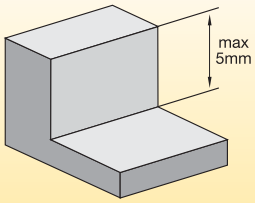
Tool Configuration • Cartridge for Defined Surfaces

Fitting the face milling cutter entirely with cartridges for defined surfaces



Depth of Cut:
max 3mm

Surface Quality:
Rz3,2 - Rz17



Contouring:
PCD cutting edge length = 5mm

Tool Configuration • Universal Cartridge, 75° Face Milling

1. Insert cartridges into the body.
2. Screw in the clamping screws (RH), and tighten to 10 Nm.
3. Screw in the adjusting screws (RH), and tighten to 3 Nm.

4. Determine which cartridge is in the highest axial position.
5. By turning the adjusting screws to the right, adjust the remaining cartridges for even running. Max permitted runout error 3 µm.

Tool Configuration • Universal Cartridge + Finishing Cartridge (Ratio Approx. 3:1), 75°

1. Insert universal cartridges at ratio of approximately 4:1 in the body. Make sure they are evenly distributed!
2. Screw in the clamping screws (RH), and tighten to 10 Nm.
3. Screw in the adjusting screws (RH), and tighten to 3 Nm.

4. Determine which cartridge is in the highest axial position.
5. By turning the adjusting screws to the right, adjust the remaining cartridges for even running. Max permitted runout error 3 µm.

6. Insert finishing cartridges as described in Steps 1–5 but with an axial advance of 0,008 +0,002mm. Max permitted runout error of 3 µm with finishing cartridges.

Tool Configuration • Edge Cartridges, 90° Shoulder Milling

1. Insert cartridges into the body.
2. Screw in the clamping screws (RH), and tighten to 10 Nm.
3. Screw in the adjusting screws (RH), and tighten to 3 Nm.

4. Determine which cartridge is in the highest axial position.
5. By turning the adjusting screws to the right, adjust the remaining cartridges for even running. Max permitted runout error 3 µm.

Tool Configuration • Cartridge for Defined Surface, 75°

1. Insert cartridges into the body.
2. Screw in the clamping screws (RH), and tighten to 10 Nm.
3. Screw in the adjusting screws (RH), and tighten to 3 Nm.

4. Determine which cartridge is in the highest axial position.
5. By turning the adjusting screws to the right, adjust the remaining cartridges for even running. Max permitted runout error 3 µm.

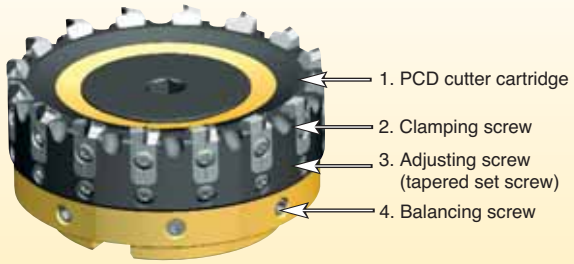
NOTE:

The process must be repeated when the cartridges are changed. To dismantle, remove the adjusting element (Part 3), clamping screw (Part 2), and cartridge (Part 1).

Instruction for Mounting the Face Milling Cutter on the Appropriate Toolholder

User Information:

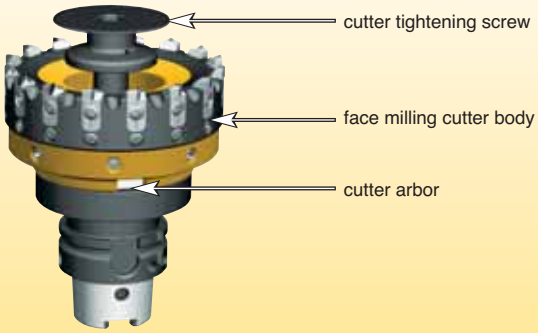
- Tools conform to EN ISO 15641.
- Absolute cleanliness must be observed when assembling the face milling cutter.
- An optimum cutting result will only be achieved by adjusting and balancing the complete tool system (face milling cutter + toolholder).
- Balancing is achieved with the aid of the balancing screws. Quality class G2.5 DIN-ISO 1940.
- The balancing screw must not protrude above the body.
- The balancing and adjustment screws have an adhesive coating according to DIN 267, Part 28. If, after repeated use, the coating is no longer adequate to secure the screws, the screws must be replaced.
- The maximum permitted operating speed (quoted on the tool) must not be exceeded.
- The maximum permitted operating speed is only permitted with clamping systems manufactured by Kennametal in accordance with DIN 69982 Form B with enlarged plane bearing surface. Reduce the operating speed if clamping systems with increased projection length or made by other manufacturers are used.
- Tools and fittings are to be serviced and repaired by Kennametal.
- Screws sealed with lacquer have been adjusted by the manufacturer, and must not be moved.



Instructions for Fitting the Cutter Cartridge • Tool Construction

When mounting the face milling cutter (dimensions similar to DIN 8030 Form B), place the body of the face milling cutter on the arbor. Ensure that the contact faces are clean. Screw in the cutter fastening bolt (RH) and tighten with the appropriate torque.

Tightening torque for the central cutter tightening screw:
M20 (adaptor diameter 40): **250 Nm**
M16 (adaptor diameter 32): **150 Nm**
M12 (adaptor diameter 27): **80 Nm**

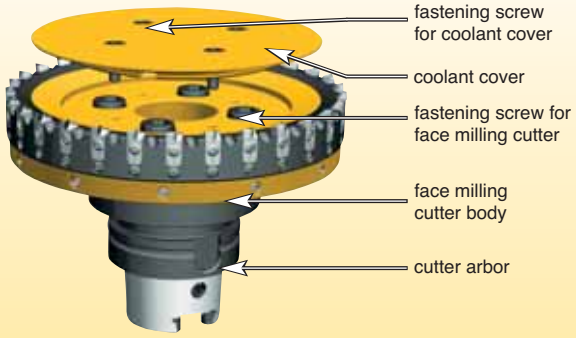


Mounting the Face Milling Cutter (Dimensions Similar to DIN 8030 Form C)

Place the body of the face milling cutter on the arbor. Ensure that the contact faces are clean. Screw in the fastening bolt (RH) and tighten with the appropriate torque. Put the aluminium coolant cover in place and fasten with the Torx fastening screws.

Tightening torque for the face milling cutter fastening screws:
M20: 250 Nm
M16: 110 Nm
M12: 50 Nm

Tightening torque for the coolant cover fastening screws:
M8: 18 Nm



KSCM AluMill
Reconditioning Service

New Supply

On request, the face mill will be delivered with cartridges already mounted and adjusted.

Service Level • PCD Insert Reconditioning

Reconditioning of PCD cartridges up to three times.

- **Tool diameter and length remain constant.**

Face mill will be delivered with exchanged cartridges already mounted, adjusted, and balanced.

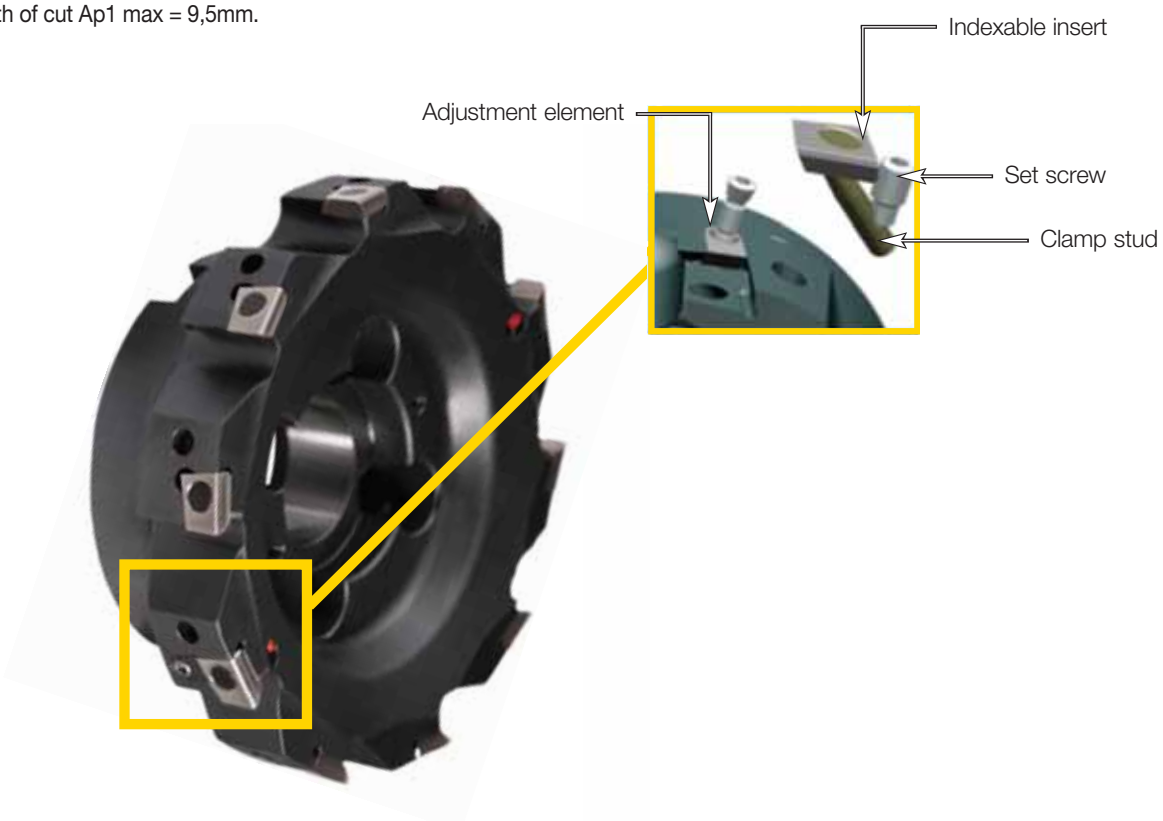
Fix-Perfect™ 90° Aluminium

Primary Application

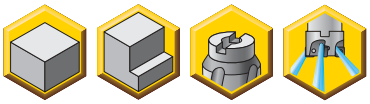
The Fix-Perfect 90° is excellent in machining aluminium and non-ferrous materials.
24° positive rake provides free cutting action while producing superior finishes and flatness.

