KENNAMETAL®

Since its inception in 1938, Kennametal has understood precisely how to improve manufacturing performance and profitability — by introducing unparalleled products and services to reduce operating costs and lead times.

These 2000+ pages bring you the latest in milling, holemaking, turning, and tooling systems products and superior services — all specifically engineered to enhance overall productivity, even in the most challenging metalworking applications. Rely on Kennametal to significantly boost manufacturing competitiveness. To learn more, contact your Kennametal Representative or Authorised Kennametal Distributor.

please contact your Kennametal Representative or
Authorised Kennametal Distributor, or visit www.kennametal.com.

Environment

Kennametal's intimate understanding of the energy marketplace — including customer processes and applications — allows us to proactively address production and sustainability concerns with solutions tailored to your needs. We deliver superior value because we listen closely to you, our customer, and innovate based on your feedback. Our goal is to help you be more competitive — both at home and on a global scale.

Best Practices in Productivity

As your trusted partner for optimised production, Kennametal offers customers a unique commitment to research and development excellence, continually delivering highly innovative ways to enhance productivity. Certification to ISO 9001, QS 9000 TES, and VDA 6.4 provides the highest possible quality standards.

Best Performance, Less Environmental impact

With technology, we can do both. Kennametal helps customers focus on the root causes of unsustainable behavior in highly complex manufacturing systems, while at the same time improving cost structure, quality, and performance. In addition to offering the latest in metalcutting tools and technology, our Advanced Engineering team will analyse your existing production processes and help identify new methods to improve your overall performance.

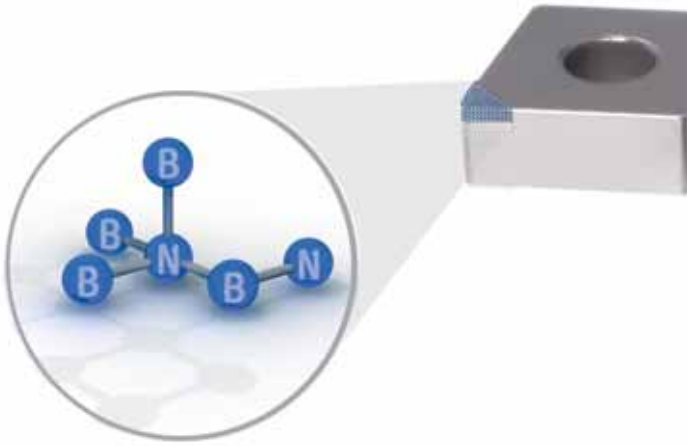
Turning

Product Highlights

Superhard Materials • PCBN and PCD

Abrasion resistance and toughness are the two most important properties in assessing the efficiency of cutting tool materials. Abrasion resistance is primarily a function of hardness, and, in this respect, diamond (PCD) and cubic boron nitride (CBN) are superior to all other known materials.

For more information, see pages B132–B197.



beyond™ BLAST™

Beyond BLAST™

An entirely different approach to machining high-temperature alloys. We determined that the most effective way to deliver coolant would be to channel it through the insert — ensuring that it hits exactly where it does the most good. That means, more efficient coolant delivery at a fraction of the cost of high-pressure coolant systems. By precisely controlling coolant application, Beyond BLAST enables you to lower your energy consumption, saving you even more money and reducing your impact on the environment.

For more information, see pages F2–F11.

Beyond™ PVD Grades

Advanced PVD coatings using Beyond technology are well suited to resist the high temperatures associated with machining tough alloys. By offering increased tool life (by 30–40%), the general engineering, transportation, aerospace, energy, and earthworks markets can experience benefits in their profitability. They can also realise benefits by utilising the strength of the new PVD coating in combination with the broad product offering to perform turning, grooving, and cut-off operations in a wide array of materials and applications while maintaining consistent chip control and minimising insert edge wear.

For more information, see pages B2–B115.

Grooving and Cut-Off : -CL and -GUP Geometries

The A2™ CL geometry maximises your cut-off productivity. The A2-CL geometry offers tighter chipbreaker capabilities when machining low-carbon steel, excellent chip evacuation in low-feed applications, and improved stability and rigidity. The A4-GUP geometry, available in moulded and precision-ground styles, provides a positive rake angle, enhanced chip control, and lower cutting forces. The -GUP geometry offers up to 180% longer tool life and higher productivity in steel, stainless steel, and high-temperature alloy materials.

For more information, see pages A2-CL: D13
A4-GUP: D70, D73–D74.

Kennametal Select

Kennametal Select products make it simple to get the most out of your inserts — and your money. Every insert is gold, which exposes wear as the tool continues to be used. This makes it easy to detect when an insert is ready to be changed — maximising the product's value and protecting the workpiece. Also, because Kennametal Select inserts can be used in most applications, a single insert can take on any number of tasks, thus reducing your inventory. Kennametal Select products are also reliable enough to cut steel, stainless steel, cast iron, and high-temperature alloys, enabling quick changes in workpiece materials without the need to swap inserts, saving time and money.

For more information, see pages F106–F130.

Holemaking

Product Highlights

Hole Finishing with Kennametal

Only Kennametal is capable of offering you the best, customised solution for your application. Kennametal owns the entire process chain, from raw material, insert pressing, tool body design, brazing, sintering, grinding, coating, and so on, up to reconditioning. Kennametal is the only source in the metalworking industry from where you can get all types of hole finishing tooling, from reaming and fine boring to motion tooling, directly from one hand. Therefore, Kennametal can offer you the best-fitting solution for your machining challenge, giving you the choice of tooling without any limitations in regard to portfolio or capability.

For more information, see pages K1–K205.

Drill Fix™ DFS™

Drill Fix DFS combines the economical squared-outboard insert with the superior centring capabilities of the trigon inboard insert. The DFS indexable drills offer increased metal removal rates combined with high surface quality and hole straightness.

For more information, see pages J14–J22.

GOdrill™ • Kennametal's First Microdrill

The all new GOdrill addresses drilling operations in a diameter range of 1–12,7mm (.0394–.5") in a broad variety of materials and applications, such as fuel systems or medical components. Due to its very unique design, the GOdrill expands the advantages of modular drills into the small diameter range: high-end grades, wear-indicator coating, and new, patented geometries enable full utilisation of the drill's tool life capacity.

For more information, see pages G5–G14.

HP Beyond™ Drills for Steel and Stainless Steel

HP Beyond Series Solid Carbide Drills are designed specifically for stainless steel and steel applications, offering high performance and long tool life in regular steel, titanium, and iron materials. By combining unique Kennametal technologies, such as the HP point, flute geometry, and a new Beyond grade technology into one tool, the B2_HP Beyond is the ultimate high-volume production tool.

For more information, see pages G21–G37.

KSEM PLUS™ Modular Drill System

The KSEM PLUS drill concept is simple but effective. It combines the benefits of the KSEM™ modular drill (high feeds and length-to-diameter [L/D] ratios) with the benefits of an indexable drill (high speeds and low consumable costs).

For more information, see pages H36–H47.

Beyond™ High-Performance Solid Carbide Taps

Solid carbide taps offer higher productivity and outstanding performance in a wider range of materials than formerly possible. Get more production from a single tool and superior accuracy of product thread that surpasses the competition. Kennametal High-Performance Solid Carbide Taps are available in various specifications with enhanced precision and design, which translates into longer tool life, excellent performance, and exceptional wear resistance.

For more information, see pages L2–L29.

Solid End Milling

Product Highlights

HARVI™ High-Performance End Mills for Roughing and Finishing with One Tool

HARVI takes high-performance roughing, semi-finishing, slotting, and profiling to the next level. The line is designed to provide maximum metal removal rates and achieve supreme surface conditions. A wide range of diameters and corner radii are available from stock.

For more information, see pages M10–M25.

KenFeed™ End Mills for High-Feed Milling

A unique tool with new, 6-flute style for high productivity, the KenFeed end mill is specifically engineered to machine hardened steel up to 67 HRC at extreme speeds and feeds. Necked shanks provide extended reach in deep cavities and high feed rates up to 0,6mm per tooth on a 20mm tool. Machine hardened materials at 2–3x the metal removal rate of competitive end mills. Wide range of cutting diameters, down to 6mm for small- and medium-pocket work. Innovative new geometry maximises metal removal rates and lowers manufacturing costs.

For more information, see pages M26–M30.

KCN05™ Diamond Coated Carbide Routers

Kennametal has the correct milling solutions engineered for machining difficult CFRP (Carbon-Fibre Reinforced Polymer) and non-ferrous components. KCN05 solid carbide router products provide excellent tool life and produce smooth finishes with improved edge quality. The unique geometries are free cutting, reduce heat generation, and provide high-quality machined surfaces.

For more information, see pages M65–M71.

GOmill™ • The Economical Milling Cutter Line

The GOmill line is specifically engineered to work on short length-of-cut applications in multiple workpiece materials, like soft and hard steels up to 48 HRC, stainless steels, high-temperature alloys, and cast iron. With the very short overall length and soft cutting geometries, the line is made to conform to the growing market of mill-turn machines. The 3-flute sharp and 4-flute chamfer versions support roughing, semi-finishing, and finishing applications; the 3-flute ball nose tool supports roughing and semi-finishing applications; and the 2-flute ball nose version supports finishing applications. All three geometries work in slotting as well as side milling applications up to 1 x D depth of cut.

For more information, see pages M117, M122, M126, M130.

MaxiMet™ Carbide End Mills for High Metal Removal Rates and Superior Surface Finishes

Designed to significantly reduce machining time in aluminium! The innovative geometry designs include a wiper facet for superior surface finish on aluminium parts. MaxiMet takes roughing and finishing cuts with one tool. Slotting is effective up to full 1 x D axial depth. Side milling is effective up to 0,5 x D radial and 1,5 x D axial depth. The 3-flute series uses unequal flute spacing for chatter-free performance. Effective in a full range of machine speeds. Multiple corner radii and extended neck configurations are available as standard.

For more information, see pages M50–M53.

Indexable Milling

Product Highlights

Dodeka™ Series • Leader in Advanced Face Milling Applications

Dodeka Mini and Dodeka MAX™ are the most comprehensive face milling boosters on the market today. Twelve true cutting edges per insert mean low cost per edge and high productivity. With Beyond™ premium milling grades, you will see up to 30% higher Metal Removal Rates (MRR), 25% lower cutting forces due to real soft cutting action, and up to 35% better tool life in light to heavy machining.

For more information, see pages O2–O29.

MEGA Series • Superior Heavy-Duty Milling

With four true cutting edges per heavy-duty MEGA insert, you know you are getting the low cost per edge and high productivity you need and have come to expect from Kennametal. The soft cutting edge design enables 30% lower cutting forces, and the carbide shim provides protection to the cutter body. Choose MEGA inserts for all of your steel and cast iron indexable milling needs.

For more information, see pages O30–O47.

Beyond BLAST™ • More Than Just the Right Tool — The Ultimate Solution

The Beyond BLAST KSSM™ 45° and KSRM™ platforms utilise Precision Coolant Technology (PCT) to aggressively apply coolant directly to the cutting area. Not only does this reduce heat at the cutting edge, but it also assists with reducing tool and chip friction, increasing chip evacuation, and relieving shear stress.

For more information, see pages O48–O53.

Rodeka™ • The New Round Insert Generation

Kennametal introduces a new and revolutionary double-sided round milling insert capable to run in multiple types of milling operations and workpiece materials, providing the latest double-sided insert technology to boost your productivity with the most efficient cost per edge.

For more information, see pages R12–R19.

Mill 1™ • High-Performance Shoulder Milling Platform

The multifunctional Mill 1 platform works with all tool materials in shoulder, ramp, slot, plunge, and helical milling with one insert style to improve productivity and reduce inventory and machining costs. The super positive cutting rake, soft cutting action, and low cutting forces enable higher feed rates and spindle protection. Innovative insert and cutter body designs offer improved ramping capabilities.

For more information, see pages P2–P62.

Tooling Systems

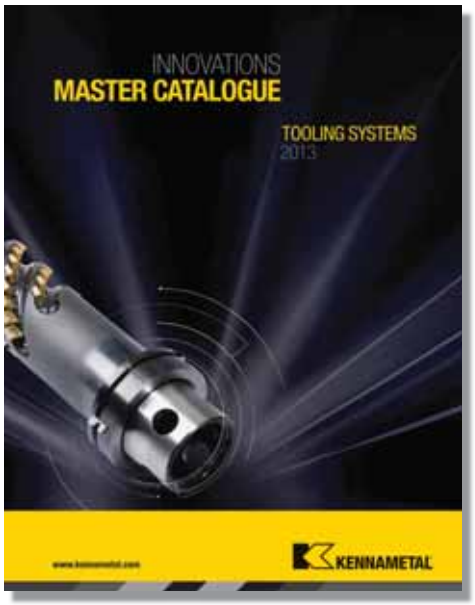
Product Highlights

New Catalogue

New Comprehensive Tooling Systems Catalogue

Kennametal is proud to present the latest Kennametal Tooling Systems catalogue with innovative products on more than 1,100 pages! In this catalogue, you will find information about KM Micro™, KM Mini™, KM™ Quick Change, KM4X™, HSK shank tools, BTKV and CVKV shank tools, BT shank tools, CV shank tools, DV shank tools, QC and R8 shank tools, straight shanks, collets and sleeves, and thermo shrinking machines.

To view the PDF, please go to www.kennametal.com



KM4X™ • The New Choice for Heavy-Duty Milling

KM4X is the latest version of the KM™ spindle interface targeted at heavy-duty machining operations and is a top choice for machining large, structural, tough-to-machine materials, like titanium, for the aerospace industry. The portfolio consists of rotating adaptors and static tooling to support the tough and heavy machining markets. Additional products include spindle component packages as well as static clamping units to support turning and mill-turn opportunities.

KM™ Quick Change

KM Quick Change Tooling is a central component in achieving dramatic improvement in machine and cutting tool use. It's the choice of manufacturers requiring maximum machine output. The necessary tasks of changing, setting up, and gaging tools create an excess of machine downtime. For small batch manufacturing operations requiring these frequent setups, KM Quick Change Tooling is the most efficient method for reducing lost time and improving the overall quality of the machining process by generating greater productivity and increasing profits.

HSK Shank Tools

ERICKSON™ HSK Face Contact short taper tooling is manufactured from premium materials and to the latest DIN/ISO specification standards. Form A versions are generally used in machining centres and milling machines with automatic tool changers.

Engineered Solutions

Coordinated global resources with world-class manufacturing process development and implementation capabilities.

Whether it's a single tailored tool required to address a specific part feature or the development of a comprehensive manufacturing process for use on existing or newly acquired production equipment, Kennametal's team can manage the development, personnel training, and successful implementation of the complete solution.

Global implies just that. Globally coordinated manufacturing process development, implementation, and optimisation support at machine tool builders, end user engineering or corporate offices, and end user production facilities, regardless of their respective geographies. Well-organised, highly linked staff reside in the Americas, Europe, and Asia/Pacific regions. Globally standardised design and manufacturing systems enable highly coordinated project management and implementation results.

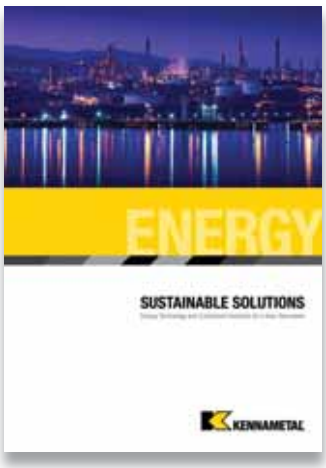
Key alliances with machine tool builders and other leading manufacturing technology enablers ensure a complete solution, optimising the entire process — not just portions of it. This results in the most effective and efficient manufacturing process possible, leading to low implementation time and cost and rapid return on investment.

For more information, please contact us at 1.866.646.7113.

Energy

Energy Engineered Solutions

Kennametal is more than a supplier of tooling solutions. With a thorough understanding of the energy segment's process and application challenges, we proactively address production concerns to deliver productivity to customers seeking peak performance in demanding environments. Kennametal's success is based on our capabilities — our ability to work with you on customised solutions to optimise your results and our willingness to engage with a broad spectrum of materials, metalworking solutions, application and custom component manufacturing, and supply expertise. Our drive for success, enabled through our advanced materials sciences, application knowledge, and commitment to a sustainable environment, results in a broad portfolio of innovative, custom, wear-resistant solutions.



Please also see the new Kennametal Energy catalogue (B-11-02786).

Engineered Solutions

Automotive

Automotive Engineered Solutions

Traditionally, Kennametal has been a strong player in the transportation field, pioneering innovative solutions with automotive, shipbuilding, and railroad customers. We deliver global services and products that exceed our customers' expectations and continually push the boundaries of science. In today's competitive world, no one can support our customers better, and in turn, deliver the continued service and quality that has become Kennametal's trademark.

Kennametal's global reach has helped our customers standardise processes and products to improve both cost and quality. We offer an intimate understanding of the economics of the automotive value chain and unparalleled customised solutions tailored to your needs. We can deliver superior value by listening closely and innovating based on what our customers say. Our goal is to help you be more competitive, at home and on a global scale.

If it rolls, floats, or flies,

Aerospace

Aerospace Engineered Solutions

From lightweight composite materials to exotic alloys, Kennametal is committed to reducing risks and costs in the manufacture of aerospace and defense programs. We partner with customers to implement standard and customised solutions with minimum cost per part and high repeatability in mind. Kennametal has unique capabilities and resources to cover the total manufacturing equation from roughing to automated deburring and finishing. Kennametal's best-in-class technologies and services deliver up to 30% cost reduction and 60% cycle time reduction.

Aerospace component surfaces are one of the key battlegrounds in environmentally friendly manufacturing. Surface treatments not only improve appearance of the part but also enhance wear resistance, provide corrosion protection, and improve friction control. These subtle manufacturing enhancements provide big dividends in the form of fuel efficiency, reliability, performance, and longer part life.

Kennametal has a solution that delivers innovation and productivity.

Service and Support

Kennametal Extrude Hone™

Precision Surface Management

- Fuel efficiency through fine flow tuning — Diesel Fuel System (DFS) and Gasoline Direct Injection (GDI).
- Emission reduction due to better spray shaping.
- Noise, friction, and wear reduction for automatic gearbox components.
- Air flow path enhancement to improve jet or helicopter turbine performance.
- Energy savings with centrifugal impeller pump increased efficiency.
- Surface stress relief on high-pressured thin wall component for extreme safety.

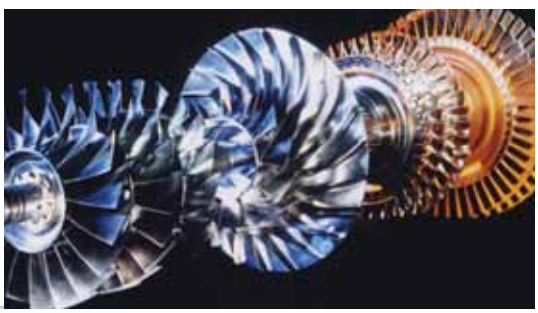
Core Technologies Offer

- **Electrochemical Machining (ECM): Generator, fixture, and cathodes**
  Radiusing, shaping, polishing, surface stress relief.
- **Abrasive Flow Machining (AFM): Media and fixture design**
  Radiusing, polishing, surface stress relief.
- **Thermal Energy Method (TEM): Controlled combustion**
  Minimising risk of hidden burrs and contamination.