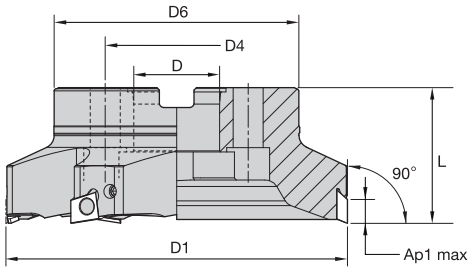
Features and Benefits

- True 90° shoulder achievable.
- Roughing and finishing in one tool.
- Full safety first insert clamping.
- Easy adjustable pocket seats for fine finishing (PM, HPM, HSM Line).
- Achievable floor surface quality: Ra = 0.5.
- Real soft cutting action.
- Axial depth of cut Ap1 max = 9,5mm.



- Excellent for milling aluminium and non-ferrous materials.
- Good choice for thin wall or poorly fixtured workpieces.
- 24° positive rake provides free cutting action.
- Produces excellent finish and flatness.
- Maximum speed is 2000 m/min.
- All pockets are fixed pockets.





Fix-Perfect • Shell Mills • M Line • Fixed Pockets

NOTE: Please order spare parts separately.
For all diameters: adjusting element screw **193.337**.
If the adjusting element needs to be replaced, please return the cutter to the Kennametal Service Center.
For 125mm and 160mm diameter milling cutters, be sure to always use the coolant lock screw and coolant cap together.
Torque wrench (KTW45) and 3mm hex bit (69709922164) may be purchased separately to ensure proper torque setting.

- All pockets are adjustable.
- High-speed machining.

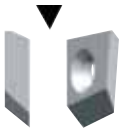
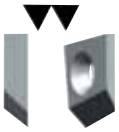
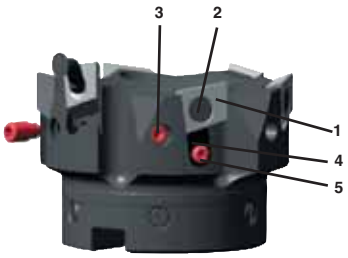
Introduction to Fitting Cutting Bodies

Roughing indexable inserts
BGHX15L5PC..GG.



Finishing indexable inserts
BGHX15L5PC..GG.1W





Clean dust, grease, etc., from the insert seat, insert (1), and clamp stud (2).

	PM	HPM/HSM	PM/HPM/HSM
1	Loosen the adjusting element (4). Loosen the adjusting screw (5).	Loosen the adjusting element (4). Loosen the adjusting screw (5).	Loosen the adjusting element (4). Loosen the adjusting screw (5).
2	Insert the indexable inserts and tighten with the clamping screw (3) 5 Nm. ATTENTION: Ensure that the insert is correctly positioned in the insert seat.	Insert the indexable inserts and pre-tighten with the clamping screw (3) 1,5 Nm. ATTENTION: Ensure that the insert is correctly positioned in the insert seat. Determine which cutting body is the highest on the axis.	Insert the indexable inserts and pre-tighten with the clamping screw (3) 1,5 Nm. ATTENTION: Ensure that the insert is correctly positioned in the insert seat. Determine which cutting body is the highest on the axis.
3	Tension the adjusting element (4) by tightening the adjusting screw (5) to the specified torque of 0,5 Nm. 	Extract by 0,02mm the insert that is axially the highest by turning the adjusting screw (5). Adjust the remaining inserts to the desired runout with maximum travel of the inserts 0,2mm.	Adjust the finishing indexable insert(s) to the desired projection, preferably 0,04mm by turning the adjusting screw (5). ATTENTION: Ensure that the insert is correctly positioned in the insert seat.
4	 **Adjustment element to be replaced by Kennametal Service Center only.**	Clamp the insert by tightening the clamping screw (3) to the specified torque of 5 Nm. 	Clamp the insert by tightening the clamping screw (3) to the specified torque of 5 Nm.

Chamfer Mills

Primary Application

Countersinking and external/internal chamfer milling.

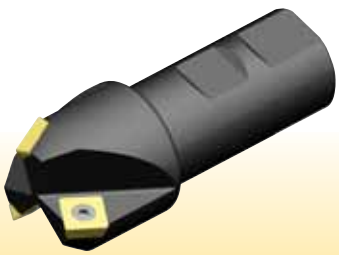
Features and Benefits

- One insert style fits into all pockets to cover 30°, 45°, and 60° chamfering.
- Soft cutting action.
- Chamfer milling front and back.

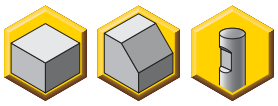
30° lead angle

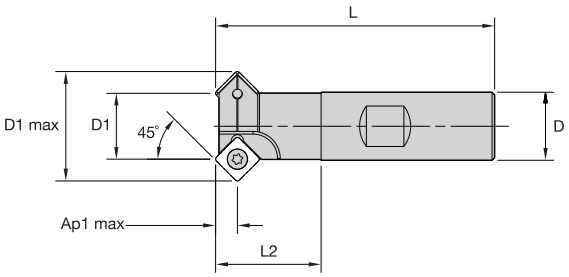
45° lead angle

60° lead angle



• Countersinking and chamfering front and back.





Chamfer End Mills • 45° • Weldon® Shank • SD09

Mill 1-10™ • High-Performance Shoulder Milling Platform

Primary Application

The multifunctional Mill 1-10 platform works with all tool materials in shoulder, ramp, slot, plunge, and helical milling with one insert style to improve productivity and reduce inventory and machining costs. The super positive cutting rake, soft cutting action, and low cutting forces enable higher feed rates and spindle protection. Innovative insert and cutter body designs offer improved ramping capabilities.

Features and Benefits

Versatility

- Works with all tool materials.
- Capable of shoulder, ramp, plunge, and helical milling.
- Internal coolant and air supply.

Advantages

- Optimised soft cutting edge.
- Elliptical edge generates 90° wall.
- Increased ramping capability due to state of the art insert and cutter body design.
- Innovative chip gash design for excellent chip evacuation and perfect cutter body stability.
- All pockets are machined into heat-treated materials, guaranteeing best-in-class runout and pocket strength.
- Inserts feature innovative margin along the main cutting edge, corner nose radius, and wiper facet for perfect edge stability.

*To learn more, **scan here**.*

For instructions on how to scan, please see page xxix.

- Aggressive ramping rates.
- Generates superior surface finish.
- Mill 90° walls.
- High RPM capabilities.

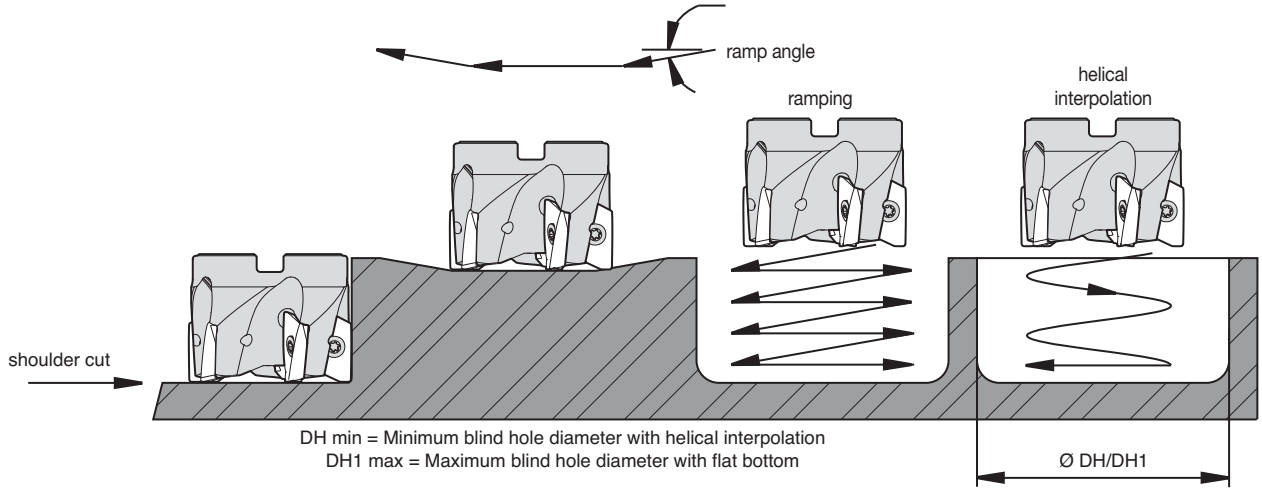
NOTE: Use “Light Machining” values as starting feed rate.