Proven Solutions

Easy Access to Service and Support

- Engineering and Feasibility departments.
- Capital equipment solutions.
- Contract Shop activities (ramp up and production).
- Spare parts availability program.
- Metalcutting tooling combined with Precision Surface Management.
- Benefits of worldwide Kennametal logistics.
- Lean expertise to conduct global projects with customers.
- Cost per part solutions/Clic model for equipment.
- Parameters, cathodes, fixtures designs.
- Media design to part.
- Global Full Circle Program increases productivity resulting in less downtime of your equipment.



Service and Support

Kennametal Extrude Hone™

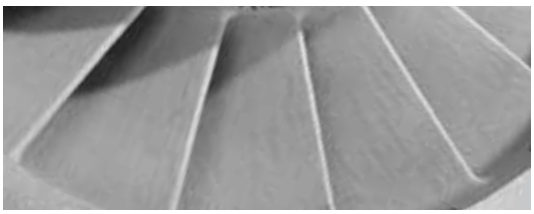
Proven Solution: Save Energy, Save Money

- Improving closed pump impellers inner flow passage roughness to increase up to 11% peak efficiency and lower energy consumption.
- A coal-powered plant equipped with six boiler feed pumps can reduce parasitic loss, representing at least $500,000 annual savings (driving the pumps) by 1% of the power generated.
- This process and savings can also be applied to natural gas centrifugal closed pump impellers.

Precision Surface Management Matters

Kennametal Extrude Hone Abrasive Flow Machining (AFM) surface and flow enhancement solutions provide the energy segment with significant savings in pump efficiency improvements.

- The AFM process is the method of choice for material removal at the area of greatest restriction and surface improvement of passages not accessible by other methods.
- AFM has documented efficiency proven solutions in the automotive and aerospace industries.
- Two-way flow AFM process is a natural fit for closed impellers and diffusers.
- Inner flow passages of the impellers and diffusers benefit from AFM's selective material removal as well as surface finish improvement — both contributing to improved pump efficiency.



Before

After

Proven Solutions
Delivering Results throughout the Value Chain

Working with You

We have a strong focus on customer solutions, which helps develop an accurate understanding of industry needs. This is achieved through collaborative work with key players throughout the value chain:

Original Equipment Manufacturer (OEM)
Our business expertise is providing OEMs with key components, such as pumps, that deliver greater efficiency.

Foundry
Kennametal Extrude Hone™ specialists can bring added value early in the manufacturing chain, so you can deliver more than just a key component and exceed expectations every time.

End User
Currently in the best position to measure efficiency improvements, end users understand the direct impact of savings — anywhere along the value chain. They help us measure performance of the processed component against non-processed, providing a better understanding of efficiency improvement related to the Kennametal Extrude Hone AFM operation. The AFM Center of Excellence, in Irwin, PA, can perform feasibility testing with customer-specific parts to provide the optimal media needed for each process.

Media Is the Edge

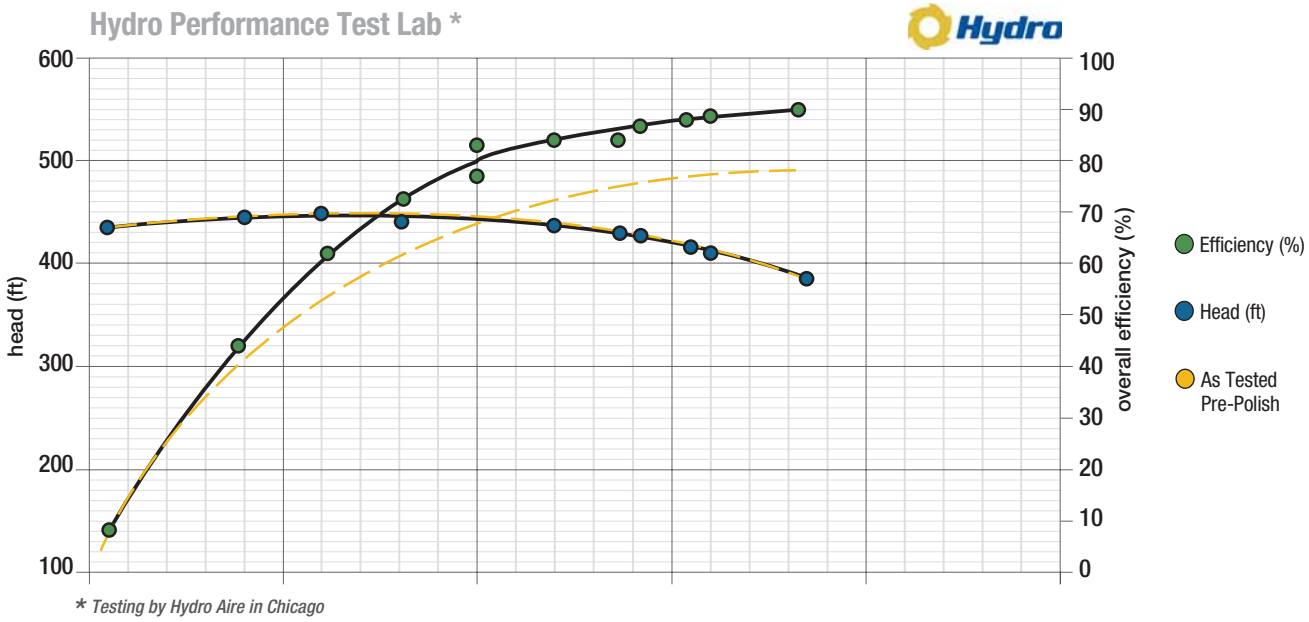
The Kennametal Extrude Hone lab provides the energy industry with specific, engineered medias that deliver the highest performance for closed impeller polishing. We also have specific media with dedicated characteristics to enhance productivity and quality when polishing a closed impeller.

Service and Support

Kennametal Extrude Hone™

Abrasive Flow Machining for Pump Market Validation Testing

Formed in 1969 by a small group of pump engineers in Chicago, Hydro Aire is now the largest independent pump rebuilder with service centers throughout the world. A complete 5000 hp, 42,000 GPM pump test stand, designed in compliance with Hydraulic Institute standard and API 610, is located in Chicago. This is the ONLY independent non-OEM facility with this capability able to generate pump efficiency curves using LabView software.



* *Testing by Hydro Aire in Chicago*

Proven Solutions
The Energy Story

Proving the Pump Efficiency Improvement from the AFM Process

We have selected a 100 hp 1,200 GPM, single impeller overhung process pump as an example to validate the potential efficiency improvement able to be achieved with the AFM process.

1) New PACO™ pump purchased, which is about 79% efficient according to the manufacturer's data.
2) Pump tested and performance curve generated to confirm initial efficiency pre-AFM. Manufacturer data confirmed by our "before AFM" testing.
3) Pump was disassembled and impeller removed to AFM process. Pump was then reassembled.
4) Re-tested pump and generated performance curve.

Results: **Peak efficiency gain of +11%,** bringing the pump to 90% total efficiency! Gains were realized over the full usable range of the pump with **significant power savings** at given pressure and flow rate.

Test Component

Pump Type:	ITT Goulds 12BF
Pump Size:	3 x 4–10
Serial No.:	G1162372
Stages:	1
SG:	1.00
NPSHr:	n/a
Speed:	3600 RPM

Service and Support

Kennametal ToolBOSS™

Kennametal ToolBOSS™

Secure, High-Capacity Solutions

ToolBOSS™ quickly and consistently delivers quantifiable savings in hundreds of metalworking companies worldwide. Much more than a vending unit, the Kennametal ToolBOSS system is a secure, electronically locked tool storage cabinet that can establish 24-hour tool control for high-value items. It issues tools, returns tools, sends to re-work, supports EDI ordering, and provides for multi-vendor security.

Efficiency
Multiple drawers can be selected in one transaction, minimising the time required to manage large stock volumes.

Future-Port
USB interface, as well as a DCS expansion port, for use with RFID and other ancillary equipment.

High-Speed Access
Rapid search and selection of an item is enhanced with LED identification system, guiding users to the correct drawer.

Traceability
Software provides a complete audit trail, tracking component usage details.

Expandability
Expandable up to 10 units per system, providing up to 1.121 secure locations.

To learn more about ToolBOSS, contact your local Authorised Distributor or visit **www.kennametal.com**

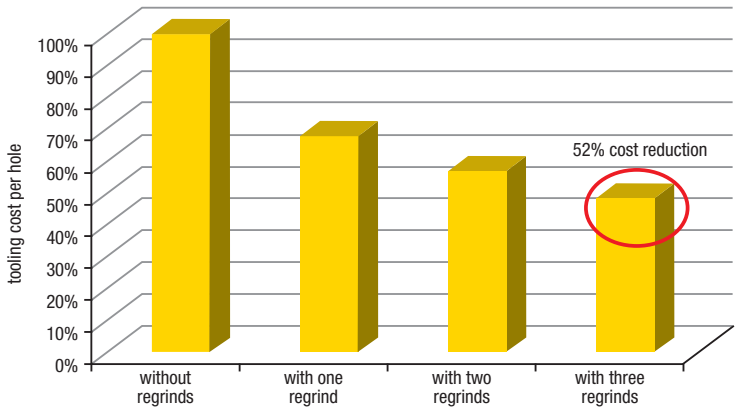
Reconditioning Services

Reconditioning Services

Our Reconditioning Services help optimise the total value of your metalcutting tools throughout their entire life cycle by giving the “like-new” performance characteristics — with rapid turnaround time — so the tools you need are always on-hand and perform just like new.

Reduce Tooling Cost by More than 50%

Example: 4" (10,5mm) HP-Drill B225A10500 KC7315 Material: Alloy steel 30 RC



Using Kennametal’s Reconditioning Services provides considerable savings throughout the life of your cutting tools and can reduce your overall tooling costs more than 50%.

For more information or to find the nearest reconditioning location, contact your local Authorised Distributor or visit www.kennametal.com

Service and Support

Carbide Recycling

Help Preserve and Protect Our Planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

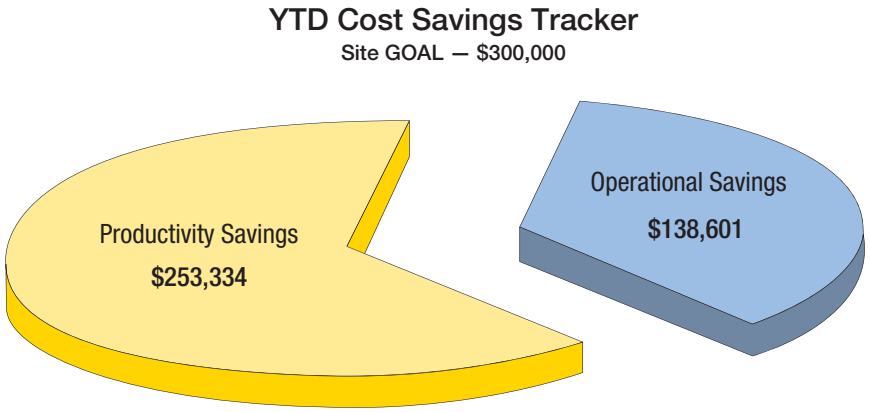
Program is not currently available in all geographical areas. For more information, please visit ***www.kennametal.com/carbiderecycling***

Service and Support

Cost per Part Services Program (CPP)

Build a Long-Term Relationship with the Leader in Metalworking Solutions that Provides:

- Monthly cost savings documented and captured in standardised KPI reports.
- Availability of Kennametal's latest technology to increase productivity and lower cost of operations.
- Onsite technical support available on a constant basis.
- Billing based on the output of your plant that eliminates inventory risk.



Cost per Part Services Programs Are Designed to Take Advantage of Our Wear Solutions Expertise by Outsourcing Your Metalworking Requirements that:

- Improve productivity.
- Reduce risk.
- Manage inventory.
- Lower operational costs.

For more information, contact your local Authorised Distributor or visit **www.kennametal.com**

Service and Support

Customer Application Support (CAS)

Customer Application Support

Get Fast and Reliable Answers to Your Toughest Metalcutting Problems

Our Customer Application Support (CAS) Team is the metalworking industry's leading help desk resource for tooling application solutions and problem resolution.

Easy Access to Proven Metalworking Expertise!

Kennametal Customer Application Engineers assist customers and engineering groups throughout the world with expert tool selection and application recommendations for the entire range of Kennametal tooling.

Service Level Excellence

- Fast telephone response.
- Quick technical solutions.
- Efficient case management.

Services

- Operating parameters.
- Process optimisation.
- Hardware support.
- Tooling selection.
- Troubleshooting.

Best-in-Class Support Tools and Technology

- Materials database.
- Application calculators.
- Tooling performance experts.

Looking for More Products or Product Information?

Use your smartphone or tablet to scan the QR codes throughout this catalogue.

Throughout the Kennametal Innovations Master Catalogue, you will find codes like the shown here that will activate links containing more information about various products and services offered.

The QR codes that you will find within this catalogue are designed to relate to the products or product families on the page where they are found. These codes will link you to expanded product information, such as application videos, informative drawings and animations, extra product charts and graphs, or simply to an expanded online catalogue of products offered by Kennametal for all your drilling, turning, and milling needs.

Helpful Information to Get You Scanning

QR codes are activated when scanned with a dedicated QR scanning application using the onboard camera of your smartphone or tablet.

If you currently have a QR scanner on your smartphone or tablet, look for codes to learn more information about our products. Don't have a QR scanner on your device? It's simple to get one. Just go to your device's application store, and search for a "QR code scanner". Follow your application store's directions on downloading an application, and then launch your QR scanner.

- With your scanner, centre the QR code in the camera window of your application.
- When the scanner locks onto the image, you will be on your way to the embedded information in the QR code.
- Once the webpage, video, or other information linked to the QR code opens or loads, you can freely interact.

When you need information quickly on a product or an extended product catalogue, skip the web search and long website URLs and scan the provided QR codes in this catalogue.

Scan the code at the top of the page to visit our website and online product catalogue.

QR Code is a registered trademark of Denso Wave Incorporated.

Merchandise

Merchandise

New Merchandise Available! Place Your Order Today!

Introducing a new line of Kennametal merchandise. Place an order for any of the following quality products with your Authorised Kennametal Distributor or visit www.kennametal.com.

Solid Performance Polo

100% polyester. No curl/rib-knit jacquard collar. Antimicrobial.

- Colour: charcoal

Windbreaker Jacket

Comfortable fit with a water-repellent shell and mesh lining, lower front pockets for added convenience. 100% polyester. Features elasticised cuffs and an open bottom with a drawstring cord.

- Colour: black

Extreme Colorblock Polo

100% polyester. Moisture wicking, antimicrobial, and raglan sleeves.

- Colour: black/gold

Extreme Cap

Extreme Cap is a classic unstructured cap made of soft laundered cotton for a casual, comfortable feel. Pre-curved visor and six sewn eyelets give this cap the look of a traditional baseball cap. Fabric strap with slide buckle.

- Colour: black and camo

Titleist® DT SoLo® Golf Balls

The new DT SoLo golf ball will appeal to a broad range of golfers seeking the combination of long distance, exceptional feel, responsive short game control, and cut-proof cover durability.

- Colour: white

Hanes® TAGLESS® T-Shirt

100% cotton. Pre-shrunk.

- Colour: black

12 oz. Ceramic Tumbler

Silicone lid. Double-wall ceramic tumbler. 5.5" tall without the lid. Fits in most corporate coffee machines. Includes 1-piece gift box. 11 oz.

- Colour: black with black lid

Majestic Ballpoint Pen

Majestic metal ballpoint pen with chrome trim and coloured centre band.

- Colour: black metal with chrome trim

Dakota Multi-Tool

4" closed. Silver anodised aluminium handles. Features spring-action needle nose and regular pliers, serrated knife blade, straight-edge knife blade, can/bottle opener, file, 2 screwdrivers, Phillips head screwdriver, and more. Comes with nylon belt pouch. Boxed.

- Colour: grey

Jupiter Flashlight

Metal, 17" white LED flashlight. Push button power switch. Wrist strap. Three AAA batteries included (not inserted).

- Colour: black

Bottle Opener

Contemporary design, aluminium bottle opener/ key tag. Ergonomic, curved construction improves handling and safely opens metal bottle caps.

- Colour: black

Collapsible Koozie

Fits 16 oz. water bottles and longnecks.

- Colour: black

Notebook Combo

6-1/4" x 8-1/2". Double spiral binding, elastic pen loop on cover. 80 white-lined sheets (non-refillable).

- Colour: yellow

Aluminium Bottle

The ribbed aluminium bottle is BPA free and has a silicone color band with a matching drinking spout and lid.

- Colour: metal/black/yellow

Inserts for Every Turning Operation

Kennametal, the trusted innovator in metalcutting technology, offers a complete range of indexable inserts for general turning operations. From roughing to finishing, Kennametal has the correct insert.

Plus, Kennametal offers the next generation in tooling with Beyond™. Harnessing advanced science and exceptional experience, our Beyond inserts deliver unparalleled levels of productivity, efficiency, dependability, and profitability.

Features and Benefits

Up to 30% Higher Productivity and Profitability

- Achieve higher metal removal rates (speed, feed, and depth of cut).
- Gain longer tool life.

Versatility

- Products can be applied across a wide range of applications.
- Can be used in low- to high-speed applications.

Reliability

- Deliver uniform wear for predictable tool life.
- Achieve reduced depth-of-cut notching.
- Virtually eliminate chip flow damage.

Complete Portfolio

- The Beyond product portfolio can be used in a complete range of steel, cast iron, and stainless steel ISO turning workpieces.

Technical Details • Features

Post-Coat Treatment

- Improves edge toughness.
- Long predictable tool life.
- Reduces depth-of-cut notching.
- Wide range of applications.
- Reduces stresses.
- Reduces microchipping.
- Improves coating adhesion.

Fine-Grained Alumina Layer

- Provides coating integrity at elevated speeds.
- Higher productivity and dependability at high cutting temperatures.

Micro-Polished Edges

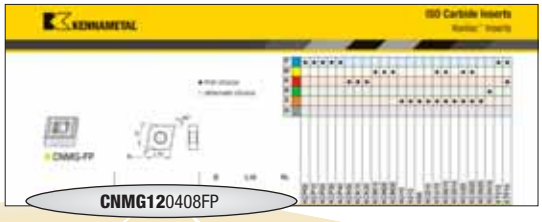
- Improves edge toughness.
- Provides smooth outer surface to reduce forces, friction, and workpiece sticking.

Post-Coat Grinding — Bottom

- Provides secure seating surface.

How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



C — Insert Shape

H	Hexagon 120°	
O	Octagon 135°	
P	Pentagon 108°	
R	Round —	
S	Square 90°	
T	Triangular 60°	
C D E M V	Rhomboid 80° 55° 75° 86° 35°	
W	Trigon 80° with enlarged corner angles	
L	Rectangular 90°	
A B N/K	Parallelogram 85° 82° 55°	

N — Insert Clearance Angle

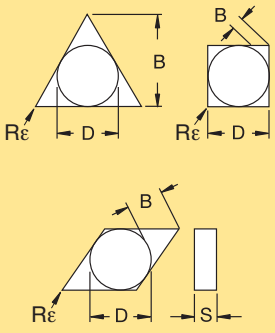
A	3°	B	5°	C	7°	D	15°	E	20°	F	25°	G	30°	N	0°	P	11°	O	Indicated for other clearance angles requiring descriptions.	

M — Tolerance Class

Tolerances apply prior to edge prep and coating



D = Theoretical diameter of the insert inscribed circle
S = Thickness
B = See figures below

Positive Inserts

Screw-On Inserts

- Screw-On inserts are your first choice for I.D. turning of all materials and O.D. turning on small to medium lathes.
- Available in flat-top and chip-control geometries with both moulded and ground peripheries. Suitable for all workpiece materials.