Application Examples



insert style	cutting diameter	max ramp angle to non-cutting corner tangent	max ramp angle to steel body interference	min hole diameter (DH min)	min flat-bottom hole diameter (DH1 min)	max diameter (no flat bottom)
Mill-1, 10mm	12	not recommended	not recommended	not recommended	not recommended	not recommended
Mill-1, 10mm	16	9,7°	12,3°	19,50	28,73	32
Mill-1, 10mm	18	7,6°	9,6°	23,29	32,68	63
Mill-1, 10mm	20	6,2°	8,6°	27,25	36,63	40
Mill-1, 10mm	22	5,2°	7,0°	31,25	40,63	44
Mill-1, 10mm	25	4,2°	5,3°	37,26	46,62	50
Mill-1, 10mm	28	3,5°	4,3°	43,26	52,62	56
Mill-1, 10mm	32	2,8°	3,3°	51,27	60,62	64
Mill-1, 10mm	40	2,0°	2,3°	67,30	76,61	80
Mill-1, 10mm	42	1,9°	2,1°	71,32	80,60	82
Mill-1, 10mm	50	1,5°	1,6°	87,53	96,86	100
Mill-1, 10mm	63	1,2°	1,2°	113,54	122,86	126
Mill-1, 10mm	80	0,9°	0,9°	147,54	156,85	160
Mill-1, 10mm	100	0,7°	0,7°	187,54	196,85	200

NOTE: Max ramp angle decreases as nose radius increases.

- Aggressive ramping rates.
- Generates superior surface finish.
- Mill 90° walls.

LOIS™ — Mill 1-14™

Load Optimised Insert Spacing with an Unmatched Soft Cutting Action

Boost productivity in all your complex contour milling and full slotting operations!

- Reduced cutting forces.
- Balanced cut.
- Reduced power fluctuation.
- Coolant through tool for machining exotic materials.
- Versatile cutting strategies:
  - Slot
  - Profile
  - Plunge
  - Ramp

www.kennametal.com

KENNAMETAL®

Mill 1-14™

Primary Application

Mill 1-14 is a versatile, functional cutter system for a range of cutting tasks. Mill 1-14 cutters can be used for profiling, slotting, ramping, helical interpolation, circular interpolation, and other milling applications. It's a single tool with multi-functional benefits. The Mill 1-14 inserts also are specially designed to add cutting versatility. Innovative micro-geometry features contribute greatly to enhanced performance, various rake angles, negative T-land, and small hone. Results include significantly reduced cycle times and lower cutting forces. Test results in producing 90° walls have proven excellent as well; try GD2 geometry.

Features and Benefits

Features

- Insert geometries and grades for most workpiece materials.
- Insert radii from 0,15mm (.016") up to 4mm (.157").
- Axial depth of cut up to 14mm (.551").
- Beyond™ grade technology.

Benefits

- Easy cutting action, kind on entry and also exiting the workpiece.
- Polished geometry for aluminium machining.
- Slotting, profiling, ramping, helical interpolation, and plunging.

- Aggressive ramping rates.
- Generates superior surface finish.
- Mill 90° walls.
- High RPM capabilities.

Mill 1-14™ Helical Cutters

Primary Application

The Mill 1-14 helical cutters will increase your axial depth of cut. Designed with axial support pins for added stability, the Mill 1-14 features our essential Load-Optimised Insert Spacing™ (LOIS) technology. LOIS dramatically minimises unwanted vibrations and fluctuations in power requirements, resulting in a much smoother-sounding cut. Up to nine different coolant nozzle diameters enable tailoring to suit each machine tool, providing remarkably consistent, focused coolant flow.

Features and Benefits

Functions

- Improves axial depth of cut better than standard end mills due to the positioning of inserts in helical configuration.
- Up to nine different coolant nozzle diameters tailored to suit each machine tool.
- One tool that offers features common to end mills, but rarely seen on a helical cutter: Helical ramping from solid, slotting, contouring, ramping, and plunging.

Benefits

- Increases depth of cut.
- Consistent, focused coolant flow.
- Built for performance, accuracy, and versatility.

- Aggressive ramping rates.
- Generates superior surface finish.
- Mill 90° walls.
- Axial support pins.
- Unique coolant nozzles.

order number	catalogue number	drive size
1993552	THW2M	2 MM

NOTE: Check the Spare Parts table for the coolant hole size that is incorporated in the cutters.
If you need an alternative, there are eight other variants to choose from to increase or decrease the pressure.
Example: MS2191C12 is a 1,20mm hole. All coolant nozzles are interchangeable with the original that is supplied with the cutter. This gives flexibility with coolant flow.

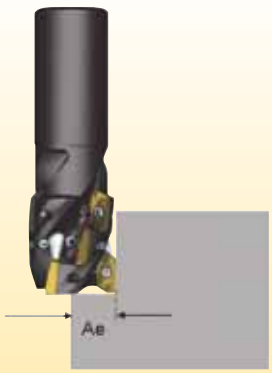
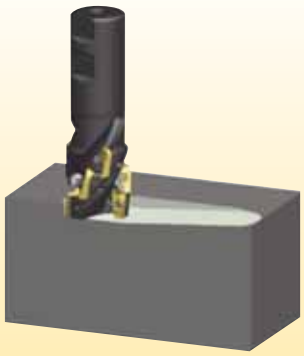
Mill 1-14	50	2.7°	83,96	96,05	100
Mill 1-14	63	1.9°	109,93	121,47	126

Best Machining Practices



Contouring/Profiling
Ae = up to 50% of cutter Ø. This can be used with or without coolant/air blast, depending on materials being machined.

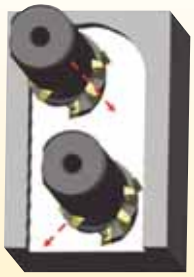
Slotting
Full width cutting or profiling over 50% of the cutter Ø. It is suggested to use coolant or air blast to evacuate chips. If necessary, reduce coolant nozzle hole size, which adds more pressure, and the chip is forced out of the chip gash.



Ramping
Only machine to the depth of the first insert. Observe the ramping angles given in the catalogue.

Slotting by Plunging

Slot with the alternate side method, alternating the cuts from side to side. This will enable the cutter to move away from the material prior to moving back up in the Z-axis. The cutter will not be in contact with the workpiece. Follow the direction of the arrows. Move 3 axes simultaneously into the centre of the slot. Maximum step over 8mm (.315").



With multiple Z-axis passes, when the final depth is achieved, move straight back up in the Z-axis, then repeat at the next step over.

[1] Number of effective flutes.
[2] Mounting style: W = Weldon®; S = Shell mill.
[3] Max ramp angle when radial depth of cut exceeds 8mm (.31").
[4] Max insert corner radius allowed in first row without cutter body modification.
[5] Recommended for profiling applications only.

Profile, Slot, and Ramp

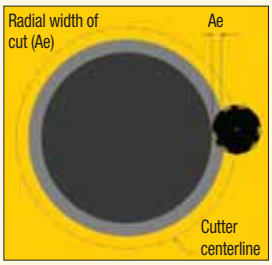
When taking a cut that equals up to 50% of the cutter diameter, you can operate without coolant, unless your material is coolant-dependent. When using more than 50% of the cutter diameter, there is a need to have coolant or an air blast through the nozzles. This will assist with chip evacuation. Please use the feed table when taking a small percentage of the cutter diameter. This will improve the volume of material removed. To achieve a superior surface finish on the base, adjust the feed to suit the finish required.

When using this cutter for plunging, the maximum suggested step over is 3,30mm (.130"). Always try to move the cutter and insert away from the material when retracting in the Z-axis. This can be done when employing the alternate cut method (zig zag method). Use a 3-axis move to get all axes moving at the same time, suggest 0,25mm (.010").

When machining a conventional slot, you have to move straight up in the Z-axis.

Circular and Helical Interpolation

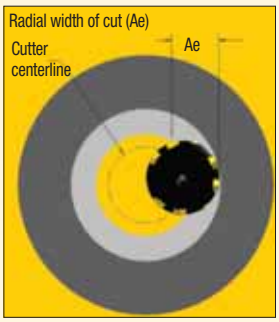
External



When profiling around the external part of a component, it is important to increase the feed rate. This will maintain the chip thickness value.
The programmed feed rate needs to be calculated at the cutter centerline.

For external profiling, adjust the feed rate for feed at the cutter centerline.
Increase the feed rate for external profiling.

Internal



When machining inside a component profile, the area of contact is larger.
The feed rate needs to be slower and at the centerline.

For internal profiling, adjust the feed rate for feed at the cutter centerline.
This will effectively reduce the feed rate as the distance traveled is less than the peripheral distance.

Cutting Data

Reference page P39 for both speed and feed data. Each insert has an average chip thickness value that will enable you to determine the feed per tooth.

Please remember when using less than 50% of the cutter diameter, the feed rate will need to be increased. Failure to do so will result in premature insert failure.

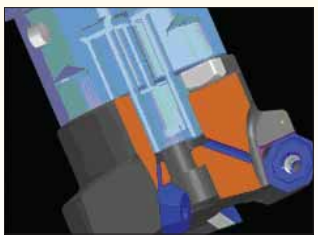
Running too slowly will reduce tool life.

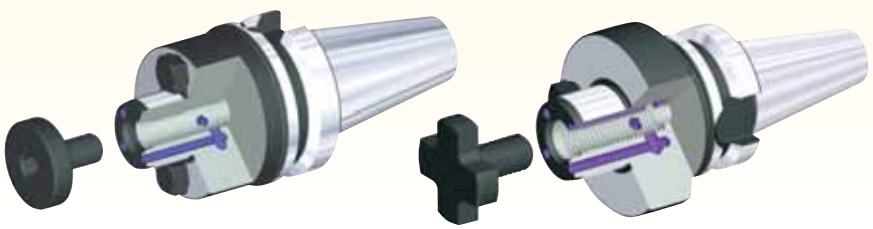
Spare Parts

Please make sure all the spare parts in the cutters are fully tightened prior to using the product.

Shell mill cutters no longer have coolant grooved bolts. We now have adaptors that will enable the coolant to be fed through the adaptor pilot diameter.

True Through Coolant Shell Mill Adaptors





ERICKSON™

Superior Gripping

For bearing milling chucks when grip counts.
ERICKSON — the industry name you can trust.

- Heavy- and fine-milling applications.
- Great accuracy ≤5µm (.0002") at 3 x D and best gripping system.
- Pre-balanced to high specifications.
- Versatile as a collet chuck with the use of reduction sleeves.

Visit **www.kennametal.com** or contact your local Authorised Kennametal Distributor.

www.kennametal.com

KENNAMETAL®

Mill 1-18™

Primary Application

Mill 1-18 is a versatile, functional cutter system for a range of cutting tasks. Mill 1-18 cutters can be used for profiling, slotting, ramping, helical interpolation, plunging, and other milling applications. It's a single tool with multi-functional benefits. The Mill 1-18 inserts also are specially designed to add cutting versatility, especially for larger axial depths of cut. Results include significantly reduced cycle times and lower cutting forces.

Features and Benefits

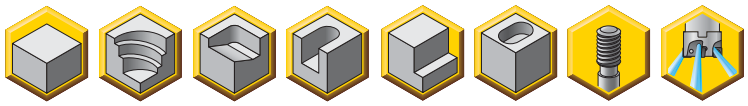
Features

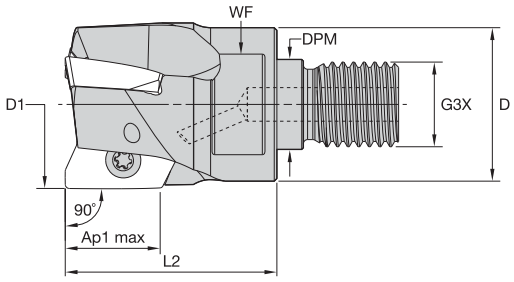
- Inserts for larger axial depth of cut.
- Inserts radii up to 6,35mm (.250").
- Axial depth of cut up to 18mm (.708").
- Cutter diameters up to 160mm (8").
- Beyond™ grade technology.

Benefits

- Slotting, profiling, ramping, helical interpolation, and plunging.
- Angled screw for insert retention.
- Insert geometries and grades for most workpiece materials.

- Aggressive ramping rates.
- Generates superior surface finish.
- Mill 90° walls.
- High RPM capabilities.





End Mills • Screw-On

40	**MS2126**	4,0	**DT15IP**

NOTE: Standard milling cutters will accept insert nose radii up to 2mm without modification.

- Aggressive ramping rates.
- Generates superior surface finish.
- Mill 90° walls.
- High RPM capabilities.

Looking for a product that's not shown in this catalogue?

Check the Kennametal website!

Indexable Milling

Online product catalogue available 24/7

Visit **http://www.kennametal.com/milling/** to browse our electronic catalogue any time you're looking for Kennametal's best tooling solutions. It's fast, free, and always available. The online e-catalogue is updated weekly with products and solutions for milling, turning, holemaking, and tooling systems applications.

KENNAMETAL

- Japanese Industry Standards (JIS) have metric cutter diameters with inch bore sizes.
- Aggressive ramping rates.
- Generates superior surface finish.
- Mill 90° walls.
- High RPM capabilities.

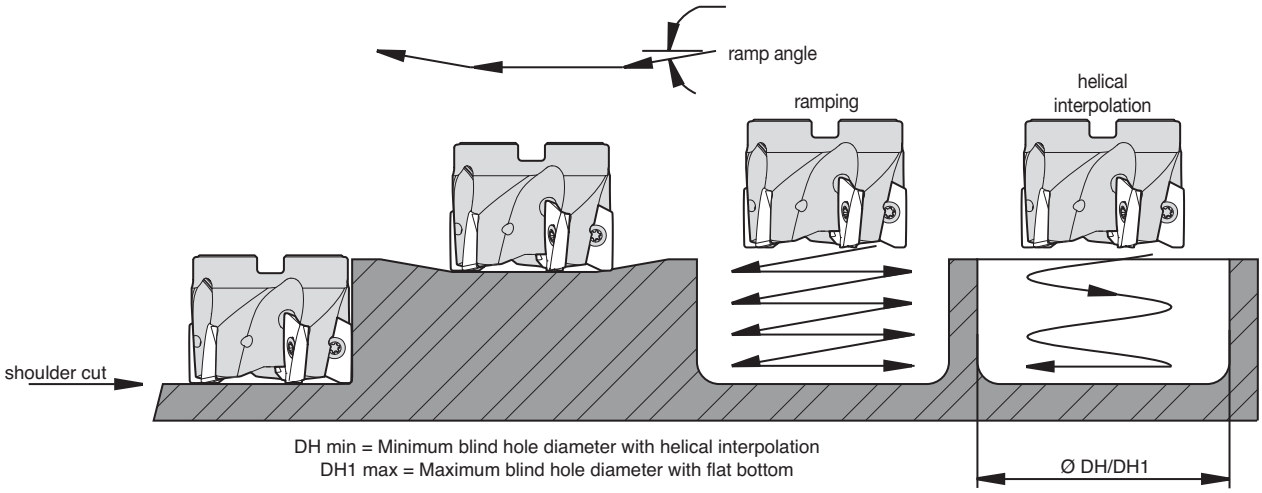
NOTE: Use “Light Machining” values as starting feed rate.

Application Examples



insert style	cutting diameter	max ramp angle	min hole diameter (DH min)	max flat-bottom hole diameter (DH1 max)	max diameter (no flat bottom)
Mill-1, 18mm	25	17°	29,24	45,84	50
Mill-1, 18mm	32	11°	42,98	59,84	64
Mill-1, 18mm	40	8°	58,92	75,84	80
Mill-1, 18mm	50	5°	78,88	95,84	100
Mill-1, 18mm	63	4°	104,86	121,84	126
Mill-1, 18mm	80	3°	139,02	156,5	160
Mill-1, 18mm	100	2°	179,00	196,5	200
Mill-1, 18mm	125	2°	228,98	246,5	250
Mill-1, 18mm	160	1°	298,98	316,5	320

NOTE: Max ramp angle decreases as nose radius increases.

Mill 1-25™

Primary Application

Also known as Mill1 Max, the Mill 1-25 cutter is made specifically for aluminium machining but is also useful when machining cast iron. High-Feed capabilities enable routing applications with an axial depth of cut of up to 25mm (.98").

Features and Benefits

Functions

- Strong, thick inserts over 5,2mm (.200") thick.
- Axial depth of cut up to 25mm (.98").
- Cylindrical, monoblock/HSK63A, and shell mills.

Benefits

- Made for machining aluminium, but also useful for machining cast iron.
- High-Feed capability for routing applications.
- Balanced-by-design — if running over 10,000 RPM, balance the cutter assembly.

- For aluminium machining.
- High-speed capability.
- Insert screws should be changed when inserts are changed.

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.
For more information, please visit **www.kennametal.com/carbiderecycling.**

- For aluminium machining.
- High-speed capability.
- All integral shank tools are balanced to G2.5 at 10.000 RPM.
- Insert screws should be changed when inserts are changed.

More than just the right tool • the ultimate solution for titanium machining

That's **Beyond BLAST.**™

That's **Different Thinking.**

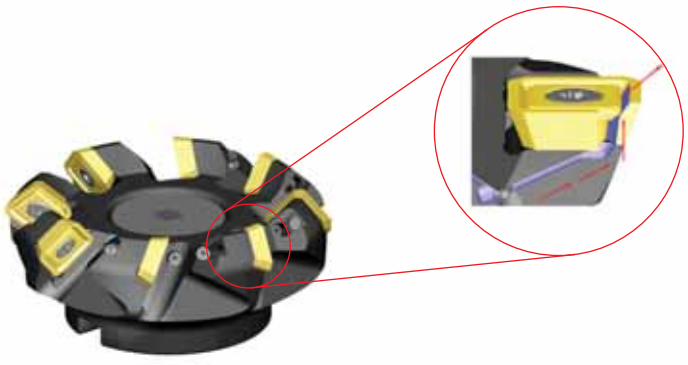
At Kennametal, innovation follows vision. Our revolutionary products and services are inspired by asking "what if?" The solutions that follow — like our Beyond BLAST through-coolant inserts — deliver remarkable results in the world's most demanding machining environments.

A cutting-edge insert that delivers coolant precisely at the cutting edge. Now that's Different Thinking. That's Kennametal.

To learn more about your productivity gains using Beyond BLAST technology, visit www.kennametal.com.

Milling

- Beyond BLAST technology uses low-pressure conditions to offer many of the high-pressure performance benefits.
- Delivers superior performance on titanium, using either high- or low-pressure coolant systems.
- Effective thermal management results in reduced cutting temperatures, improved lubricity, superior chip control, and longer tool life.
- Beyond BLAST for milling increases tool life by up to 100% compared with conventional coolant delivery systems.



beyond™ BLAST™

KSSM™ • Platform

Primary Application

The Kennametal KSSM platform is a versatile solution providing three insert sizes that cover a wide range of applications: face milling, shoulder milling, slotting, profiling, and Z-axis (plunge milling).