See pages:
Carbide: B88–B115
Superhard: B187–B197

Kendex™ and V-Bottom Inserts

- Kendex positive and V-bottom inserts are your first choice for productive machining of high-temperature alloys on medium to large lathes.
- Available in flat-top geometries with ground periphery.

See pages:
Carbide: B84–B87
Ceramic: B128–B130
Superhard: B185–B186

See pages B128–B129 for V-bottom product listing.

Top Notch™ Profiling Inserts

- First choice for high-production profiling.
- Unique insert clamping design offers superior rigidity.
- Available in chip-control geometries with both moulded and ground peripheries. Suitable for all workpiece materials.

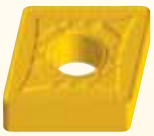
See pages F39–F44 for product listing.

K-Lock™ Inserts

- K-Lock inserts are ideal for deep grooving and profiling.
- A unique insert clamping system allows for unimpeded chip flow.
- Available in moulded and ground peripheries.

See page F59 for product listing.

Negative Inserts



Kenloc™ Inserts

- Kenloc inserts are your first choice for general machining of all materials on medium to large lathes.
- Kenloc inserts offer the best economy for high metal removal rates.
- Available in flat-top and chip-control geometries with both moulded and ground peripheries. Suitable for all workpiece materials.

See pages:
Carbide: B40–B83
Ceramic: B118–B121
Superhard: B187–B197

Kendex Inserts

- Ceramic Kendex inserts are a great choice for productive machining of high-temp alloys.
- Kendex negative rake inserts are also recommended for the machining of hardened materials and cast irons.
- Available in flat-top geometries with moulded and ground peripheries.
- Wide selection of standard toolholders are offered.

See pages B122–B127 for product listing.

Top Notch Turning Inserts

- Ceramic Top Notch Turning inserts are your first choice for high-speed roughing and finishing of cast iron parts.
- Available in flat-top geometries with moulded and ground peripheries.

See pages B122–B127 for product listing.

Insert Selection System

How to Use

Kennametal's three-step insert selection system makes choosing and applying the most productive tool as easy as 1, 2, 3. Tool recommendations are based on six workpiece material groups, optimising selection accuracy.

Example:
Six workpiece material groups

Step 1 • Select the insert geometry

Given: depths of cut = 1mm
feed = 0,4mm
Unknown: insert geometry
Solution: -MN

Step 2 • Select the grade

Given: cutting conditions:
lightly interrupted cut
Geometry: -MN
Unknown: grade
Solution: KCP25

Step 3 • Select the cutting speed

Given: grade KCP25
cutting conditions
material CK15
Unknown: cutting speed
Solution: 280 m/min

Need help in selecting a product?
Additional information can be obtained by contacting Kennametal's Customer Application Support Team.
Go to www.kennametal.com for your country's phone number.

Step 1 • Select the insert geometry

	KCP30/KCP40			◁▷							210	700

New Beyond™ Material Group Selection Guide:
To optimise speed recommendations, Beyond material subgroups have been added to each of the six workpiece material groups.

material	material group ISO code	number of material subgroups
steel	P	1–6
stainless steel	M	1–3
cast iron	K	1–3
non-ferrous materials	N	1–8
high-temp alloys	S	1–4
hardened materials	H	1

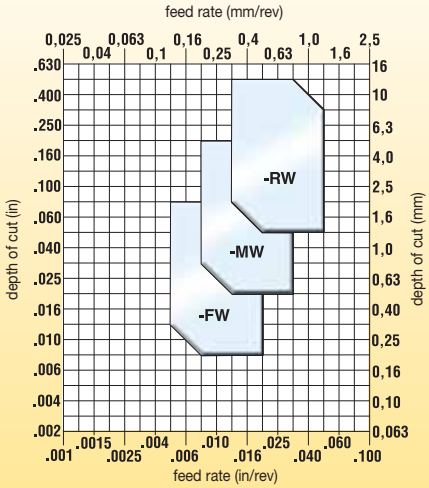
Step 1 • Select the insert geometry

Negative Wiper Inserts

-RW
Rough Wiper

-MW
Medium Wiper

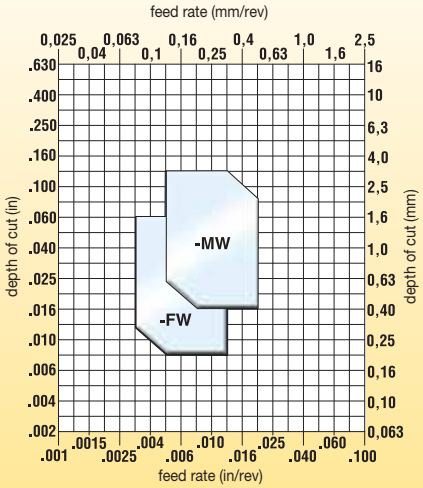
-FW
Finishing Wiper



Positive Wiper Inserts

-MW
Medium Wiper

-FW
Finishing Wiper



Step 2 • Select the grade

cutting condition		Negative Insert Geometry -FW	Negative Insert Geometry -MW	Negative Insert Geometry -RW	Positive Insert Geometry -FW	Positive Insert Geometry -MW
heavily interrupted cut		–	–	KCP25	–	KCP25
lightly interrupted cut		KCP10	KCP25	KCP25	KCP25	KCP25
varying depth of cut, casting, or forging skin		KCP05/KT315	KCP10	KCP10	KCP10/KCK20	KCP10/KCK20
smooth cut, pre-turned surface		KCP05/KT315	KCP05	KCP10	KCP10/KT315	KT315/KT315

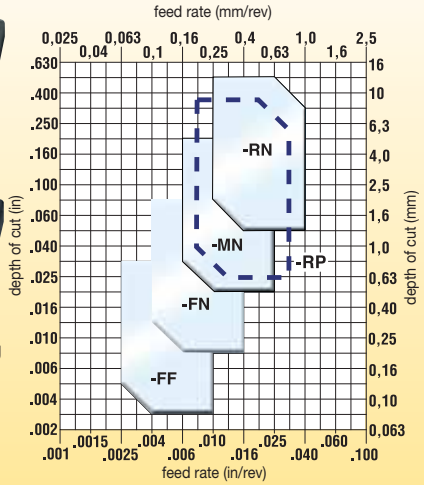
Step 1 • Select the insert geometry

Negative Inserts

-RN -RP* (positive)
Roughing

-FN Finishing
-MN Medium Machining

-FF
Fine Finishing



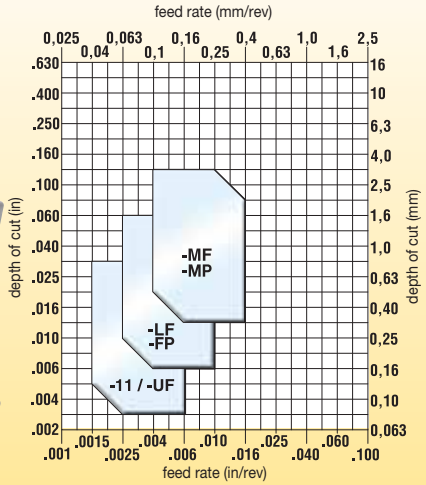
*-RP – Supplemental geometry for high-strength materials

Positive Inserts

-MF -MP Positive
Medium Machining

-LF -FP Positive
Finishing

-11 -UF
Fine Finishing



Step 2 • Select the grade

cutting condition		-FF	-FN	-MN	-RN	-RP	-11	-UF	-LF	-FP	-MF	-MP
heavily interrupted cut		KCP10	KCP25	KCP30	KCP30/KCP40	KCP30/KCP40	—	KC5010/KCP25	KCP25	KCU25/KCP25	KCP40	KCM25
lightly interrupted cut		KCP10	KCP25	KCP25	KCP30/KCP40	KCP30/KCP40	—	KC5010/KCP25	KCP25	KCP25	KCP25	KCP25
varying depth of cut, casting, or forging skin		KCP05/KT315	KCP10	KCP10	KCP30/KCP40	KCP30/KCP40	KT315	KCP10	KCP10	KCP10	KCP10	KCP10
smooth cut, pre-turned surface		KCP05/KT315	KCP05	KCP05	KCP30/KCP40	KCP30/KCP40	KT315	KCP05	KCP05/KT315	KCP05/KTP10	KCP05	KCP05

Step 3 • Select the cutting speed

Low-Carbon (<0,3% C) and Free-Machining Steel — speed — m/min (SFM) — starting conditions

material group	grade	135 (450)	180 (600)	225 (800)	275 (900)	320 (1050)	360 (1200)	410 (1350)	455 (1500)	495 (1650)	m/min	SFM
P0/P1	KCP05/KTP10								◁▷		435	1450
	KCP10							◁▷			395	1320
	KCP25				◁▷						275	925
	KCP30/KCP40		◁▷								210	700
	KT315								◁▷		440	1450
	KCU10/KC5010			◁▷							280	925

Medium- and High-Carbon Steels (>0,3% C) — speed — m/min (SFM) — starting conditions

material group	grade	135 (450)	180 (600)	225 (800)	275 (900)	320 (1050)	360 (1200)	410 (1350)	455 (1500)	495 (1650)	m/min	SFM
P2	KCP05/KTP10				◁▷						240	800
	KCP10			◁▷							265	880
	KCP25			◁▷							195	650

wear resistance ⟷ toughness

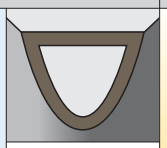
PVD-Coated Carbide Grades

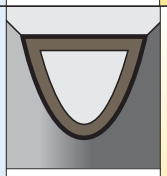
KC5025



C2, C6

Composition: An advanced PVD-AlTiN-coated grade with a tough, ultra-fine-grain unalloyed substrate.
Application: For general-purpose machining of most steels, stainless steels, high-temp alloys, titanium, irons, and non-ferrous materials. Speeds may vary from low to medium and will handle interruptions and high feed rates.

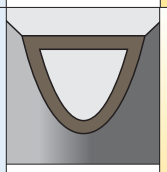
KC5410



C3–C4

Composition: A PVD TiB_2 coating over a very deformation-resistant unalloyed substrate.
Application: Designed for roughing, semi-finishing, and finishing of free machining (hypoeutectic <12,2% Si) aluminium, aluminium alloys, and magnesium alloys. The TiB_2 coating is harder than TiN and TiAlN coatings and has an extremely smooth surface, resulting in reduced surface friction, speedy chip flow, and outstanding wear resistance. Built-up edge is prevented because this coating has a very low affinity for aluminium. The substrate is unalloyed and fine grained and offers sharp edges, smooth surfaces, and excellent thermal deformation resistance and edge integrity. Inserts with a ground periphery are polished before coating and have a sharp edge. Moulded inserts have a light hone.

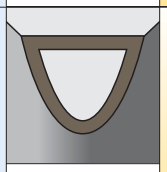
KC5510



C3–C4

Composition: An advanced PVD AlTiN-coated fine-grain tungsten carbide grade.
Application: The KC5510 grade is specifically engineered for the productive machining of high-temp alloys. The fine-grain tungsten carbide 6% cobalt substrate has excellent toughness and deformation resistance while the advanced PVD coating enables metalcutting speeds double those of conventional PVD-coated cutting tools.

KC5525

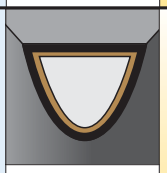


C2–C6

Composition: Advanced PVD AlTiN-coated fine-grain high-cobalt carbide grade.
Application: The KC5525 grade utilises the same advanced PVD coating as the KC5510 grade in conjunction with a fine-grained tungsten carbide 10% cobalt substrate. The higher cobalt enables added security in interrupted cuts while the fine-grained WC maintains hardness-resisting deformation at higher speeds. Designed for medium to heavy interruptions in high-temp alloys.

CVD-Coated Carbide Grades

KCP05

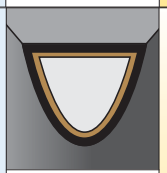


C3–C4

Composition: An innovative, highly deformation-resistant, cobalt-enriched substrate with a specially designed, adherent MTCVD-TiCN-Al_2O_3 coating.
Application: For finishing to semi-finishing of most steels, ferritic, martensitic, and PH stainless steels and cast irons. Provides excellent combination of deformation resistance and insert edge strength. The new coating combined with a state-of-the-art post-coat treatment provides high-productivity with long predictable tool life and superior workpiece surface finish.

beyond

KCP10



C3, C7

Composition: A specially engineered cobalt-enriched carbide grade with thick MTCVD-TiCN-Al_2O_3 coating for maximum wear resistance.
Application: An excellent finishing to medium machining grade for a variety of workpiece materials, including most steels, ferritic, martensitic, and PH stainless steels, and cast irons. The cobalt-enriched substrate offers a balanced combination of deformation resistance and edge toughness, while the thick coating layers offer outstanding abrasion resistance and crater wear resistance for high-speed machining. Smooth coating provides resistance to edge build-up and microchipping and produces excellent surface finishes.

CVD-Coated Carbide Grades

Coating	Grade Description	05 10 15 20 25 30 35 40 45
KCP25  C2–C3, C6–C7	**Composition:** A tough cobalt-enriched carbide grade with a newly designed multilayer MTCVD-TiCN-Al_2O_3 coating with superior interlayer adhesion. **Application:** Best general-purpose turning grade for most steels and ferritic and martensitic stainless steels. The substrate design ensures adequate deformation resistance with excellent insert edge strength. Coating layers offer good wear resistance over a wide range of machining conditions and the post-coat treatment minimises microchipping and improves coating adhesion to substrate leading to long tool life and improved workpiece finishes. beyond	KCP30  C5–C6	**Composition:** A newly engineered, tough cobalt-enriched carbide grade with an advanced multilayer TiN-MT-TiCN-Al_2O_3 coating. **Application:** For medium to rough machining of all carbon, alloy, and stainless steels. The substrate design provides superior insert strength that is required for this application, and the multilayer coating adds wear resistance to the insert resulting in long tool life. beyond	KCP40  C5–C6	**Composition:** A tough carbide grade with a moderately thick TiN-MT-TiCN-Al_2O_3 coating. **Application:** For heavy roughing of carbon, alloy, and stainless steels. The substrate-coating combination provides unbelievable toughness and operational security allowing high metal removal rates even in most demanding interrupted cuts. beyond	KCK05  C3–C4	**Composition:** A multilayered coating with moderately thick MTCVD TiCN-Al_2O_3 layers over a highly deformation-resistant carbide substrate. **Application:** Designed for high-speed machining of grey and ductile irons. The substrate and coating architecture together with CW5 post-coat treatment ensure a tremendous tool life advantage, especially when cutting higher tensile strength ductile and grey irons where workpiece size consistency and reliability of tool life are critical. Excellent both in straight and varied depths of cut. beyond	KCK15  C3–C4	**Composition:** A multilayered coating with thick MTCVD TiCN-Al_2O_3 layers applied over a carbide substrate specifically engineered for cast irons. **Application:** Delivers consistent performance in high-speed machining of grey and ductile irons. The substrate design permits the insert to stay in the cut for a long time at high speeds with minimum deformation. The thick CVD coating and post-coat treatment provide superior wear resistance ensuring long and consistent tool life. Can be applied both in straight and lightly interrupted cuts. beyond	KCK20  C2–C3	**Composition:** A specially toughened MTCVD-TiCN-Al_2O_3 coating over a wear-resistant substrate. **Application:** The KCK20 grade is specifically engineered to maximise coating adhesion and edge strength making this grade ideal in wet interrupted cutting of grey and ductile irons. It can be used in a wide range of applications from finishing to roughing to maximise productivity wherever strength and reliability are needed. beyond	

Coatings provide high-speed capability and are engineered for finishing to heavy roughing.

wear resistance ⟷ toughness

	Coating	Grade Description	05	10	15	20	25	30	35	40	45
CVD-Coated Carbide Grades	KCM15 C2–C3	**Composition:** A multilayer MTCVD-TiCN-Al_2O_3 coated carbide grade. **Application:** An excellent finishing to medium machining grade for austenitic stainless steels at higher speeds and covers a broad range of steel applications in the P20–25 range. KCM15 grade in combination with unique geometries have been designed to resist depth-of-cut notching and minimise burr formation. The post-coat treatment reduces coating stresses, improves coating adhesion, minimises microchipping and edge build-up, and improves workpiece finish. beyond	P			■	■	■				
			M		■	■	■					
	KCM25 C1–C2	**Composition:** A multilayer CVD coating comprised of TiN-MT-TiCN-Al_2O_3 layers over a tough, cobalt-enriched carbide substrate. **Application:** This CVD-coated grade is designed for general-purpose machining of austenitic stainless steels at moderate speeds and feeds. KCM25 inserts offer an extraordinary combination of toughness, built-up edge resistance, and wear resistance in stainless steel applications. beyond	P				■	■	■			
			M			■	■	■				
	KCM35 C1–C2	**Composition:** A multilayer TiN-MT-TiCN-Al_2O_3 CVD coating over a super-tough substrate. **Application:** The KCM35 grade is engineered to take on the most brutal cast stainless steel machining applications. The substrate withstands heavy interruptions, while the coating provides the wear resistance needed for long tool life. The polished surface resists edge build-up, even at slow cutting speeds. KCM35 grade is available in insert sizes and geometries appropriate for heavy feeds and large depths of cut. beyond	P						■	■	■	
			M					■	■	■		
PVD-Coated Cermet Grades	KT315 C3, C7	**Composition:** A multilayer PVD-TiN/TiCN/TiN-coated cermet turning grade. **Application:** Ideal for high-speed finishing to medium machining of most carbon and alloy steels and stainless steels. Performs very well in cast and ductile iron applications, too. Provides long and consistent tool life and will produce excellent workpiece finishes.	P	■	■							
			M		■	■						
			K		■	■

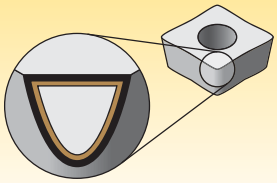
Ceramic Grades

Coating	Grade Description	05	10	15	20	25	30	35	40	45
KYS25  C4	**Composition:** SiAlON ceramic with a multi-layered alumina-TiCN CVD coating. **Application:** Compliments the KYS30 grade when machining high-temp and nickel-based alloys and cast materials with high Brinell hardness. This advanced CVD coating provides excellent chemical and depth-of-cut notch resistance compared to whisker ceramics. beyond									
KYS30  C4	**Composition:** Latest and most advanced sialon material developed. **Application:** Combines excellent wear properties, fracture toughness, and thermal shock resistance for general-purpose to finish machining of high-temp alloys. Provides superior depth-of-cut notch resistance compared to whisker ceramics. beyond									
KYK10  —	**Composition:** An advanced sialon ceramic grade. **Application:** Provides maximum wear resistance. Use for high-speed continuous turning of grey cast iron, including through scale. beyond									
KYK25  C3	**Composition:** Pure silicon nitride ceramic with an alumina CVD coating. **Application:** Excellent combination of toughness and edge wear resistance. Used for general-purpose machining of grey, ductile, or nodular cast irons. beyond									



Coatings provide high-speed capability and are engineered for finishing to heavy roughing.

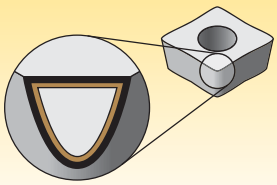
Ceramic Grades

Coating	Grade	Grade Description	05	10	15	20	25	30	35	40	45
 C4	KY4300	**Composition:** Whisker ceramic with a matrix of Al_2O_3 + SiCW. **Application:** The SiC whiskers embedded in the micro structure give this ceramic excellent toughness for cutting high-temp alloys and cast materials with high Brinell hardness.									
 C2	KY3500	**Composition:** Pure silicon nitride grade. **Application:** Maximum toughness. Used at high feed rates for rough machining of grey cast iron, including machining through interruptions.									
 C4, C8	KY4400	**Composition:** A PVD TiN coating over an aluminium oxide and titanium carbonitride composite ceramic (Al_2O_3/TiCN). **Application:** Used for finish turning of hardened steels and irons (greater than 45 HRC). Where possible, use under dry conditions in smooth or varied depths of cut. Can also be applied in finish turning of nickel alloys, cobalt alloys, and powder metals.									

PCBN – Polycrystalline Cubic Born Nitride Grades

Coating	Grade	Grade Description	05	10	15	20	25	30	35	40	45
 —	KB1340	**Composition:** A high CBN content, solid PCBN insert having multiple cutting edges. **Application:** Applied in roughing to finishing of fully pearlitic grey cast iron, chilled irons, high-chrome alloyed steels, sintered powdered metals, and heavy cuts in hardened steels (>45 HRC). Also use for finishing chilled cast iron and fully pearlitic cast iron. The solid PCBN insert offers better security and shock resistance compared to tipped PCBN inserts, while also enabling deeper depth-of-cut capabilities.									
 —	KB1345	**Composition:** A high CBN content, PCBN tip brazed onto a carbide insert. **Application:** Applied in roughing to finishing of fully pearlitic grey cast iron, chilled irons, high-chrome alloyed steels, sintered powdered metals, and heavy cuts in hardened steels (>45 HRC). Also use for finishing chilled cast iron and fully pearlitic cast iron. The tipped PCBN insert is available in a wide range of insert styles including positive rake geometries that are ideally suited for boring applications.									
 —	KB1610	**Composition:** A low CBN content, PCBN tip brazed onto a carbide insert. **Application:** Designed for precision finishing in smooth cuts on hardened steels (>45 HRC) where optimal surface finish is needed. Use on bearing steel, hot and cold work tool steels, high-speed steels, die steels, case hardened steels, carburised and nitrided irons, and some hard coatings. Do not apply on soft steel.									



Coatings provide high-speed capability and are engineered for finishing to heavy roughing.

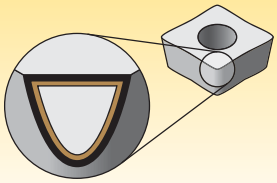
wear resistance ⟷ toughness

PCBN – Polycrystalline Cubic Born Nitride Grades

Coating	Grade Description	05	10	15	20	25	30	35	40	45
KB1625  —	**Composition:** A medium CBN content, PCBN tip brazed onto a carbide insert. **Application:** Designed for roughing to finishing of hardened steels (>45 HRC) where optimal surface finish is needed. It can be used in continuous to interrupted cutting of bearing steel, hot and cold work tool steels, high-speed steels, die steels, case-hardened steels, carburised and nitrided irons, and some hard coatings.									
KB1630  —	**Composition:** A high CBN content, PCBN tip brazed onto a carbide insert. **Application:** Designed for roughing to finishing in interrupted cuts on hardened steels (>45 HRC). It can also be applied on grey cast iron, chilled irons, high-chrome alloyed steels, and sintered powdered metals. The tipped PCBN insert is available in a wide range of insert styles, including positive rake geometries, that are ideally suited for boring applications.									
KB5610  C4, C8	**Composition:** A low content PCBN grade with a PVD TiAlN coating for added wear resistance. **Application:** Designed for the precision machining of hardened steels (>45 HRC). The PVD coating offers improved wear resistance and excellent surface finish capabilities. It can be very effectively applied on bearing steels, hot and cold work tool steels, high-speed steels, die steels, case-hardened steels, carburised and nitrided irons, and some hard coatings. Available in a multitip format with a tremendous breadth of edge preps, insert styles, and wiper geometries.									
KB5625  C4, C8	**Composition:** A PVD TiAlN coating over a medium content, PCBN tip brazed onto a carbide insert. **Application:** Designed for roughing to finishing of hardened steels (>45 HRC). Use on bearing steel, hot and cold work tool steels, high-speed steels, die steels, case-hardened steels, carburised and nitrided irons, and some hard coatings.									
KB5630  C4, C8	**Composition:** A high content PCBN grade with a PVD AlTiN coating for added wear resistance. **Application:** Designed for roughing to finishing in hardened steels (>45 HRC), abrasive workpiece materials such as sintered valve seat materials, powder metallurgy tool steels, and hard high-alloy cast irons. The PVD coating provides resistance to crater wear and increased resistance to chipping. The tipped PCBN insert is available in a wide range of insert styles, including positive rake geometries, that are ideally suited for boring applications.									



Coatings provide high-speed capability and are engineered for finishing to heavy roughing.

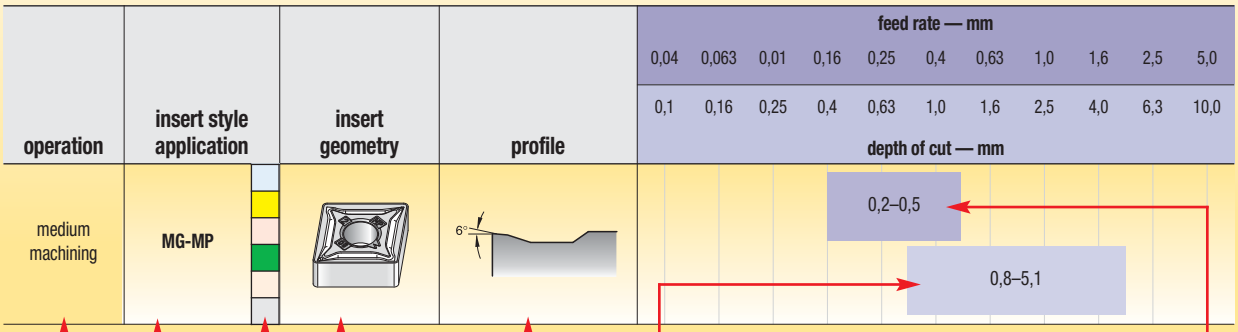
PCD – Polycrystalline Diamond Grades

Coating	Grade Description	05	10	15	20	25	30	35	40	45
KD1400 	**Composition:** An ultra-fine-grain, polycrystalline diamond (PCD) tip brazed onto a carbide substrate. **Application:** Designed for general-purpose turning of primarily non-ferrous materials. It can be applied over a wide range of continuous to interrupted cuts where superior surface finish is needed. Use on low to medium silicon-content aluminium alloys, non-metallics, copper, and brass- and zinc-based alloys. The ultra-fine-grain diamond particle size enables superior surface finishes while ensuring the best mechanical shock resistance of any PCD cutting tool.									
KD1405 	**Composition:** A pure CVD-deposited diamond-sheet tool brazed directly to a carbide substrate. **Application:** KD1405 is Kennametal's most abrasion-resistant tool material for non-ferrous and non-metallic materials. Best applied when abrasion resistance is the desired benefit.									
KD1425 	**Composition:** A multimodal PCD grade with a range of grain sizes brazed onto a carbide substrate. **Application:** Engineered for extreme abrasion resistance, combined with good edge strength for demanding applications. An ideal choice for high-silicon aluminium alloys, bi-metallic (AL/GCI) materials, MMC, carbon-fibre reinforced plastics, and other abrasive non-metallic materials.									

Select the geometry — based on feed rate and depth of cut

P	Steel
M	Stainless Steel
K	Cast Iron
N	Non-Ferrous Materials
S	High-Temp Alloys
H	Hardened Materials



Feed Rate Range —
for best results, use the centre 60% of the range

Depth-of-Cut Range —
for all inserts in the program, select smaller inserts for lighter cuts and larger inserts for heavy cuts

Pictorial View of Insert

Carbide Inserts

Primary Application

Kennametal offers a complete portfolio of ISO-/ANSI-style inserts. Positive, negative, CVD, PVD, or uncoated, we have the insert to help increase productivity and achieve greater savings.

Plus, our carbide insert line contains Beyond™ technology. Beyond inserts offer you greater versatility, reliability, and up to 30% higher productivity.

Beyond™ CVD Grades

- Higher productivity and profitability — up to 300% higher.
- Lower cutting forces — Increase speeds and reduce cycle time.
- Extended tool life.
- Predictable tool life / Uniform wear.
- Resists chip flow damage.
- Consistent surface finish.
- Products can be applied across a wide range of applications.
- Use it in low speed to high speed applications.
- For finish to rough turning of steel, cast iron, stainless steel, and high temp alloy turning.

Beyond™ PVD Grades

KCU10™

- PVD-coated grade with superior wear resistance at elevated temperatures, allowing higher metal cutting speeds.
- For use in all materials, especially stainless steels and high-temp alloys.
- Improved depth-of-cut notch resistance.
- Increase speed by 20–30% or feed by 10–15%.
- Use in finishing to medium applications.

KCU25™

- PVD-coated grade with superior edge toughness and excellent wear resistance. Medium to roughing applications.
- Use in all materials.
- Increase speed, feed, and depth of cut by 10–20%.

Ceramic Inserts

Primary Application

Kennametal's advanced materials, utilising Beyond™ technology, offer greater wear resistance and toughness, depending on the job.

KYK ceramic inserts are the first choice for high speed, continuous, and lightly interrupted turning applications in cast iron materials. Benefits include improved fracture toughness, better wear resistance, and extended application range. Combining KYK10™ and CVD-coated KYK25™ with our other ceramic grades for cast iron, Kennametal provides a complete, high-performance ceramic portfolio that can reduce machining cycle times and lower manufacturing costs.

KYS ceramic inserts are the first choice for high-speed applications in high-temp alloys. The multilayer coating offers enhanced chemical wear resistance versus uncoated grades. A superior sialon ceramic substrate provides excellent depth of cut notching resistance versus whisker-reinforced ceramics.

Features and Benefits

KYK10

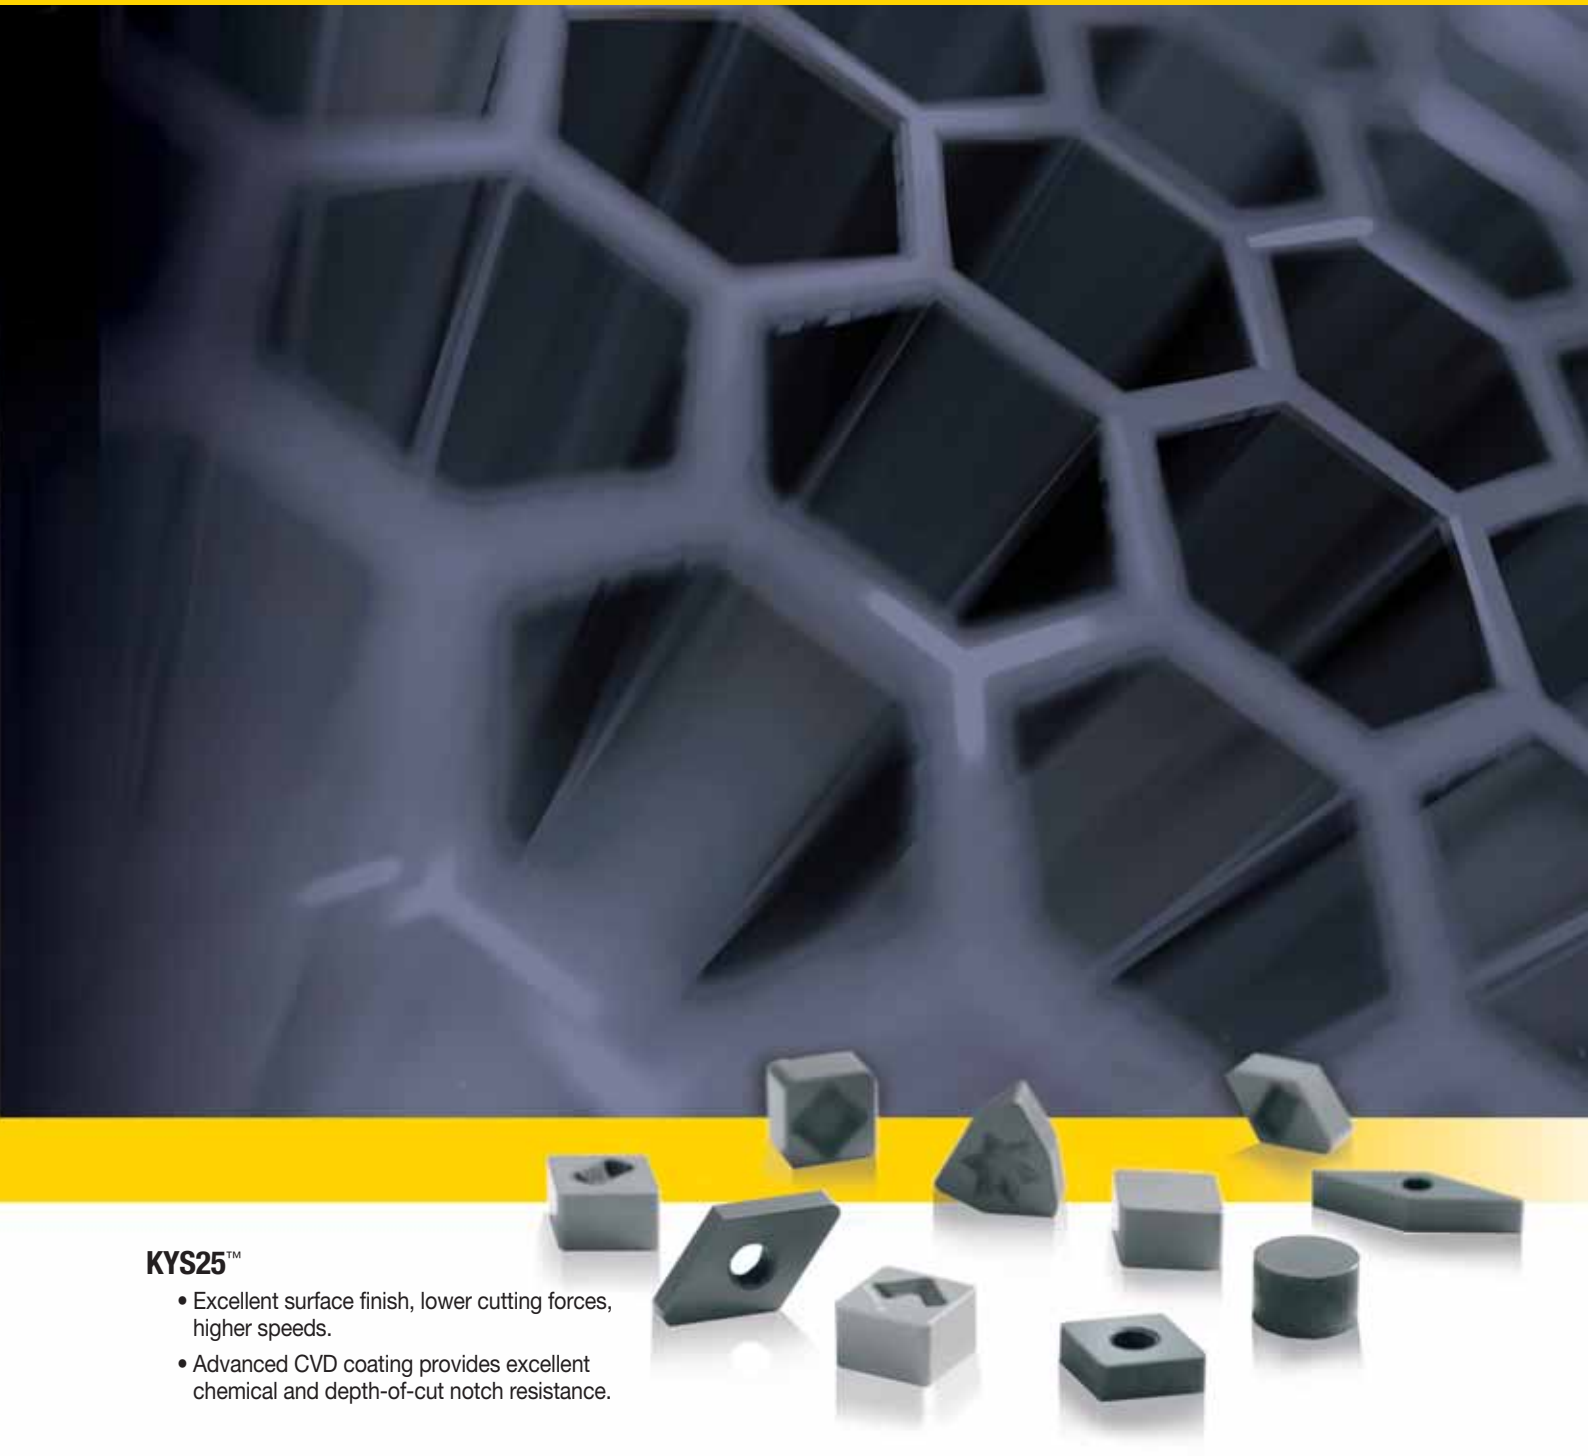
- Improved wear resistance and toughness with 20% longer tool life than current KY1310™.
- Best suited for continuous turning of cast iron materials and in lightly interrupted cuts.
- Available in Kenloc,™ Kendex,™ and Top Notch™ turning insert styles.

KYK25

- 12 micron thick coating provides excellent wear resistance and pre-coat treatment allows for very consistent tool life and performance in cast iron applications.
- Up to 30% longer tool life vs. competitors' CVD-coated ceramic grades.
- Available in Kenloc, Kendex, and Top Notch turning insert styles.

KY3500™

- The industry standard for high-speed turning.
- Excellent for roughing to finishing operations in wet or dry cuts with speeds up to 1.040 m/min.
- Performs well in difficult interrupted cuts in ductile or malleable cast iron (<70 KSI tensile strength) at speeds of 275–500 m/min.



KYS25™

- Excellent surface finish, lower cutting forces, higher speeds.
- Advanced CVD coating provides excellent chemical and depth-of-cut notch resistance.

KYS30™

- Long, consistent tool life.
- Excellent toughness and depth-of-cut notch resistance.
- Performs in a wide variety of machining conditions, including interrupted cuts and applications involving scale.

Beyond™ ISO Ceramic Insert Expansion

KYK10™, KYK25™, KYS25™, and KYS30™

The new Beyond ISO KYK Ceramic Inserts are the first choice for high speed, continuous, and lightly interrupted turning applications in grey cast iron. These premium ceramic solutions for continuous cast iron turning applications offer improved fracture toughness, better wear resistance, and extended application range. By combining KYK10 and CVD-coated KYK25 with Kennametal's other ceramic grades for cast iron materials, Kennametal provides a complete, high-performance ceramic portfolio that can be optimised to reduce machining cycle times and lower overall manufacturing costs.

KYK10:
- Best suited for continuous turning of cast iron materials and in lightly interrupted cuts.

KYK25:
- Excellent wear resistance and pre-coat treatment allows for very consistent tool life and performance in a multitude of cast iron applications.

KYS25:
- Excellent surface finish, lower cutting forces, higher speeds.

KYS30:
- Excellent toughness and depth-of-cut notch resistance.

Experience the advantages at your Authorised Kennametal Distributor or at **www.kennametal.com**.