Features and Benefits

KSSM IC10

- Four cutting edges.
- Excellent surface finishes.
- Low power requirements.

KSSM IC12

- Four cutting edges.
- Excellent surface finishes.
- Low power requirements.
- Increased depth of cut.

- Four cutting edges per insert.
- Excellent surface finishes.
- Low power requirements.

NOTE: Use “Light Machining” values as starting feed rate.

Beyond BLAST™ · KSSM™ 45°

More than just the right tool — the ultimate solution for titanium machining

Features and Benefits

- PCT — Precision Coolant Technology.
- Coolant delivery exactly to the cutting area.
- Increased heat transfer.
- Less tool/chip friction and shear stress.
- Improved chip control.
- True internal coolant assists chip evacuation.
- Beyond BLAST also works with regular low-pressure conditions.
- No need for investments in high-pressure equipment.
- Easy to convert from conventional to Beyond BLAST technology.
- Shop-floor-proven handling reduces costly downtime.
- Up to 100% better tool life.
- Performance leader in machining titanium.

beyond™ BLAST™

Experience the advantages at your Authorised Kennametal Distributor or at **www.kennametal.com**.

www.kennametal.com

KENNAMETAL®

- Four cutting edges per insert.
- Excellent surface finishes.
- Low power requirements.

KSSM-KSSP Helical

Primary Application

The KSSM-KSSP helical cutters were originally developed and proven for the aerospace industry but are now available for all industries. The proprietary variable rake design minimises vibration and chatter.

Features and Benefits

Features

- Patented HARVI™ technology.
- Progressive helical rakes.
- Unique coolant supply.

Benefits

- Increased tool life in titanium.
- Increased metal removal rates.
- Lower power consumption.
- Ensures chip evacuation, even on exotic materials.

- Four cutting edges per insert.
- Excellent surface finishes.
- Low power requirements.

Screw-On Milling Cutter Adaptors

The Complete Solution to Milling

Features and Benefits

- High metal removal rates.
- High runout accuracy.
- Maximum performance capability.
- Optimising productivity with long reach and short overhang to support all types of applications.
- Cutter is kept on centre for precision and maximum performance compared to Weldon® shank system.
- Ability to extend with standard offering extensions and reducers.
- Ground face contact for rigidity and accuracy.

NOTE: Consult the Kennametal Tooling Systems catalogue for information on holders.

KENNAMETAL®

KFSR™ Heavy-Duty Cutter

Primary Application

The KFSR heavy-duty cutter is specifically engineered for heavy-duty milling of steel and cast iron — with unparalleled chip control and large axial depth of cut. Engineered for applications requiring higher cutting speeds and feed rates with low cutting forces, it is ideally suited for the automotive, heavy automotive, rail, shipbuilding, construction vehicles, and general engineering industries.

Features and Benefits

Features

- Enables heavy machining with low cutting forces and less vibration.
- Uses less horsepower with increased metal removal rates.
- Inserts with three and four serrations generate small chips for easy evacuation.
- Cutter design alternates the two insert styles to provide better overall chip control.
- Inserts stacked in helical rows.
- Replaceable shim provides pocket protection for leading insert. (NOTE: 63mm cutters do not contain a shim).

Notching

- Cutter design alternates two insert styles (G3 and G4) to provide better overall chip control.
- Insert serrations reduce cutting forces.
- Special chipbreaker generates small, controllable chips for easy evacuation.

- Lower cutting forces with serrated inserts.
- Small chips for ease of evacuation.
- Improved metal removal rates.
- IMPORTANT: Load the inserts in the correct position; see additional details below.

Insert pocket detail:

- 63mm cutters do not contain a shim (see Spare Parts table).
- If insert pocket is marked with number “3”, use insert AP ER-G3.
- If insert pocket is marked with number “4”, use insert AP ER-G4.
- It is important to use the correct insert in position 3 or 4. Failure to do so will result in damage to the cutter body.
- Only use inserts with nose radii greater than 0,8mm in the first row.

KTMS™ Slotting Cutter

Primary Application

KTMS slotting cutters produce “T” slots in machine beds as well as small radial depths of cut for machining shallow radial slots. There is always a need to prepare the slot before using this type of cutter — preparation is the key to success. See the technical information for information about the pre-machining on Q6.

Features and Benefits

- Only available in metric dimensions.
- Slot widths from 9–22mm.
- Three different insert sizes.
- Preparing the component before slotting is the key to success.
- Prepare workpiece with a slot.
- Honed insert edges.
- Feed rates between 0,10–0,15mm; lower feed rates will induce vibration.
- Use air flow to evacuate chips.
- Always start the cutting process with a new cutting edge.

- Prepare workpiece with a slot.
- Honed insert edges.

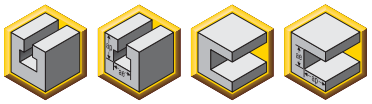

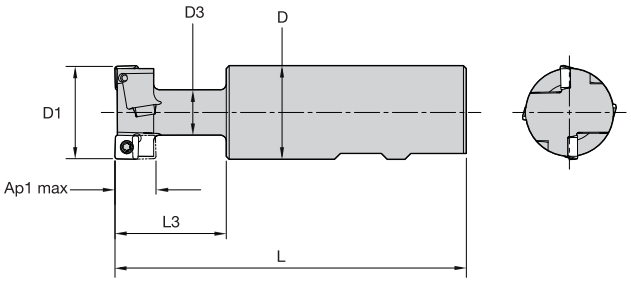

Fig. 1

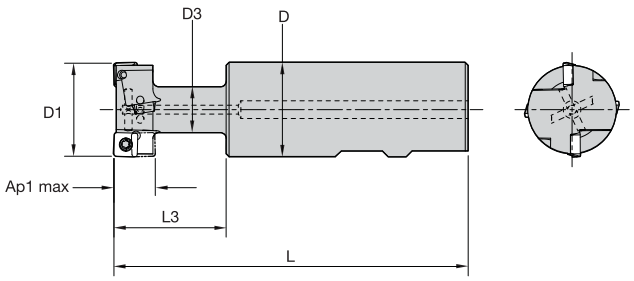

Fig. 2

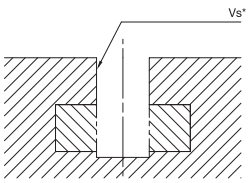

Fig. 3

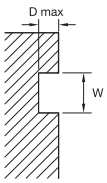

Side Slotting

Steel

- Machining a vertical slot, depth to be kept at a minimum as shown in Figure 1
- If the depth is greater than Figure 1, chip evacuation problems could occur.
- Vibrations could occur when the T-slot cutter diameter increases; use Figure 1 as the starting point.
- If chattering is a concern, adopt the Figure 2 solution.

Cast Iron

- Fewer problems with chip evacuation and reduced cutting forces enable deeper vertical slots as shown in Figures 2 and 3.
- Air blast is recommended to disperse the chips; this can be used for steel and cast iron.

KSRM™

Multipurpose Milling Cutters

Specially developed for machining titanium and stainless steel. KSRM platform enables you to pocket, profile, ramp, and plunge with up to 1mm (.039") fz with consistent performance, providing outstanding metal removal rates with the lowest cutting forces in roughing applications.

- Anti-rotation feature with eight indexes.
- High positive topography with strong cutting edges.
- High clearance on the cutters and inserts.
- Wide cutter offering with internal coolant.
- Ground and PSTS inserts.
- Provides more stability and reliability.
- Lower cutting forces generated.
- Cutters can run with higher feed rates and better ramping capacities.
- Cover extensive workpiece materials.
- Superior productivity and better insert utilisation/cost per edge.
- Able to convert all milling applications.
- Improve tool life and chip evacuation.
- Superior overall performance.

Experience the advantages at your Authorised Kennametal Distributor or at **www.kennametal.com**.

KENNAMETAL®

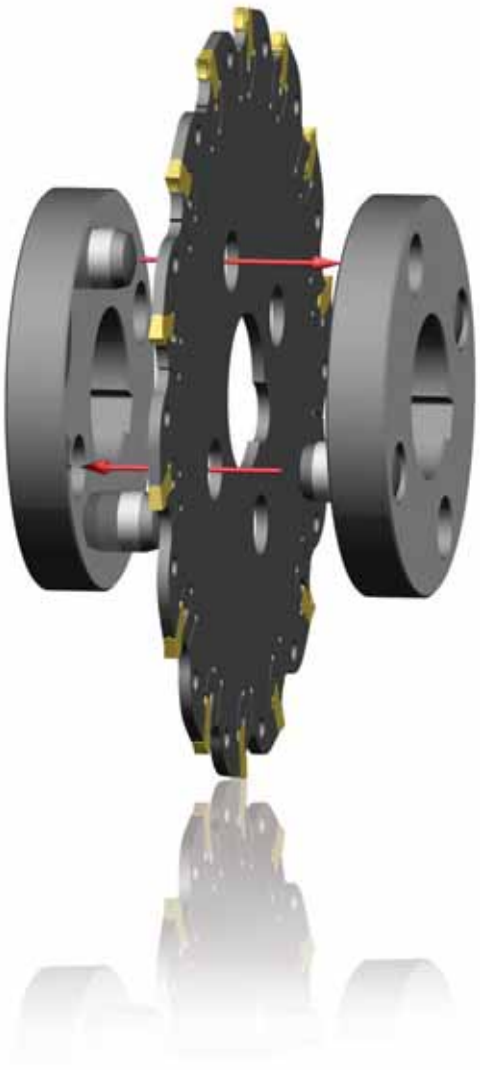
KVNS™ Slotting Cutter

Primary Application

The KVNS slotting cutter enables diameters from 63–250mm and insert widths from 1,6–4mm. It is a perfect solution for small groove widths, grades, and geometries and suits most materials. Drive rings and support rings are available; use these items to get the maximum support for the cutter body.