Superhard Materials • PCBN and PCD

Superhard Tool Materials **B133–B173**

Application Areas B134–B135

PCBN B137–B163

PCD B165–B173

Superhard Inserts **B174–B197**

Properties of PCD and PCBN cutting tool materials

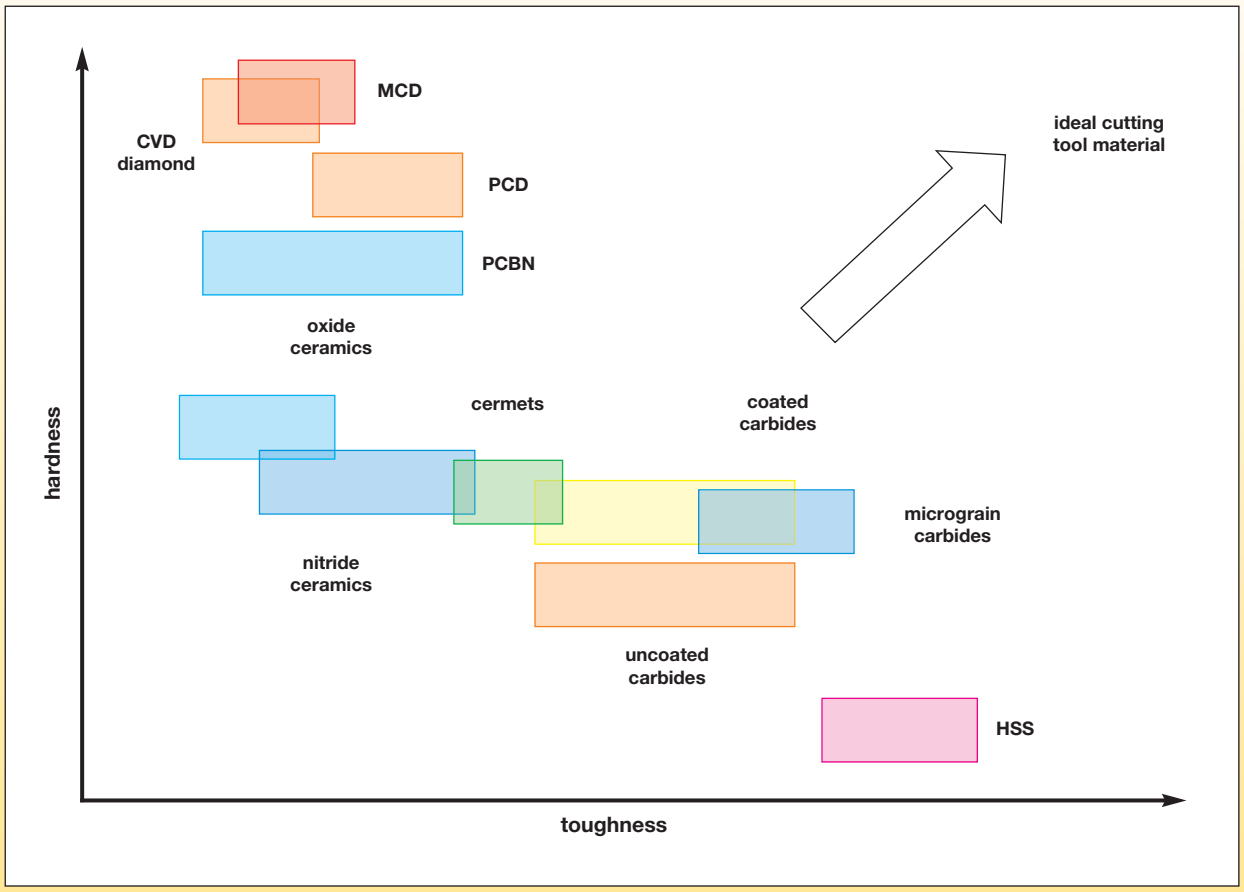
The current global metalcutting climate has put increased focus on high productivity and cost reductions coming from cutting tools. These requirements lead to the rapid growth and implementation of cutting tools using superhard materials. As the name implies, these materials have a significant advantage in hardness over conventional tool materials, which from the end user point of view, translates into increased productivity (higher cutting speeds, longer tool life, etc.), lower tooling cost per part, and also, the ability to process materials previously un-machinable with conventional tooling.

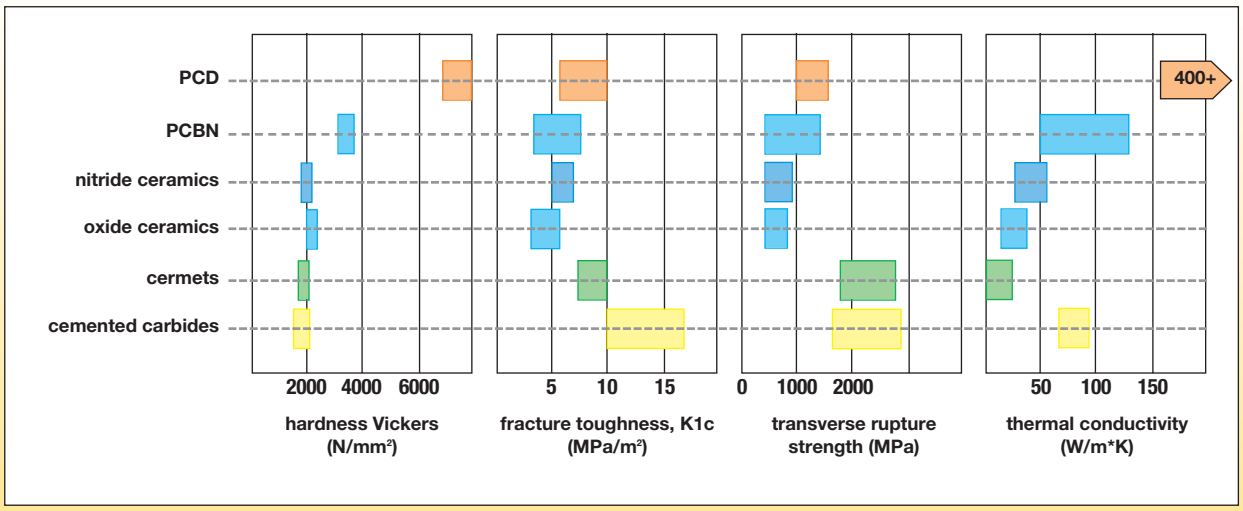
The most widely known superhard materials are diamond and cubic boron nitride. Our industry uses the polycrystalline forms of these materials, i.e., polycrystalline diamond (PCD) and polycrystalline boron nitride (PCBN). PCD tooling is mainly targeted at the machining of non-ferrous materials (e.g., aluminum alloys, plastics, CFRPs, composites, titanium alloys, ceramics, carbides, etc.) whereas PCBN targets iron-based alloys (e.g., cast irons, hard steels, iron-based composites, etc.)

Kennametal is at the forefront of developing and implementing superhard materials in our standard and special tooling solutions across all our product lines. Kennametal's approach to superhard tooling starts with customer needs and constraints. We then use fundamental research to develop the best superhard solutions that would make available the best value for the customer and respond to their specific demands.

Where to use PCD and PCBN

Diamond and cubic boron nitride (CBN) are the most commonly known superhard materials.
For cutting tools, they are used in their polycrystalline form, i.e., PCD and PCBN.





Choosing between PCD and PCBN

It is primarily their thermochemical stability that determines the suitability of the two materials for specific areas of application. For standard PCD, this means that it is restricted to workpiece materials where the cutting temperature does not exceed 700 °C and has no affinity with carbon if diffusion wear of the cutting edge is to be avoided at elevated temperatures. Operations that satisfy these conditions are, for example, the machining of non-ferrous metals, wood, plastics, and minerals where PCD mainly competes against tungsten carbide and, to some extent, high-speed steel.

By contrast, PCBN is thermally stable up to approximately 1200 °C and has high resistance to chemical attack. As a result, extreme temperatures, such as occur when machining hard ferrous metals, do not pose difficulties and can be used to promote self-induced hot cutting. Therefore, technical and economic benefits can be achieved, particularly in comparison with grinding, and in most cases, performance is significantly better than that attainable with conventional tool materials, such as tungsten carbides and ceramics.

There are limitations for PCBN, however, in the machining of austenitic steels and ferritic cast irons, where more reactive phases result in increased PCBN edge wear.

PCBN

Increased productivity can be achieved with PCBN tools through:

- Higher cutting speeds.
- Higher feed rates.
- Longer tool life.
- Less machine downtime.

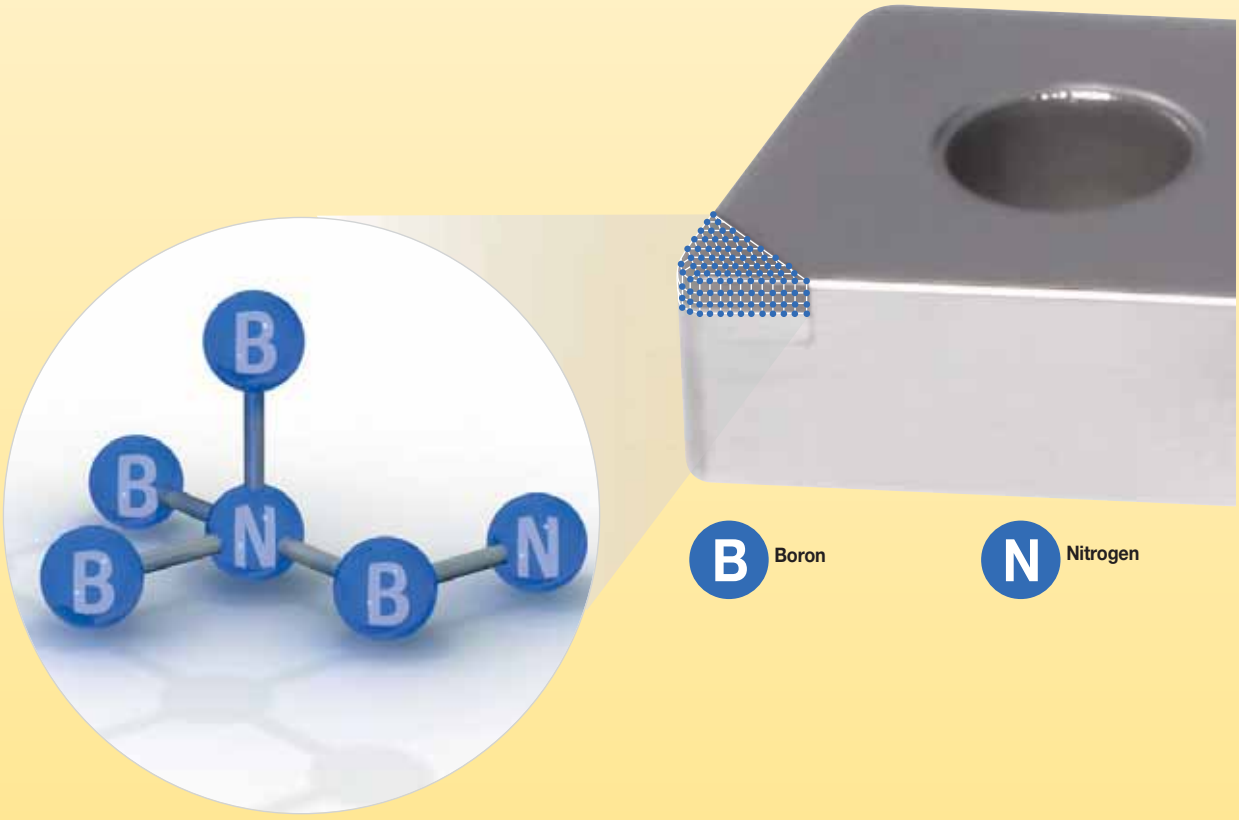
- More parts per machine means direct tool costs can be reduced.

- Very tight workpiece surface finish tolerances can be achieved on difficult-to-machine materials.

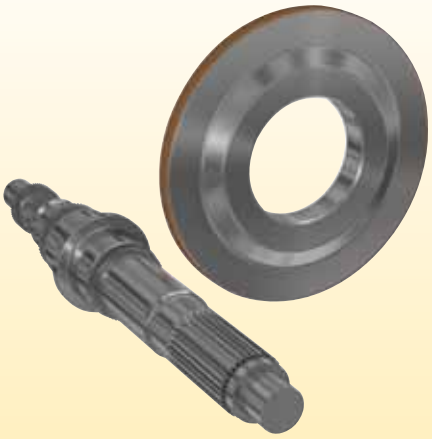
- PCBN can be used to machine ferrous materials in the hardened condition as an alternative to grinding, making it possible to substantially reduce component machining times.

- PCBN offers environmental benefits — the generation of grinding sludge is eliminated and the chips can be recycled.

- Improved surface integrity of critical components.



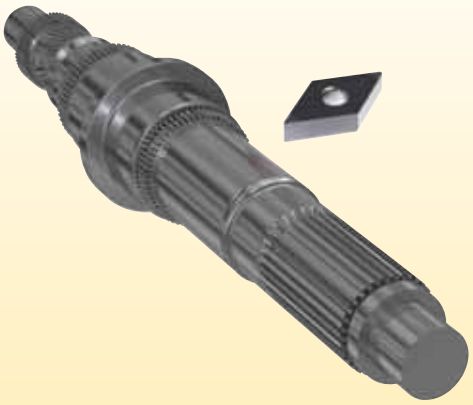
Grinding vs. Hard Turning



Grinding

- Size tolerance specifications beyond the capability of turning.
- Surface finish requirements too tight for hard turning.

vs.



Hard Turning

- Size tolerance specifications beyond the capability of turning.
- Complex geometry that makes single-point turning more practical.
- Relatively high metal removal rates.
- Dry machining.
- Faster machine setup.
- Faster cycle times.
- I.D. and O.D. machining on one machine.

Where does PCBN work?

PCBN is suitable for machining a wide variety of workpiece materials, mainly ferrous alloys.

The application areas may be broadly categorised as follows:

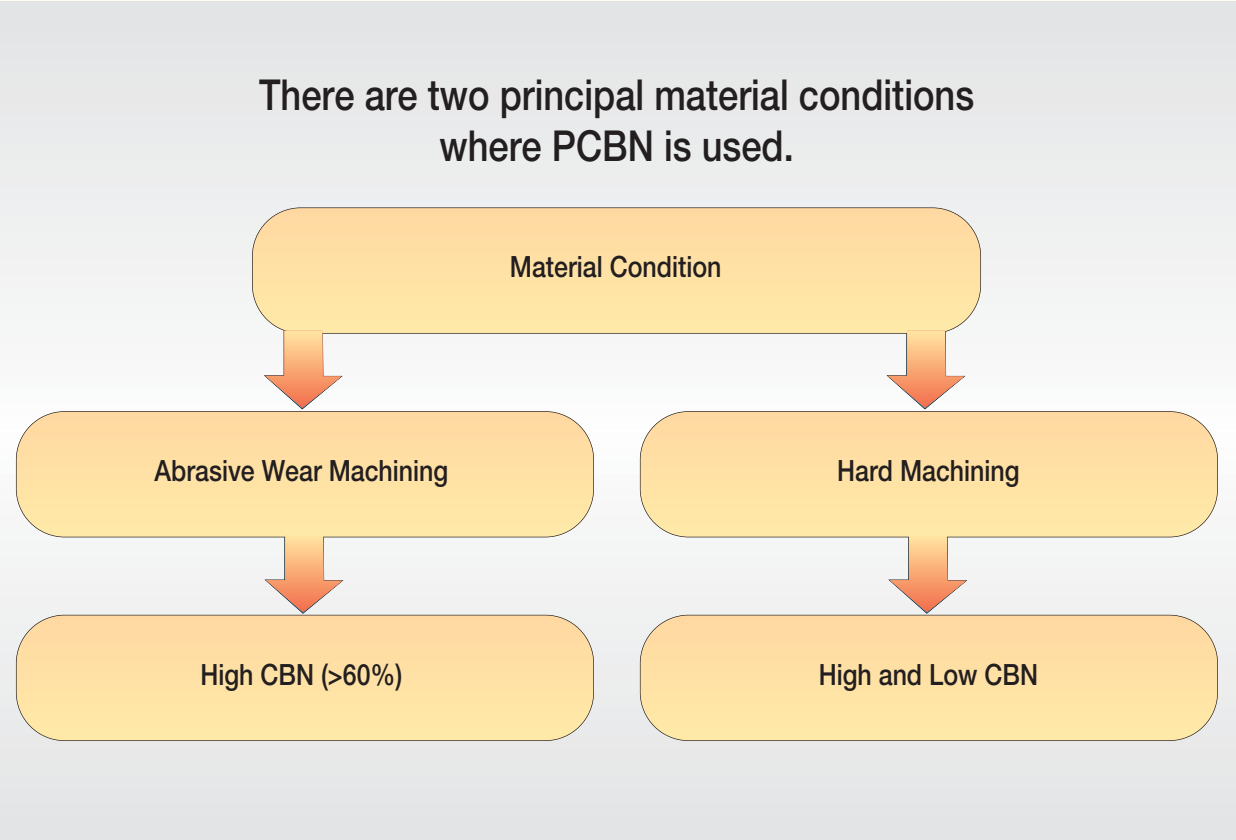
Hardened Steels	Cast Irons	Superalloys	Powder Metallurgy Steels

Certain classes of PCBN materials are associated with each particular application.

For best cost performance, proper selection of the following is essential:

- Format of the insert.
- Grade.
- Edge prep.
- Application data.

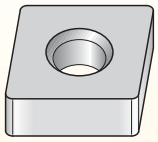
PCBN is known as the second hardest material



PCBN insert formats

Solid Inserts

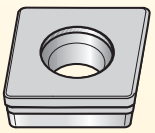
- Inserts are made only from PCBN.
- No material joint.
- Best heat absorption capacity.
- Can work at highest temperatures.



solid

Full-Face Inserts

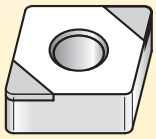
- Inserts are made from a presintered carbide/PCD or PCBN joint.
- Elimination of the brazing joint. Less delamination.
- Better heat absorption capacity.
- Can work at higher temperatures than tipped tools.
- Facilitate larger depth of cut compared to the same size tipped insert.
- The blanks are available with “A” and “W” ISO-style pin-lock holes.



full-face

Tipped Inserts

- Require a carrier and substrate for the insert.
- The tips are brazed to the substrate. Various brazing methods are applied.
- The substrate has to have a pocket that will accommodate and support the tip.
- In these types of tools, the braze joint represents the weak link, so the brazing operation is very important and should be carefully controlled and executed.
- The main advantage of tipped tools over full-faced inserts is the lower cost.



tipped

Kennametal inserts

This table shows approximate tip sizes of Kennametal CBN inserts depending on style and corner radius. Please note that the maximum cutting depth is not more than 80% of the tip length.

radius	insert shape				
	S	C, W	T	D, K	V
R 0,2mm					R 0,4mm					R 0,8mm					R 1,2mm					
R 1,6mm					

PCBN portfolio

Grade	KB5610 (KB1610)	KB5625 (KB1625)	KB5630 (KB1630)	KB1340	Grade

PCBN Hard Turning Selection System

Introduction

This guide will help you choose the PCBN grade, edge preparations, nose radius, feed, and recommended speed range for your hard turning applications. These recommendations will establish a starting point for optimisation of the application. Where possible, this guide will lead you to standard line items. If this is not the case, the items can still be obtained through the QTSP (Quick-Turn Solutions Program) or ordered as specials.

We will classify hard turning operations as any turning or boring of ferrous-based workpiece materials with a hardness (HRC) higher than 45. For workpieces with lower hardness values, PCBN is not recommended.

To use the guide, you will need this application information:

- Workpiece design: interruptions, shape, and frequency.
- Workpiece material specifications: hardness, superficial or through treatment, and carbide forming alloying elements (that increase the abrasivity of the material).
- Depth of cut.
- Surface finish requirements.
- Preset conditions, such as specific nose radius, limited feed, etc.
- Setup limitations related to machine tool, fixturing, etc.
- Tool life criteria, e.g., surface finish, dimensional tolerance, cutting force, etc.

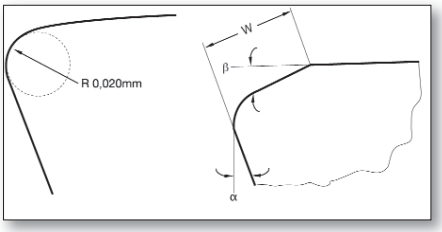
PCBN Hard Turning • Selection System Overview

Step 1 • Choosing the PCBN Grade

Step 1, reference page B144–B145.

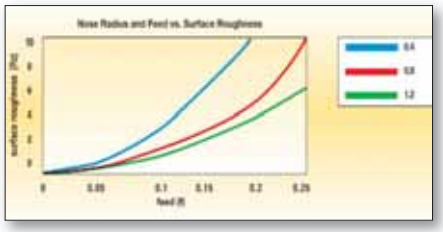
Step 2 • PCBN Edge Preparation Features

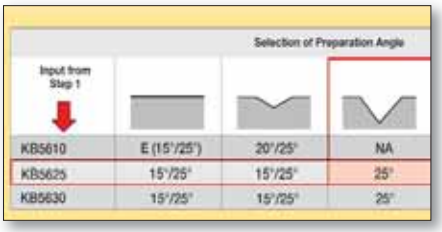
Edge Preparation Specifications		
E	Hone Only	0,020mm
S01015	W x β = 0,1mm x 15°	
S01025	W x β = 0,1mm x 25°	



Step 2, reference page B145.

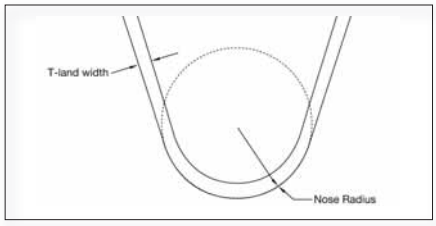
Step 3 • Selection of T-Land Angle

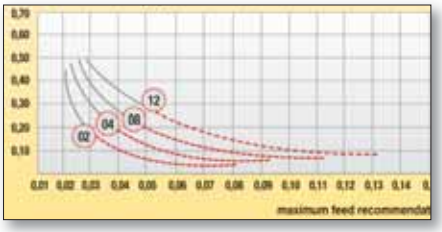




Step 3, reference page B145.

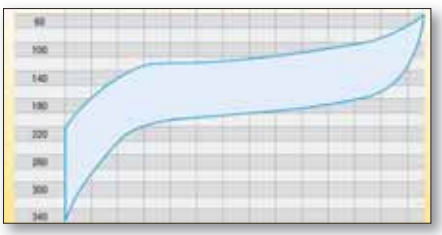
Step 4 • Selection of T-Land Width





Step 4, reference page B146.

Step 5 • Choosing the Speed Range



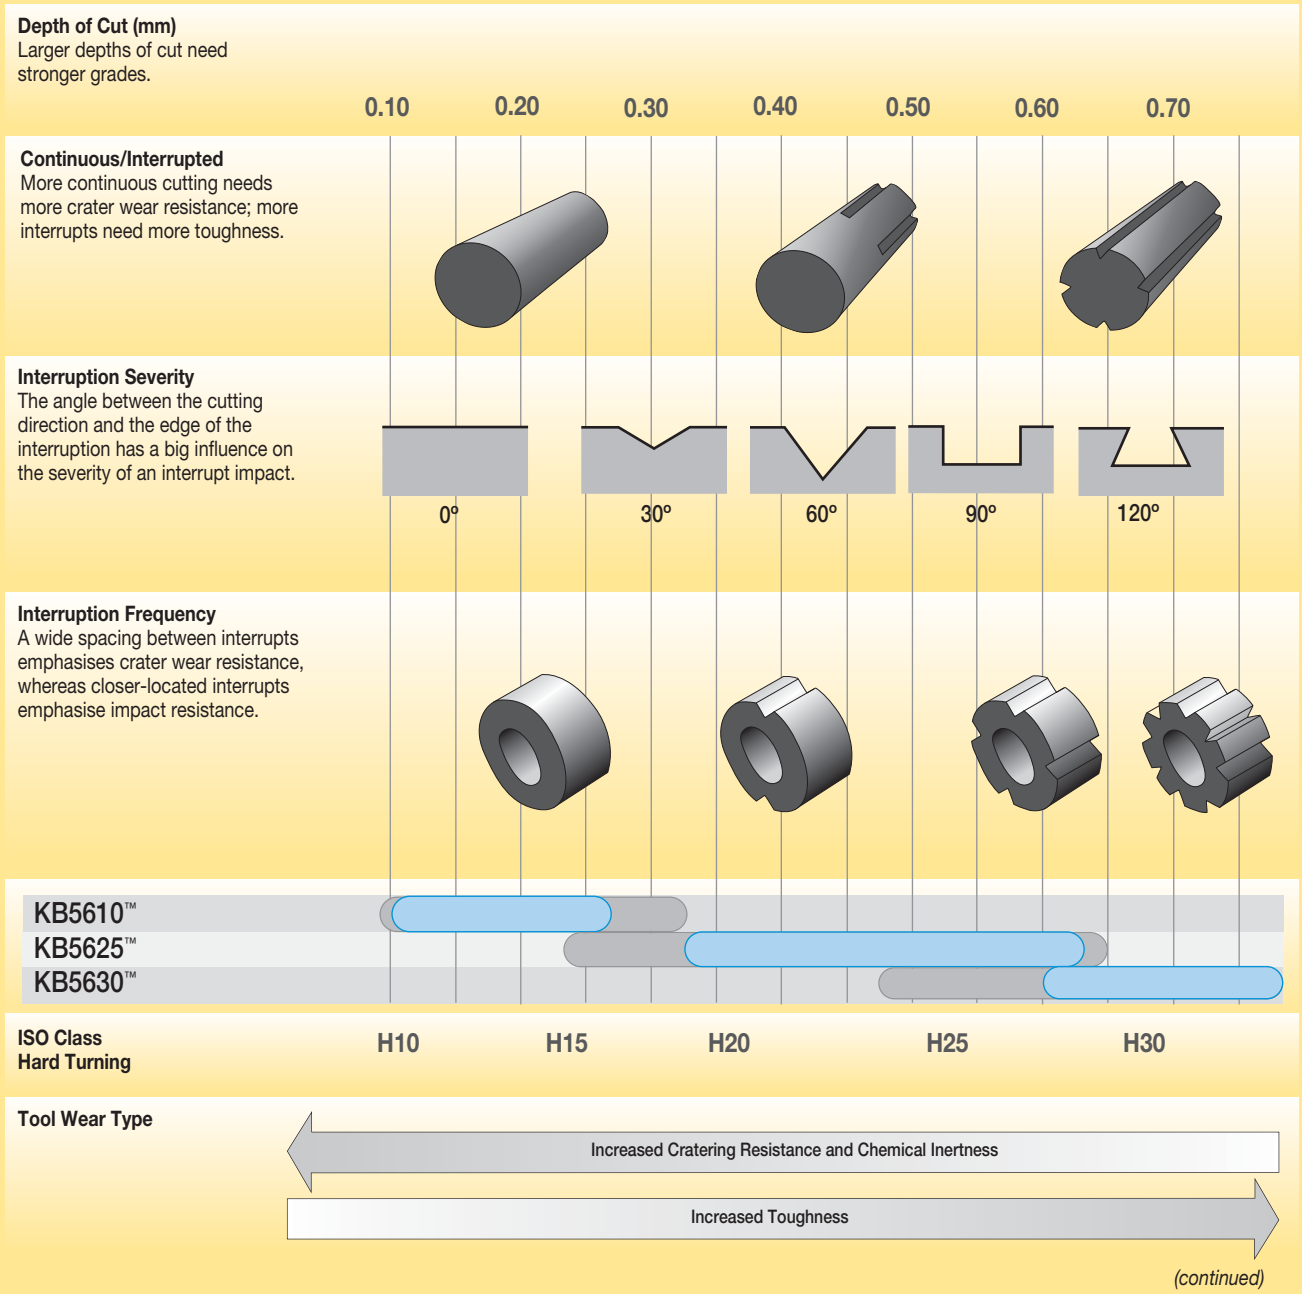
Step 5, reference page B147.

Grade Selection for Hard Turning

How to Use

Identify your application conditions. The most far right parameter will then determine the recommended grade(s). If more than one grade is intersected, it is recommended to first select the grade with the highest toughness (page B139) before optimising using the Troubleshooting Guide (pages B142–B143).

Step 1 • Choosing the PCBN grade



(continued)

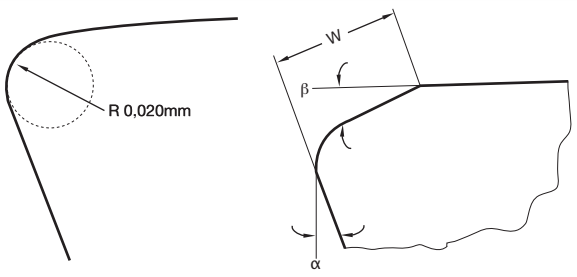
Step 1 • Choosing the PCBN grade *(continued)*

	cratering resistance	abrasive resistance	impact resistance	surface finish
KB5610™	***	*	*	***
KB5625™	**	**	**	**
KB5630™	*	***	***	**

*** = Best

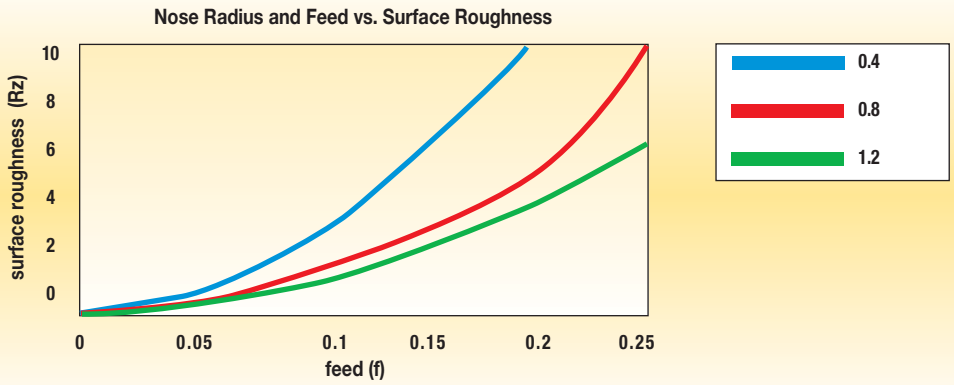
Step 2 • PCBN edge preparation features

Edge Preparation Specifications		
E	hone only	0,020mm
S01015	W x β = 0,1mm x 15°	
S01025	W x β = 0,1mm x 25°	



W – Edge Prep Width
α – Clearance Angle

β – T-Land Angle



Step 3 • Selection of T-land angle

How to Use

Using the grade selection and the Interruption Severity from **Step 1**, select edge preparation angle or hone only, E, from the table **below**. Solutions in parenthesis are second options.

Selection of Preparation Angle					
input from Step 1 ↓					KB5610	E (15°/25°)	20°/25°	NA	NA	NA
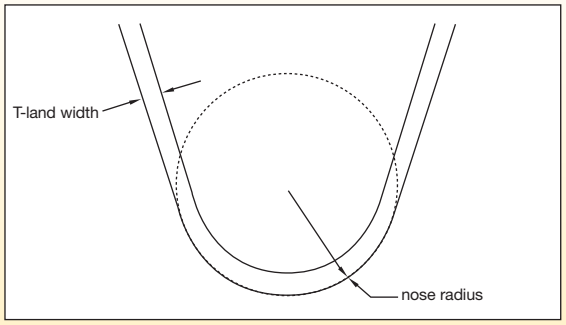
KB5625	15°/25°	15°/25°	20°/25°	25°	NA
KB5630	15°/25°	15°/25°	20°/25°	25°	25°/35°

Step 4 • Selection of T-land width

How to Use

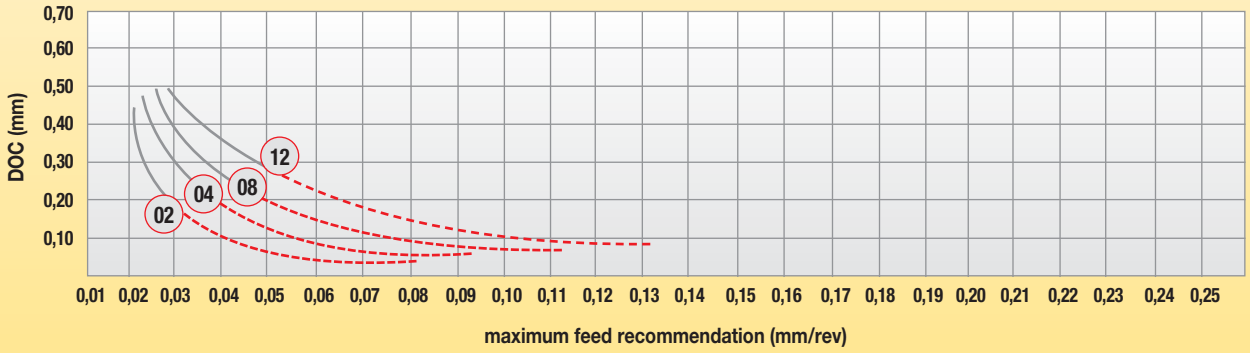
Example 1: If the feed, depth of cut, and the tool nose radius are fixed, use these values to see what T-land width should be used.

Example 2: If you want to use a specific T-land width or hone only edge, use the chart below to see what maximum feeds and depths of cut are recommended for different nose radii.



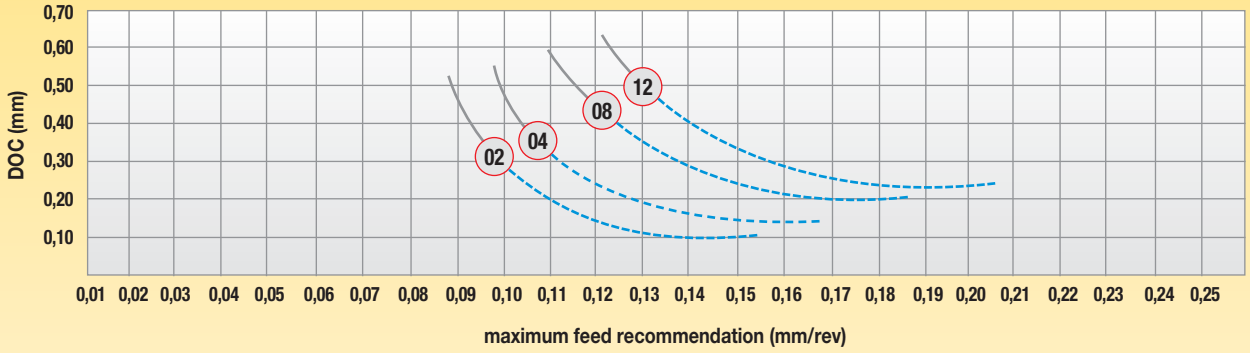
T-Land Width (W): E

Number in circle is NOSE RADIUS*



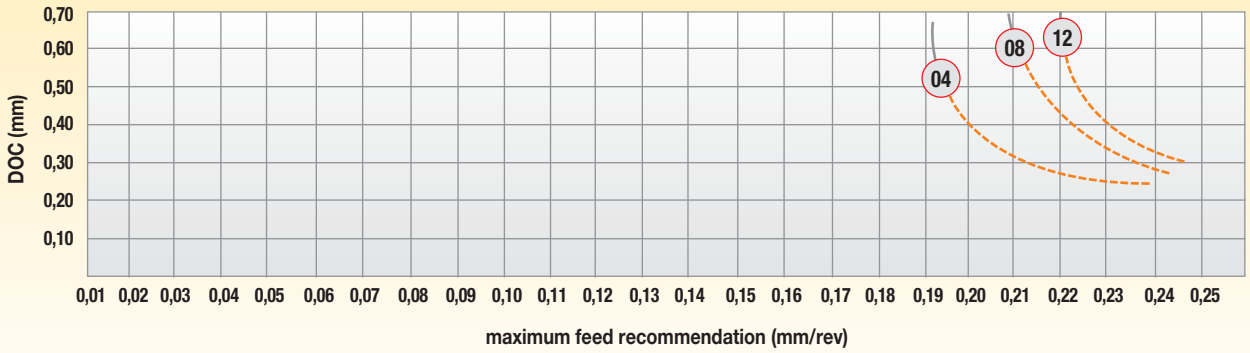
T-Land Width (W): 0,1mm

Number in circle is NOSE RADIUS*



T-Land Width (W): 0,2mm

Number in circle is NOSE RADIUS*



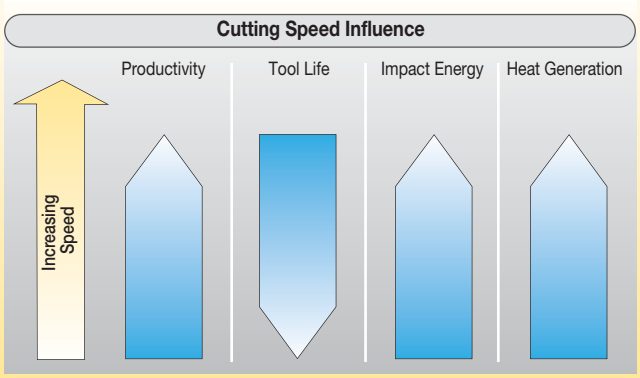
*NOTE: Colored lines represent proven solutions; grey lines represent theoretically possible solutions.

Step 5 • Choosing the speed range

How to Use

Using the application information, determine your position in the INPUT DATA table below and select the speed range area with which it intersects for each input parameter. If different speed ranges result, choose the lowest speed range.

The shaded area extends to the minimum and maximum speedsfor the application. The suggested starting speeds can be taken as the minimum line of this range.



Speed Range Selection for Hard Turning

INPUT DATA

Depth of Cut (mm)
Larger depths of cut need stronger grades.

0,10 | 0,20 | 0,30 | 0,40 | 0,50 | 0,60 | 0,70

Interruption Severity
The angle between the cutting direction and the edge of the interruption has a big influence on the severity of an interrupt impact.

0° | 30° | 60° | 90° | 120°

Workpiece Hardness (HRC)

45 | 50 | 55 | 60 | 65

OUTPUT DATA

Speed Range (m/min)

60 | 100 | 140 | 180 | 220 | 260 | 300 | 340

CBN Inserts with Chipbreaker

For hardened steels, grinding is no longer the preferred method in finish turning operations because hard turning now drastically reduces cost per part. With high metal removal rates, faster machine setup, quicker cycle times, and greater flexibility, it is obviously the preferred method.

Despite these advantages, hard turning has sometimes had issues with poor chip control causing surface scratching and bird-nest formations. Kennametal solved these problems by integrating special chipbreaking geometries into two high-performance PCBN grades, giving customers total control of their hard machining.

Ideally, hardened steels are machined with a low or medium CBN content grade where the workpiece encounters few interruptions. However, because of CBN's structure, the industry had not been able to add chipbreaking technology to low content CBN inserts. KB5610™ with chipbreaker is, therefore, the first product of its type to deliver chipbreaking where it's most needed. KB5625™ with chipbreaker provides a chipbreaking solution for applications requiring more toughness.

Together, these tools give Kennametal customers industry-leading flexibility in choosing the right tool for the job.

Features

- Chipbreaker for improved chip control.
- KB5610 ideal grade for continuous operations.
- KB5625 ideal grade for continuous and interrupted operations.