Features and Benefits

- Slot widths from 1,6–4mm.
- Grades and geometries to suit most workpiece materials.
- Drive rings and support rings available, must be ordered separately (in pairs).
- Self clamping inserts.
- 1,6–4mm slot width range.
- Positive chipforming inserts are standard.
- Self-clamping insert seat with fixed stop.
- Excellent for all flat-bottom slotting and cut-off operations.
- Two drive hubs required for each cutter body, except when using two drive supports (must be ordered separately, in pairs).



- Positive chipforming inserts are standard.
- Self-clamping insert seat with fixed stop.
- Excellent for all flat-bottom slotting and cut-off operations.
- Two drive rings required for each cutter body (must be ordered separately, in pairs).

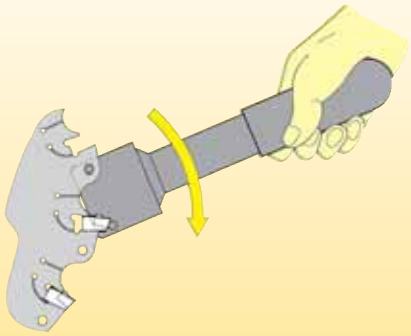
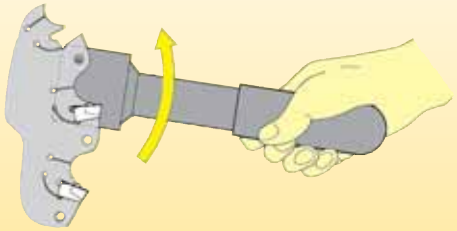
Secure Clamping • Self-Clamping Insert Seat for Maximum Machining Safety



Using the assembly wrench:
Fitting the insert



Removing the insert

- Exact position of the insert guaranteed by the positive stop.
- Maximum possible insert repeatability with dual positive prism clamping.
- Powerful, secure clamping guarantees high peripheral speeds.

SN Slotting Cutter

Primary Application

SN slotting cutters are perfect for deeper applications that require the cutting load to be shared from one insert to the other.
Provides groove widths from 4–14mm and cutter diameters from 80–250mm as well as an economical way to achieve balanced cutting.

Features and Benefits

- Cutters available in arbor mount.
- Inserts with four indexes.
- Staggered key ways in mounting bore, used for multiple ganged cutters.
- Slot width 4–14mm.
- Three insert geometries available: -GP, -GE, and -T.
- Requires only one spare part.
- Economical to use.

- 4–14mm slot widths range.
- Four indexes per insert.
- Three chipformers available.
- Two keyways for staggered mounting.
- Requires only one spare part.
- Economical to use.

NOTE: Use “Light Machining” values as starting feed rate.

LN Slotting Cutter

Primary Application

LN slotting cutters offer arbor and shell mill cutter options, groove widths from 6–13mm, and cutter diameters from 80–200mm. Easy to adjust radially in 0,50mm increments.

Features and Benefits

- Cutter available in arbor and shell mounts.
- Groove width 6–13mm.
- Groove width can be changed by consulting additional chart; this involves changing insert and insert screw.
- Staggered internal keys.
- Positive chip grooves.
- Easy width adjustment through insert thickness.
- Full side and face cutting.
- Neutral and positive chipforming inserts are standard.
- Four insert cutting edges.
- Requires only one spare part.

- 6–13mm slot width range.
- Easy width adjustment through insert thickness.
- Right-hand and full-side cutting versions.
- Neutral and positive chipforming inserts are standard.
- Four insert cutting edges.
- Two keyways for staggered mounting.
- Requires only one spare part.

- LNEx narrow slotting 6–13mm slot width.
- Utilises wider inserts in standard cutters.
- Cutting width of this unique LNEx insert style for narrow slotting cutters can be adjusted.
- The width can be increased by 0–1mm increments.
- Refer to the insert combinations in the table below for insert selection.

* Caution: Variation in cutting width range limited to one size (thickness) greater than the standard insert thickness.
** When changing to a wider insert thickness, use the necessary longer screw; see chart for detail.

NOTE: When cutters have 3 rows of inserts, the above table only refers to the outer insert on both sides of the cutter.
When using inserts with a radii of 2,40mm or greater there is a need to modify the insert pocket; modify to 2.50 x 45° chamfer.

- LNEx narrow slotting 6–11mm slot width.
- Utilises wider inserts in standard cutters.
- Cutting width of this unique LNEx insert style for narrow slotting cutters can be adjusted.
- The width can be increased by 0–1mm increments.
- Refer to the insert combinations in the table below for insert selection.

NOTE: Use “Light Machining” values as starting feed rate.

KSSM™ Slotting Cutter

Primary Application

With insert grades and geometries for most materials, the KSSM fixed-width slotting cutters are a cost effective solution for the general engineering market. Very precise adjustments to achieve consistent widths are possible with the variable width and enables customers to change the tool from right hand to left hand with a change of cartridge.

Features and Benefits

- Cutters available in arbor and shell mounts.
- Cutters right and left hand and full slotting have fixed widths.
- Groove widths: Fixed 15,80mm; Adjustable 14–23,30mm.
- Rapid adjustment mechanism.
- Large insert selection — grades and geometries.
- Wiper inserts.
- Insert radii from 0,15–6,35mm.
- Right-hand and left-hand cutters with .359" depth of cut.
- Diameter range is 100–200mm.
- Large selection of insert geometries and grades to cut most workpiece materials.
- Four insert cutting edges.
- Five insert radii available.
- Faceted inserts for superior surface finishes.

- Right-hand and left-hand cutters with 9,1mm width of cut.
- Large selection of insert geometries and grades to cut most workpiece materials.
- Four insert cutting edges.
- Various radii available.
- Faceted inserts for superior surface finishes.

- Rapid adjustment and setting via unique cam adjustment mechanism.
- Large selection of insert geometries and grades to cut most workpiece materials.
- Four insert cutting edges.
- Wide choice of insert radii.
- Two keyways for staggered mounting.
- Wiper insert facets for superior surface finishes.

.S..GB2	0,17	**0,43**	0,68	0,13	**0,32**	0,51	0,11	**0,28**	0,44	0,10	**0,26**	0,41	0,10	**0,25**	0,41	.S..GB2

NOTE: Use “Light Machining” values as starting feed rate.

- Right- and left-hand cutters.
- Large selection of insert geometries and grades to cut most workpiece materials.
- Four insert cutting edges.
- Wide choice of insert radii.
- Faceted inserts for superior surface finishes.

- Rapid adjustment and setting via unique cam adjustment mechanism.
- Large selection of insert geometries and grades to cut most workpiece materials.
- Four insert cutting edges.
- Wide choice of insert radii.
- Two keyways for staggered mounting.
- Wiper insert facets for superior surface finishes.

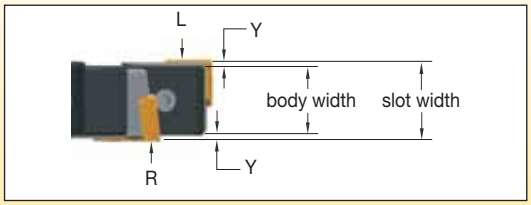
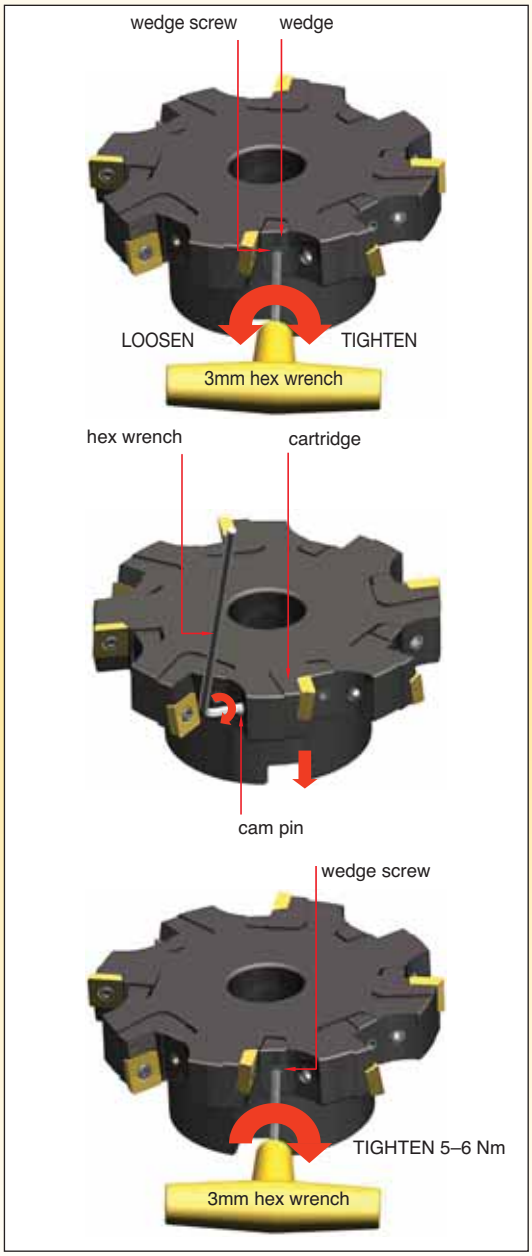
NOTE: Use “Light Machining” values as starting feed rate.