Benefits

- Improved surface quality to reduce scrap rates.
- Reduction of machine stops due to swarf issues to improve machine availability.
- Reduction of bird-nest formation to reduce clean up time.
- Two grades to choose from for best performance.

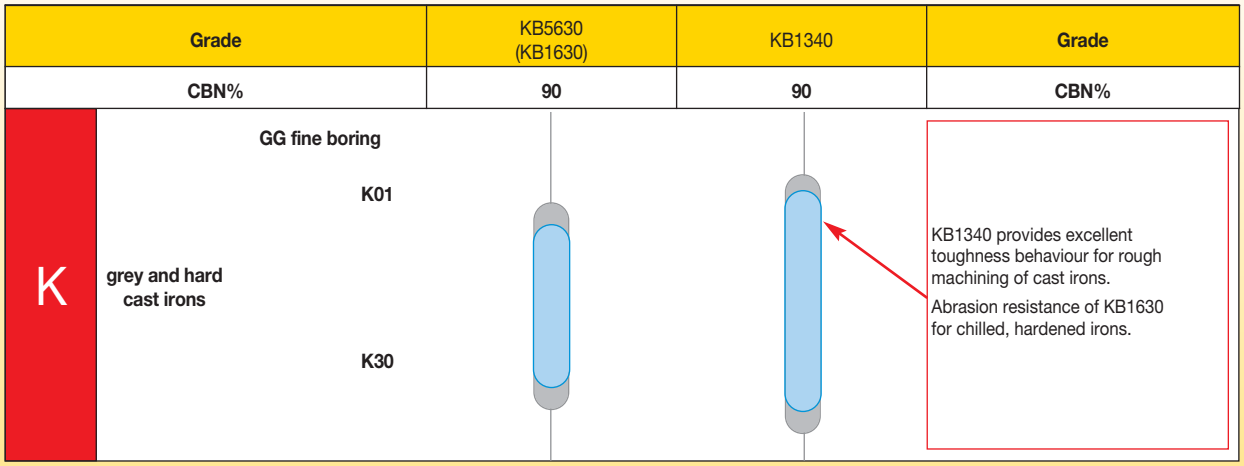
ap:	0,3mm (.012")	0,3mm (.012")
Pieces/edge:	2	4
Chip shape:	Snarling or infinite helix	Discontinuous

Result: Better chip control and double tool life

PCBN portfolio



High content PCBN grades: KB1340™, KB1630™, and KB5630™

General Application Area

Continuous and interrupted machining of ferrous alloys where the main wear mode is abrasive and a strong edge is required.

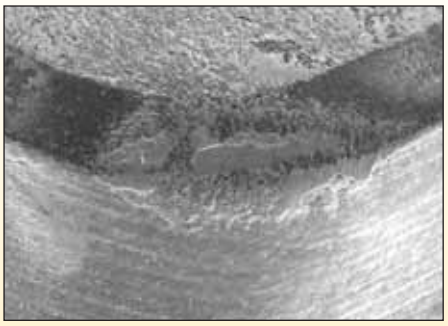
Primary Target Workpiece Materials

- Grey cast irons.
- High Cr content irons.
- Chilled and hardened irons.
- Co-, Ni-, and Fe-based hard facing alloys.
- Other alloys in which there is a high concentration of carbide forming elements, and the primary wear is abrasive.

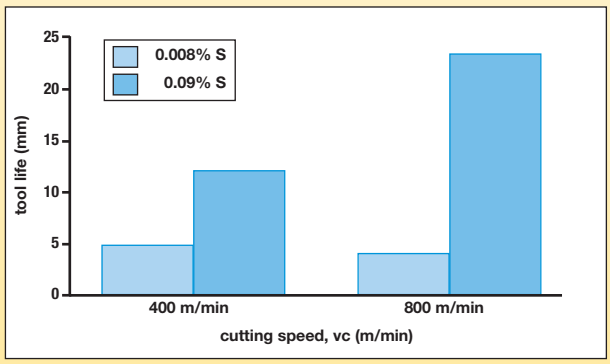
Machining grey cast iron

The largest application area for KB1340™ is machining of grey cast irons. Following are a few particulars of this application:

- GCI have to be machined dry. The application needs to generate high levels of heat in order to create a protective oxide layer on the tool.
- It is important to confirm with the customer that the GCI has been properly aged, and it has a sulphur content over 0,05%.
- The starting point for edge preparation should be 0,10mm (.004") x 20° for finishing (DOC <0,5mm) and 0,20mm (.008") x 20° for roughing.
- The edge preparation angle should increase if any interruptions are present, up to 35°.
- Lack of aging and/or low sulphur content can lead to a decrease in tool life of up to 10 times!
- A slow feed approach/engagement of the tool is recommended to minimise chipping and notching.



Proper application of KB1340 — formation of protective layer, tool life should exceed 70 km sliding distance.



Comparison of the life of PCBN cutting tools in machining two different grey cast irons, primarily differing in sulphur content.

Application recommendations

High-content PCBN grades are intended for use in negative rake clamp-type toolholders, boring, recessing tools, and milling heads. Due to the dynamic loads that occur in the machining of hard ferrous materials and the conditions under which these grades operate, frequently involving shocks from interrupted cutting, it is advisable to strengthen the tool system as much as possible and use dimpled inserts where possible.

Dimple Clamps for Added Stability

Typical Application

Continuous cost pressures force manufacturers of grey cast iron brake disks to look for cost-cutting solutions. CBN inserts deliver high productivity and long tool life. Kennametal has developed the solid, high-content grade KB1340™, which provides superior performance when machining grey cast iron components, such as brake disks or fly wheels. To ensure secure seating in the toolholder, the inserts are available with dimple-design clamping. The clamps fit Ceramtec holders, which makes the conversion to Kennametal tooling easier.

Higher Productivity and Profitability

- Ensures tight and rigid clamping.
- Dimpled insert with special clamping provides increased stability in the pocket.
- Ideal for use in heavy-duty machining applications.
- Cladded clamps for improved resistance against chip wash are available upon request.
- The shallow dimple design enables the use of less expensive 4,76mm (3/16") inserts.
- Round dimple design works with custom tooling where clamping direction must be offset due to space limitations.

11. Reduce clearance angle.
12. Increase edge hone dimension.
13. Reduce edge hone dimension.
14. Reduce feed and/or depth of cut.
15. Increase feed and/or depth of cut.

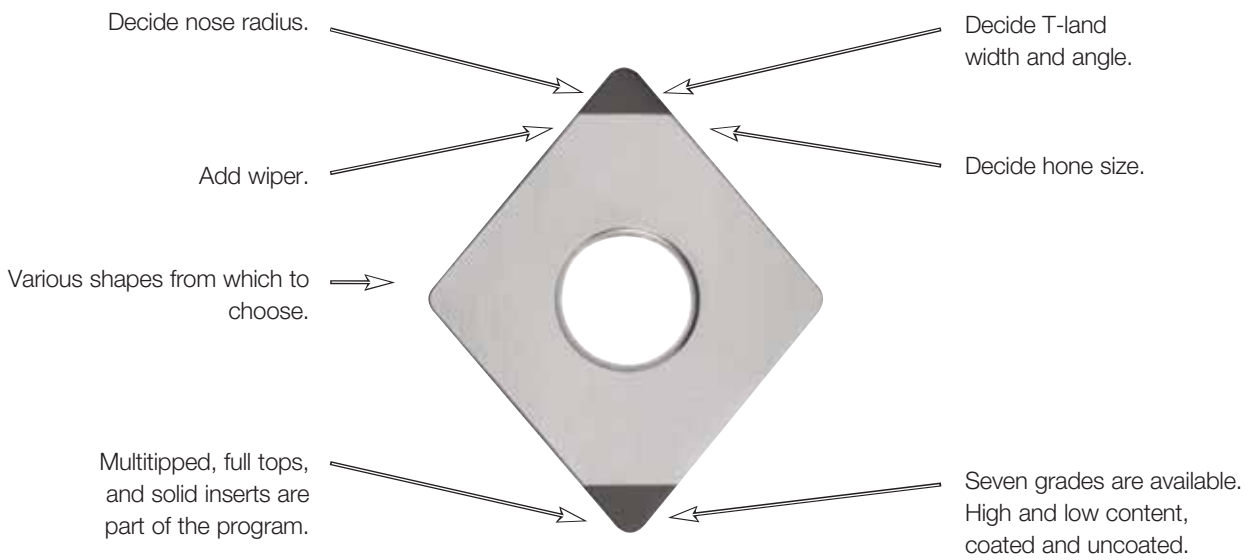
Quick-Turn Solutions Program for CBN Inserts

Standard inserts incorporate latest grade, coating, edge preparation, and manufacturing technology. They cover a wide range of applications and provide superior performance.

However, in some cases, further fine tuning is needed to reach the optimum performance point. Therefore, Kennametal has set up the Quick-Turn Solutions Program (QTSP) to allow edge preparation modifications on selected styles, grades, and formats to further enhance the tool performance.

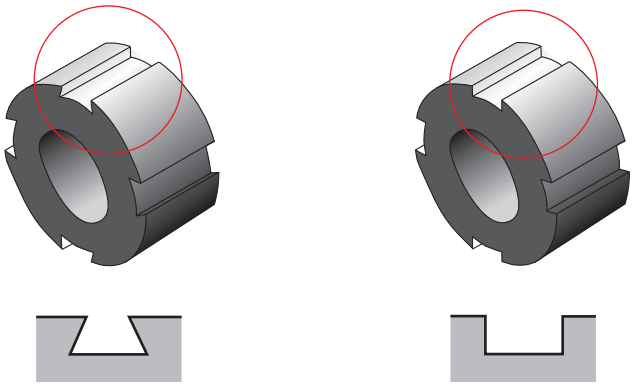
Technical Details • Options for a Customisation



For more information, please contact a Kennametal Sales Representative, Authorised Kennametal Distributor, or visit www.kennametal.com.

Teardrop (TD Edges) for Demanding Applications

Teardrop (TD) edges are advanced edge preparations used in heavily interrupted operations where standard edge preps fail. They can be ordered as specials.

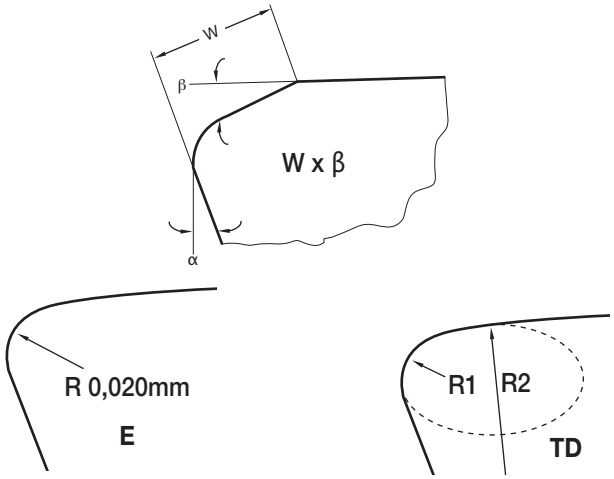


Possible TD Edges

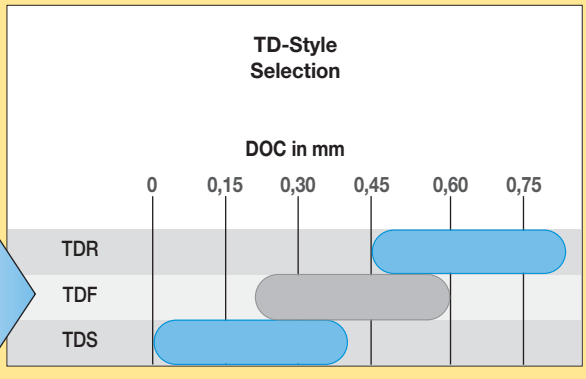
W – Edge Prep Width

α – Clearance Angle

β – Edge Prep Angle – between rake face and K-land



Edge Preparation Specifications		
E	hone only	0,020mm
W x β	width in 0,001mm x angle	
TDR	ellipse based on 0,25 x 30°	
TDF	ellipse based on 0,20 x 20°	
TDS	ellipse based on 0,10 x 20°	

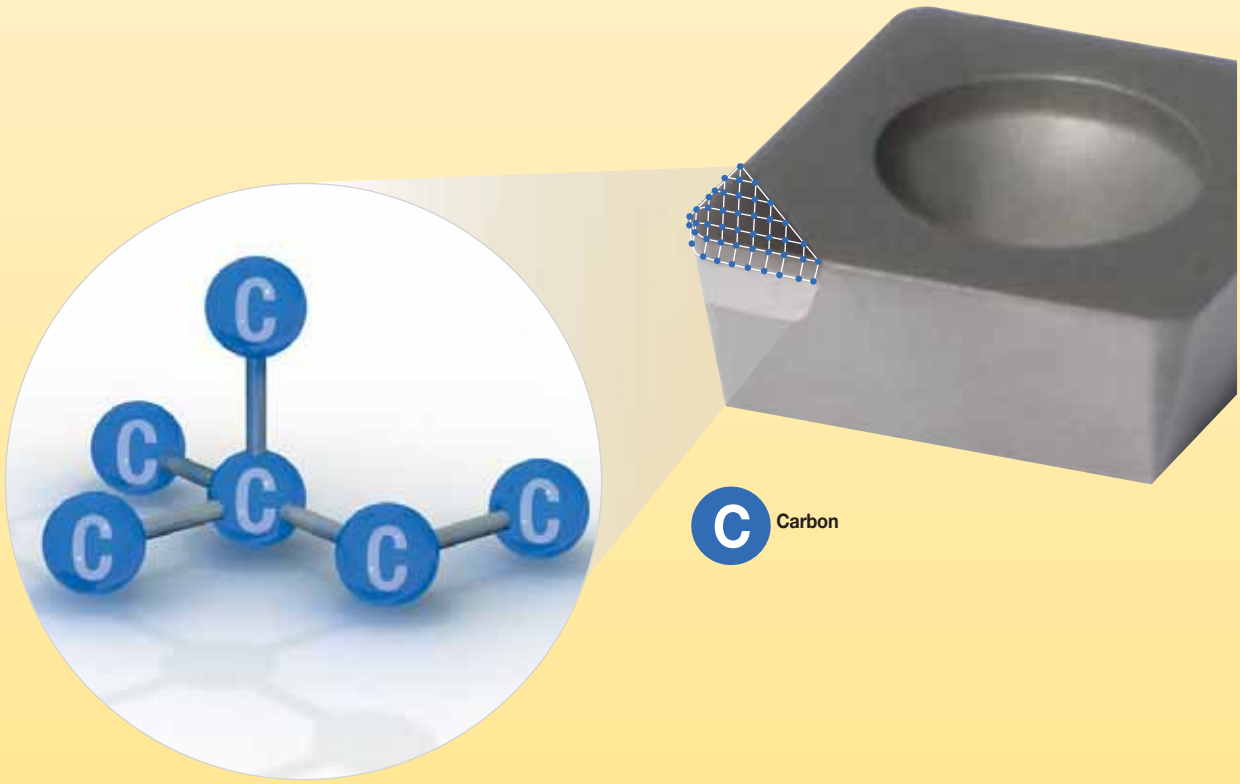


PCD

The current global metalcutting climate has put increased focus on high productivity and cost reductions coming from cutting tools. These requirements lead to the rapid growth and implementation of cutting tools using superhard materials. As the name implies, these materials have a significant advantage in hardness over conventional tool materials, which from the end user point of view, translates into increased productivity (higher cutting speeds, longer tool life, etc.), lower tooling cost per part, and also, the ability to process materials previously un-machinable with conventional tooling.

The most widely known superhard materials are diamond and cubic boron nitride. Our industry uses the polycrystalline forms of these materials, i.e., polycrystalline diamond (PCD) and polycrystalline boron nitride (PCBN). PCD tooling is mainly targeted at the machining of non-ferrous materials (e.g., aluminium alloys, plastics, CFRPs, composites, titanium alloys, ceramics, carbides, etc.) whereas PCBN targets iron-based alloys (e.g., cast irons, hard steels, iron-based composites, etc.)

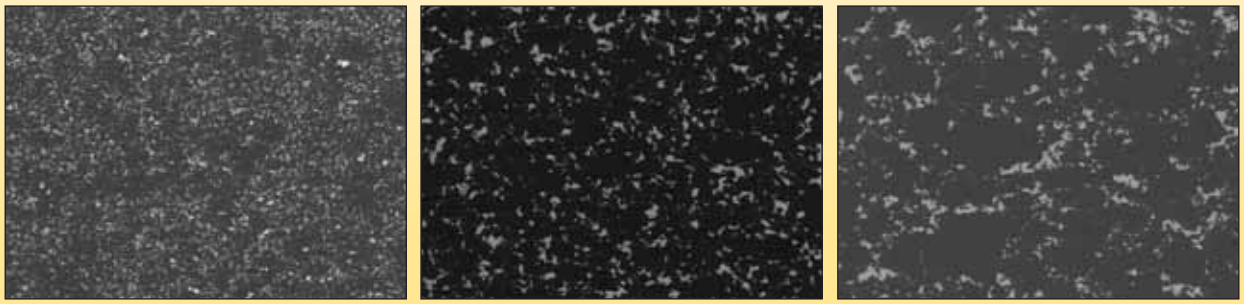
Kennametal is at the forefront of developing and implementing superhard materials in our standard and special tooling solutions across all our product lines. Kennametal's approach to superhard tooling starts with customer needs and constraints. We then use fundamental research to develop the best superhard solutions that would make available the best value for the customer and respond to their specific demands.



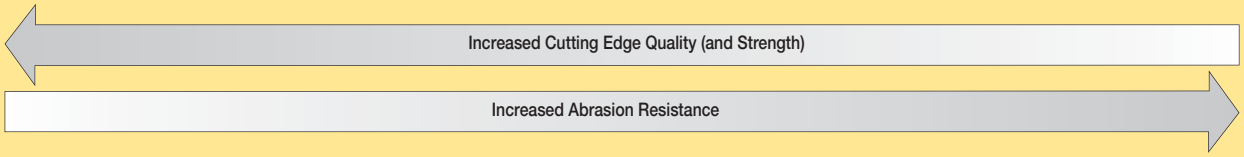
Different kinds of PCD grades

Application demands determine the choice of cutting tool material. The important requirements of the material are:

- Abrasion resistance.
- Toughness and strength.
- Thermal behaviour.



Fine Grain **Medium Grain** **Coarse Grain**



Comparison of different PCD grades

Behaviour in Applications

grade characteristics:	KD1400™	fine grain	medium grain
grain size:	0,5–1 µm	2 µm	10 µm
chip resistance:	●●●●●●●●●●○	●●●●●●●●●○	●●●●●●●●○○
abrasion resistance:	●●●●●○○○○○	●●●○○○○○○○	●●●●●○○○○○

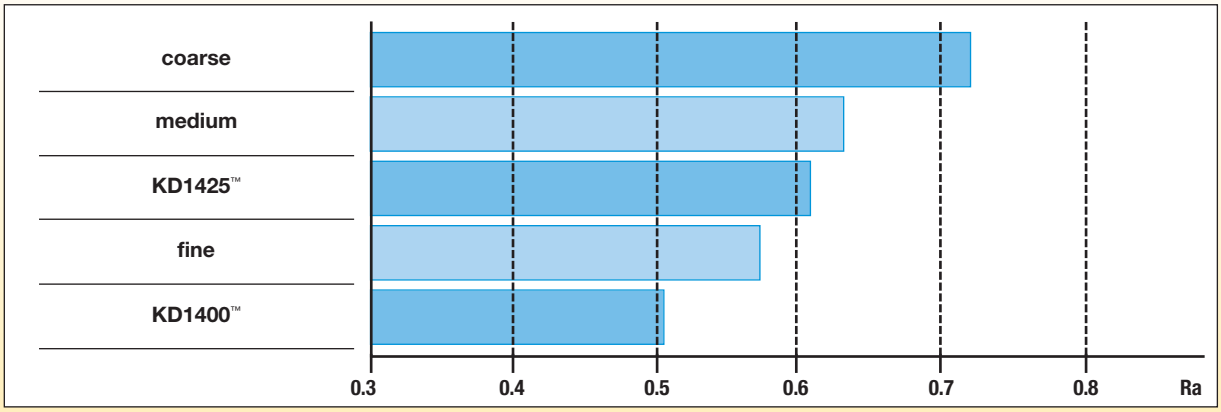
Behaviour in Applications

grade characteristics:	coarse grain	KD1425™	KD1405™
grain size:	25 µm	2–30 µm	0 µm
chip resistance:	●●●●●●●○○○	●●●●●●○○○○	●●●●●●●○○○
abrasion resistance:	●●●●●●●○○○	●●●●●●●●○○	●●●●●●●●●●

Chipping can be defined as the formation of small notches on the cutting edge and generally occurs when the load at the cutting edge exceeds the strength of the material. An A390 alloy was used in edge milling tests to assess the chip resistance of the different PCD grades.