KSSM Slot Width Adjustment Instructions



1. Measure body width at pocket 1 (per stamp on tool body) behind cartridge.
2. Zero tool presetter at pocket 1 behind cartridge.
3. Move presetter over the insert and set distance Y. Y = (Desired Slot Width–Body Width)/2.
4. Zero over insert at starting pocket (pocket 1).
5. Adjust remaining cartridges on the same side.
6. Return to starting pocket and start with step 2 for opposite side of cutter.

KSSM Cartridge Adjustment Instructions



1. Insert 3mm hex wrench into STCM Screw.
2. Rotate 3mm hex wrench counter-clockwise to loosen wedge.
3. Rotate 3mm hex wrench clockwise to lightly tighten STCM screw to approximately 1 Nm, so the wedge is touching the cartridge and cutter body. This creates some slight resistance against the cartridge during the adjustment.
4. Insert hex wrench into cam pin behind cartridge.
5. Rotate wrench to adjust cartridge to desired position.
6. For best accuracy, back cam pin off, so you can feel it is not touching the sides of the slot in the back of the cartridge.
7. Remove wrench from cam pin.
8. Insert 3mm hex wrench into STCM screw
9. Tighten STCM screw to 5,1–6,2 Nm prior to using the cutter. Kennametal torque wrench KTW45 or alternate torque wrench should be used.
10. Double check cartridge position to assure no movement.

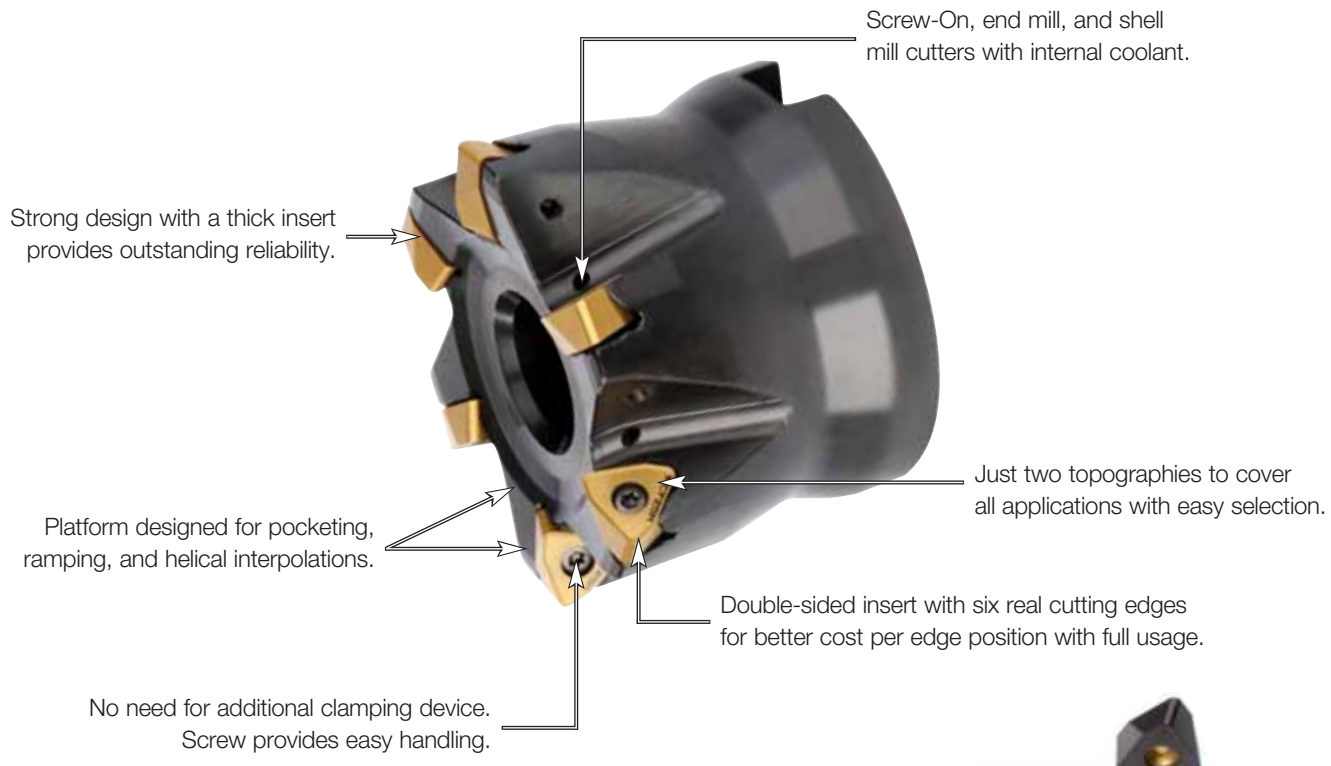
KenFeed™ 2X • The Ultimate and Innovative Concept for Applying the Latest High-Feed Milling Strategies

Primary Application

KenFeed 2X is a double-sided trigon insert with six cutting edges engineered to provide you a superior MRR and productivity through high-feed rates for roughing operations.

Features and Benefits



- Dramatically improves MRR using the latest milling strategies.
- Engineered to run up to 2,5mm fz.
- Ideal for pocketing, ramping, and helical interpolations. Z-plunge capabilities.
- First choice for deep cavities or from 3 x D.

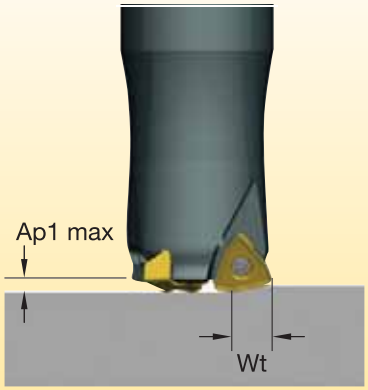
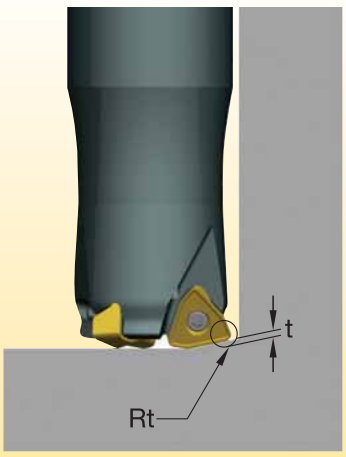
General Programming Information for Applying KenFeed 2X • IC09

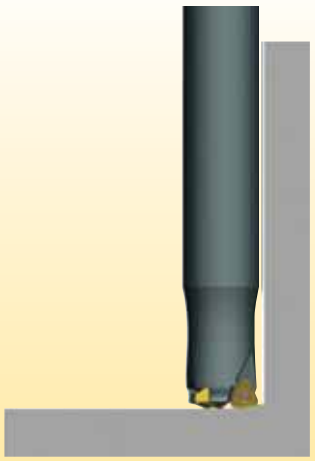
Rt	Wt	t
2.70	8.15	1.15



Small Ap1 values and higher feed rates generate lower cutting forces versus traditional milling strategies.



For CAM programming, the loads can be programmed as a toroidal tool type by using the Rt value as the insert radius.



Recommended when long overhang is necessary due to lower radial forces. Maximum L/D ratio of 10 x D.

KenFeed™ Mini • Small High-Feed Milling Cutters for Machining Small and Medium Components

Primary Application

Roughing operations through the latest milling strategies up to 55 HRC. Specially suited for small parts or machines with lower power capacity. **The KenFeed Mini delivers higher productivity with reduced tooling costs.**

Features and Benefits

Platform designed for pocketing, ramping, and helical interpolations.

Screw-On and shell mill cutters with internal coolant. Coolant holes: better chip evacuation and higher the tool life.

Excellent runout accuracy increases general performance and higher tool life.

Just two topographies to cover all applications with easy selection.

Strong design capacity to support higher cutting forces and unstable situations.

Insert and body design with superior copy milling capabilities enable us to run the cutter with true ramping, profiling, and pocketing capabilities.

- Engineered to use with small machines and/or components using high-feed milling strategies.
- Fine-pitch cutters boost productivity; able to run up to 1,5mm fz.
- Pocketing, ramping, and helical interpolations.
- First choice above 3 x D applications.

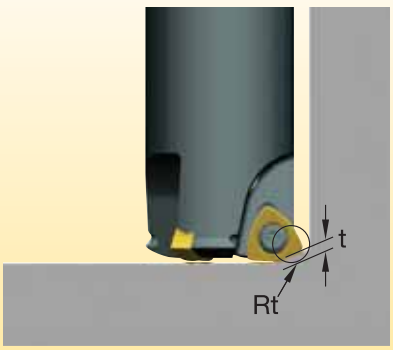
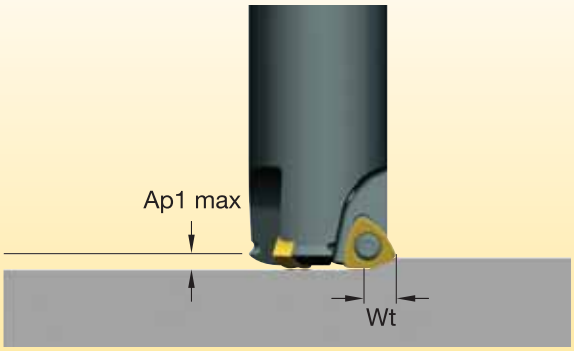
NOTE: Use “Light Machining” values as starting feed rate.

General Programming Information for Applying KenFeed Mini

Rt	Wt	t
1.00	2.40	0.40



For CAM programming, the loads can be programmed as a toroidal tool type by using the Rt value as the insert radius.



Small Ap1 values and higher feed rates generate lower cutting forces versus traditional milling strategies.

Rodeka™ • The New Round Insert Generation

Primary Application

Kennametal introduces a new and revolutionary double-sided round milling insert capable to run in multiple types of milling operations and workpiece materials, providing the latest double-sided insert technology to boost your productivity with the most efficient cost per edge.

Features and Benefits

Double-sided insert with up to 12 cutting edges for a more productive cutting process.

Screw-On, end mill, and shell mill cutters with internal coolant.

Higher clearance in bodies to permit pocketing, profiling, and 5-axis machining.

Unique anti-rotation feature for excellent stability with higher feed rates and cutting forces. User-friendly insert rotation.

Three insert and topography styles to cover any type of component and application.

*To learn more, **scan here**.*

For instructions on how to scan, please see page xxix.

- Double-sided round inserts with 12 indexable positions.
- Anti-rotation features enable higher cutting data and extra stability.
- Pocketing and profiling capabilities.

Indexable Inserts • RNGJ12....

- -FLDJ geometry is for non-ferrous metals.
- -LD geometry is the first choice for stainless steel and titanium machining at lower cutting forces.
- -GD geometry is for general use in steel and for stainless steel.
- -HD geometry is the first choice for heavy machining, high-strength steel and cast iron.

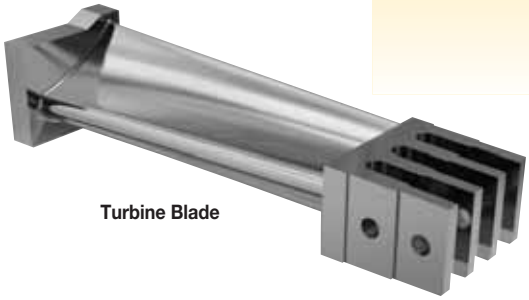
Rodeka 8 Turbine Blade Version

Revolutionary double-sided round insert engineered for turbine blade machining. Special geometries, insert styles, and dedicated cutter bodies have been developed to serve this demanding application.

Power Plant

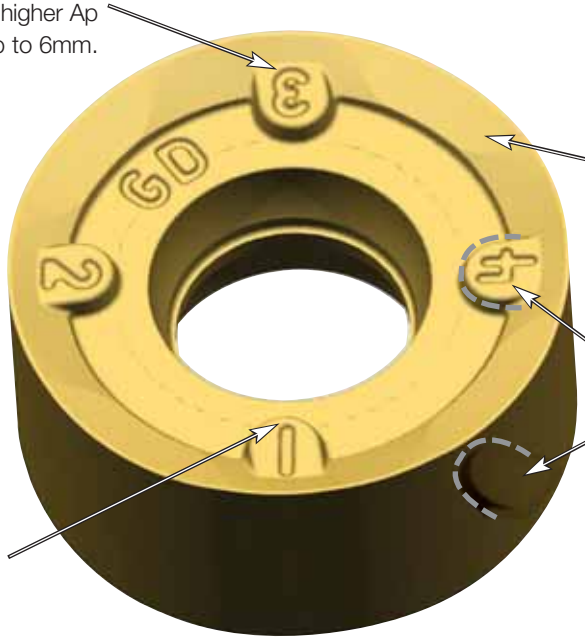
Steam Turbine

Rodeka 8



Turbine Blade

Four indexes per side, in total eight cutting edges. With higher Ap capabilities, up to 6mm.

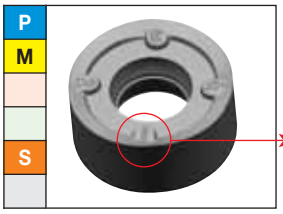


Specific high positive geometries with improved chip forming and higher tool life.

Insert location twisted by 45° between top and bottom side for equal performance over all eight cutting edges.

Unique anti-rotation feature with higher contact area for excellent stability, allowing higher feed rates.

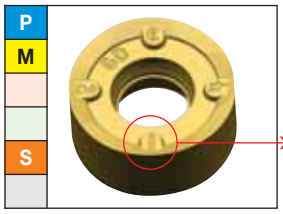
-LD



Light/Medium Machining

First choice for stainless steel and titanium machining.

-GD



Medium/Heavy Machining

First choice for medium/heavy operations. Forged blades or "bad skin".

KDM • Strong, Flexible, and Highly Accurate

Primary Application

Roughing and finishing milling operations on complex parts. First choice for die and mould industry up to 55 HRC.

Features and Benefits

Platform Features

- Big draft clearance angle to improve the pocketing operations performance.
- Big clearance area in the bottom, superior ramping, and helical values.
- High accuracy and tight runout.

Value Proposition

- Real HSM capabilities: more teeth and close accuracy.
- Strongest and most rigid design for roughing operations.
- Addressed to the die and mould and general engineering markets, mainly.
- PSTS and ground inserts are offered through different inserts sizes.
- Shell mill, Weldon® and straight shank, and Screw-On body cutters.
- Multiple grades available; wide range of workpieces and applications.

- Engineered for maximum performance.
- High runout accuracy.
- Suitable for die and mould manufacturing.

NOTE: Use “Light Machining” values as starting feed rate.

- Engineered for maximum performance.
- High runout accuracy.
- Suitable for die and mould manufacturing.

NOTE: Use “Light Machining” values as starting feed rate.

More than just the right tool • the ultimate solution.

That's **Beyond BLAST.**™

That's **Different Thinking.**

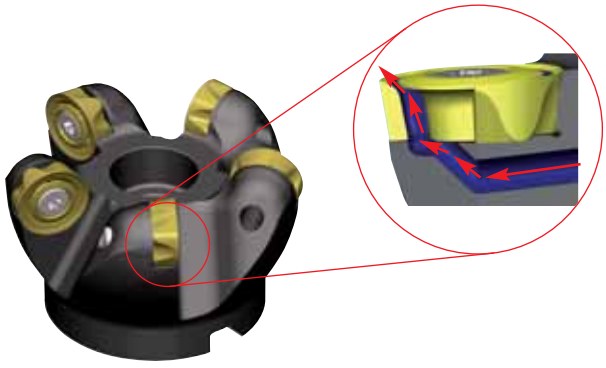
At Kennametal, innovation follows vision. Our revolutionary products and services are inspired by asking "what if?" The solutions that follow — like our Beyond BLAST through-coolant inserts — deliver remarkable results in the world's most demanding machining environments.

A cutting-edge insert that delivers coolant precisely at the cutting edge. Now that's Different Thinking. That's Kennametal.

To learn more about your productivity gains using Beyond BLAST technology, visit www.kennametal.com.

Milling

- Beyond BLAST technology uses low-pressure conditions to offer many of the high-pressure performance benefits.
- Delivers superior performance on titanium, using either high- or low-pressure coolant systems.
- Effective thermal management results in reduced cutting temperatures, improved lubricity, superior chip control, and longer tool life.
- Beyond BLAST for milling increases tool life by up to 100% compared with conventional coolant delivery systems.



beyond™ BLAST™

KSRM™ • Multipurpose Milling Cutters

Primary Application

Specially developed for machining titanium and stainless steel. KSRM platform enables you to pocket, profile, ramp, and plunge with up to 1mm (.039") fz with consistent performance, providing outstanding metal removal rates with the lowest cutting forces in roughing applications.

Features and Benefits

- Engineered for titanium and stainless steel machining.
- Anti-rotation components feature eight indexable positions.
- Pocketing, ramping, plunging, and helical interpolation capabilities.

Spare Parts

D1 max	insert screw	Nm	anti-rotation screw	Torx Plus driver
32	MS2077	2,3	MS-2225	DT15IP

- Engineered for titanium and stainless steel machining.
- Anti-rotation components feature eight indexable positions.
- Pocketing, ramping, plunging, and helical interpolation capabilities.

Indexable Round Inserts • KSRM

- SGE and ELE are the first choice for titanium machining.
- SGE geometry is the first choice for medium and heavy applications.
- ELE is the first choice for lower cutting forces to avoid built-up edge.

- Diameter range from 63–200mm.
- Engineered for roughing titanium with large depths of cut through positive geometry inserts.
- Anti-rotation feature allows up to six indexable rotations.

Beyond BLAST™ KSRM™ • Next Generation Round Inserts with Through Coolant

Primary Application

Specially developed for machining titanium. Beyond BLAST KSRM platform boosts your productivity with its new and revolutionary technology, PCT (Precision Coolant Technology), enabling consistent performance and providing outstanding metal removal rates and longer tool life.

Features and Benefits

Platform Features	Functions
Channeling coolant through the insert.	Increase productivity, tool life, and chip control.
Anti-rotation feature with six indexes.	Superior productivity and better insert utilization/cost per edge.
High positive topography with strong cutting edges.	Long tool life and better MRR.
High clearance on the cutters and inserts.	Able to convert all milling applications.

*To learn more, **scan here**.*

For instructions on how to scan, please see page xxix.

beyond BLAST™

- Use PCT technology; coolant through the insert.
- Engineered to provide the maximum performance in titanium machining.
- Anti-rotation feature allows up to six indexable rotations.
- Pocketing, ramping, plunging, and helical interpolation capabilities.

Indexable Insert • BB KSRM

- Revolutionary concept of channeling coolant through the insert.
- Engineered to provide the maximum performance in titanium machining.
- ELF geometry for lower cutting forces to avoid built-up edge.
- SGF in the first choice for higher chip load and heavy applications.