Abrasion is characterised by the development of grooves and ridges on the flank of the tool in the direction of sliding. The abrasion resistance of PCD was evaluated on a high silicon aluminium alloy, A390, in a continuous cutting operation.

PCD grain size • Workpiece surface finish



This chart illustrates the influence of the PCD grain size on surface finish in turning 18% silicon aluminium alloys. The best finish is obtained with the submicron grade KD1400. While the grade KD1425 contains grains as large as 30 microns, this material's unique multimodal grain size distribution results in a microstructure of closely packed diamond grains resulting in a smoother ground edge.

KD1400 advantages at a glance • Summary

A sharper cutting edge	• Clean cuts on carbon fibres. • Permits larger nose radii for increased feed and productivity without loss in finish.
A less serrated (smoother) cutting edge	• Improved surface finish — potentially reducing rough and intermediate honing.
Permits a more positive rake	• Reduced cutting forces, delamination, and burr formation.
Permits increased clearance	• Providing for lower tool wear rates and lower push-off forces — thereby improving process capability.
Provides unparalleled chip resistance	• Suitable for heavy milling and interrupted turning with positive edge geometries and longest tool life.
Comparable abrasion resistance to a coarse grade PCD	• Covers the widest range of applications with a single grade — reduce inventory and complexity.

PCD tool failure modes

The gradual wear observed on diamond cutting tools can be divided into:

- Mechanically activated wear (abrasion, adhesion, and wear by microfracture).
- Tribochemical wear (dissolution/diffusion wear and formation of new chemical compounds).

Abrasion

The primary mode of mechanically activated wear for diamond cutting tools is abrasion, which is the removal of tool material by a scoring action of protruding asperities and hard phase inclusions in the workpiece and chip (e.g., silicon grains in aluminium-silicon alloys).

Abrasion is characterised by the development of grooves and ridges in the direction of the tool sliding against a newly machined surface of the workpiece or chip sliding against the rake face.

The severity of abrasion can be increased in cases where the workpiece material contains hard inclusions or when there is hard wear debris from the workpiece or the tool at the interface.

Tribochemical

Tribochemical wear is particularly relevant in the machining of titanium alloys when the carbon in the tool material diffuses into the adhered titanium layer to form a TiC boundary layer on the rake face of the tool.

This boundary quickly becomes saturated with tool constituents and can then act as a protective barrier against any further diffusion.

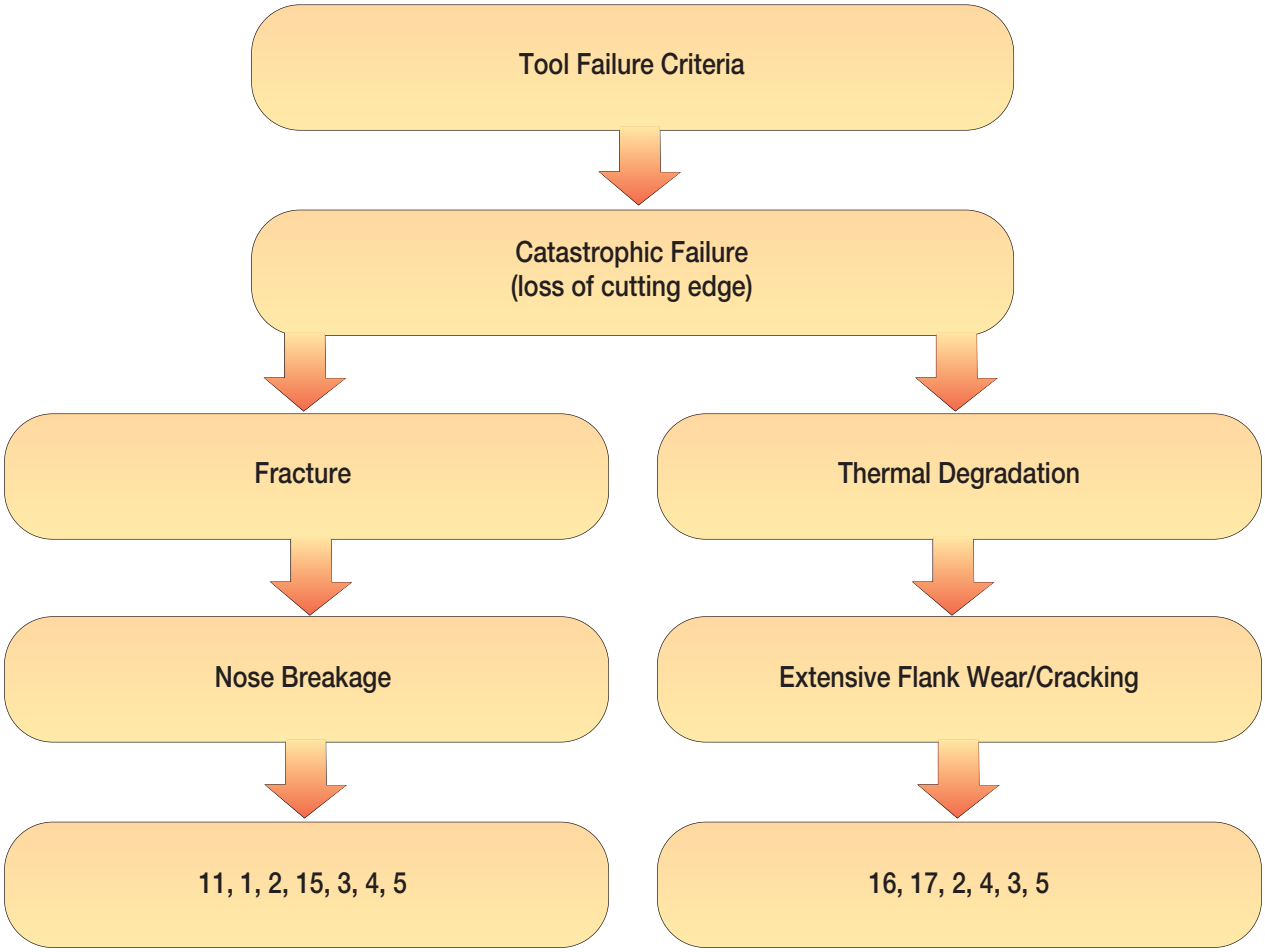
Attrition

When two surfaces slide over each other, particularly in the absence of a lubricant, some adhesion can occur at the points of contact. Adhesive wear (often called attrition) in cutting tools involves the mechanism in which individual grains or small grain aggregates are pulled out of the tool surfaces and are carried away at the underside of the chip or are torn away by the adherent workpiece. The term “plucking” is also used to describe the loss of tool particles from the edge or faces. For example, when the forces are high enough, the TiC boundary layer that forms in titanium machining can be removed from the rake face of the tool transporting with it a pulled-out diamond grain, to form a crater. Once this crater becomes excessive, fracture of the tool could occur due to the geometrical weakening of the edge. Negative geometries tend to enhance the possibility of adhesive wear and built-up edge formation. Subsequent break-up (fracture) of the adhesive tool/workpiece joints results in attrition wear. The wear scars produced by attrition are rough, as opposed to the usually smooth wear surfaces generated by tribochemical wear.

Microfracture

When cutting tools are employed for continuous machining of high hardness materials or interrupted machining, small fractures can appear on the cutting edge. If fracturing is small, the cutting tool can usually still be used. Wear by microfracture involves a less severe form of fracture and includes chipping, spalling, and cracking whereby the cutting tool can be reused.

Tool Failure and Wear:



Remedial Action

1. Increase nose radius.
2. Reduced clearance angle.
3. Reduce feed.
4. Reduce cutting speed.
5. Reduce DOC.
6. Increase clearance angle.
7. Use a positive rake angle.
8. Add a small edge hone.
9. Use neutral rake angle.
10. Increase lead angle.
11. Select a tougher grade.
12. Select more abrasion-resistant grade.
13. Select a higher TRS grade.
14. Choose a more chemically inert grade.
15. Increase thickness.
16. Select a more thermally stable grade.
17. Use coolant.

Tool Failure and Wear:

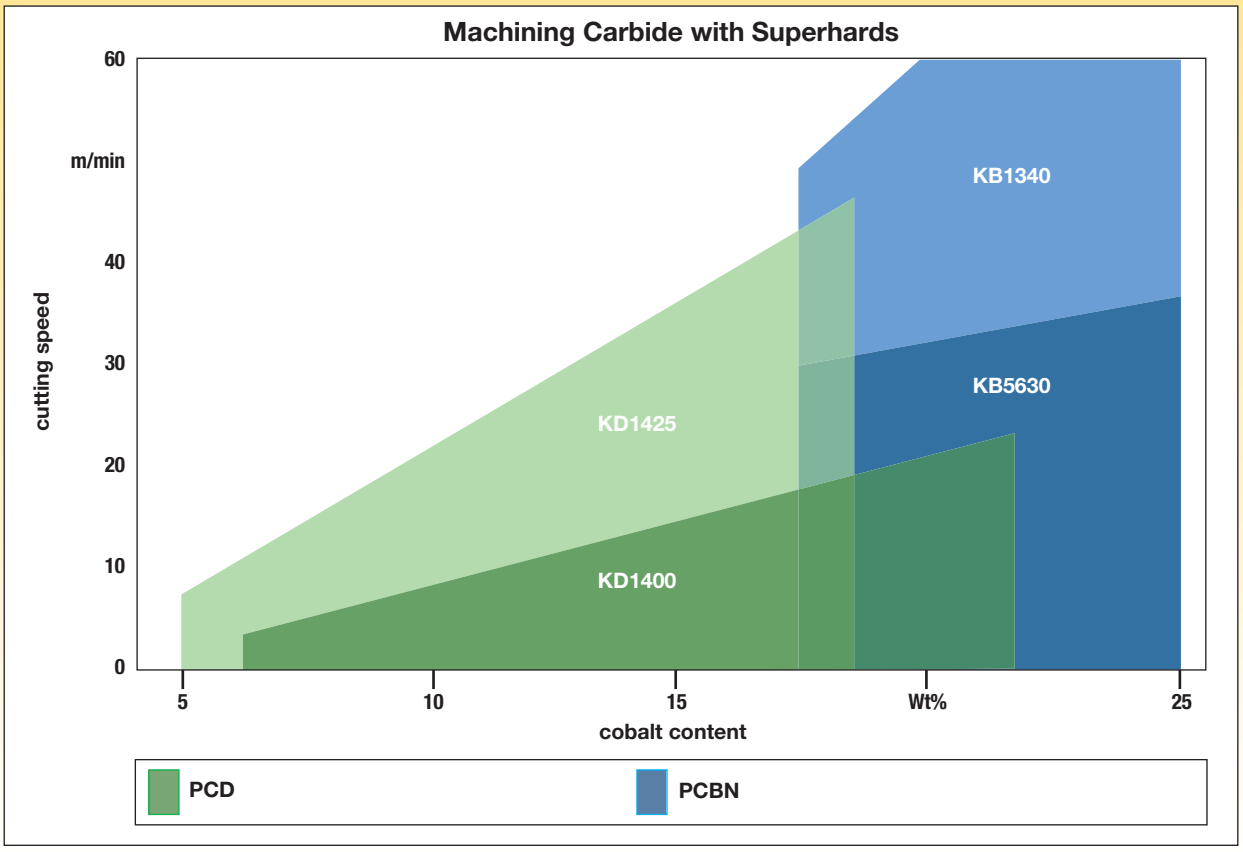
Application Notes

- PCD tools should be used with a neutral geometry and 7° clearance.
- PCD edge preparation should be either F or E. An E edge preparation is preferred for larger DOCs, low Co content, and interrupted machining.
- PCBN tools should be used in a negative geometry with 5° to 7° negative rake.
- PCBN edge preparation should be either E or S01025.
- Coolant application is recommended and very important, especially with PCD application where failure is determined by heat generation.
- PCD can also be applied for Co concentrations higher than 19% as long as minimal heat is generated.



CGI boring with turning insert

Machining Parameters

- Feed = 0,1mm (.0038")
- Depth of cut = 0,25mm (.0098")

Tool Life Criteria

- VB max = 0,3mm (.0098")
- Number of bores = 1500

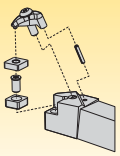
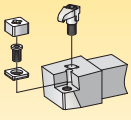
Clamping Styles



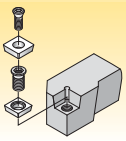
Kenclamp Style

- Uses Kenloc inserts.
- Unique clamp design provides rigid clamping.
- Ensures insert repeatability and seating.
- Reduced chatter and improved tool life.



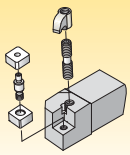
MTS Style Modular Tooling System

- Proven superior system in holding ceramic inserts rigidly in turning and profiling operations.
- Uses standard insert sizes — 80°, 75°, 55°, square, and trigon.
- This system offers the added versatility of using optional hardware to hold standard Kendex and Kenloc inserts.



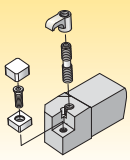
Screw-On Style

- Top clamping by screw for Screw-On inserts.



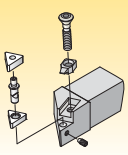
Kenloc Style

- Uses Kenloc inserts.
- Lock pin and top clamp provide rigid clamping.
- Wide variety of insert styles may be used.
- Tools may be used with or without clamp.



Kendex Style

- Uses Kendex inserts.
- Chipbreaker option available for ceramic inserts.
- Wide variety of insert styles may be used.

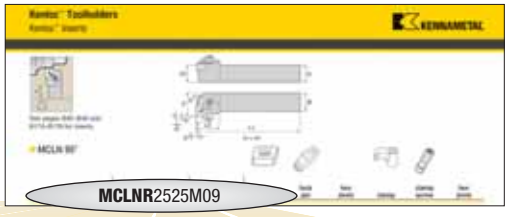


Wedgelock™ Style

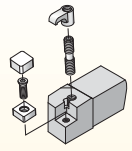
- Top and hole clamping for inserts with hole.

How Do Catalogue Numbers Work?

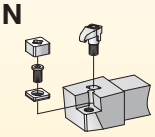
Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



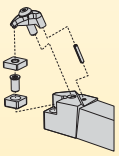
M — Insert Holding Method

C


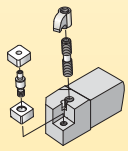
Kendex™

N


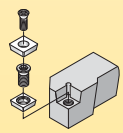
Top Notch™ Profiling

D


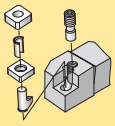
Kenclamp™

M


Kenloc™

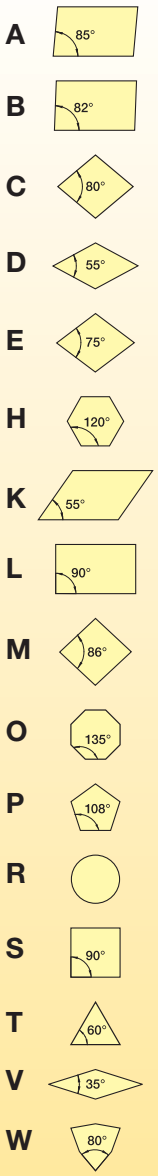
S


Screw-On

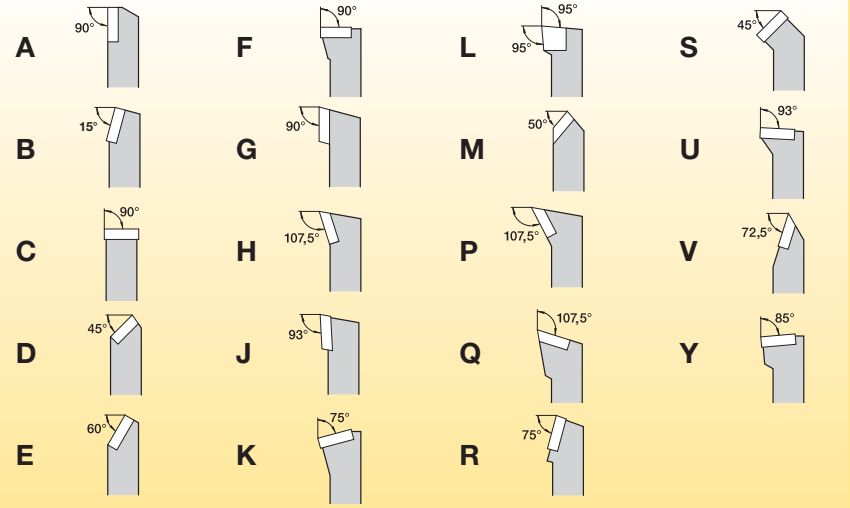
P


Kenlever™

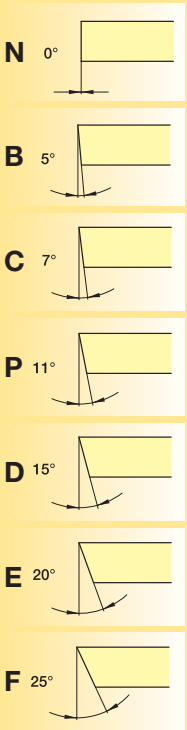
C — Insert Shape



L — Tool Style or Lead Angle



N — Insert Clearance Angle

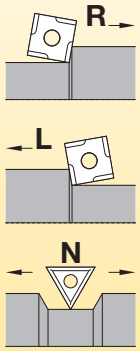


R — Hand of Tool

R = Right hand

L = Left hand

N = Neutral



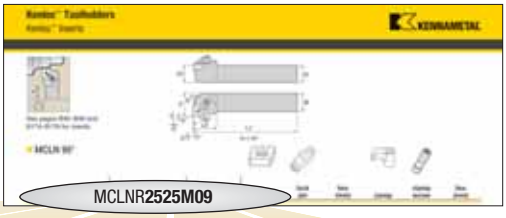
Additional Information

C = Deep pocket for ceramic insert

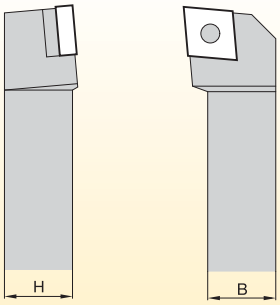
S = Single pocket locating wall

F = Straight shank, no offset

By referencing this easy-to-use guide, you can identify the correct product to meet your needs.



25 — Shank Dimensions



The 7th and 8th position shall be a significant two-digit number that indicates the holder cross section. If the dimension for the width "B" or the height "H" is represented by a one digit number, a 0 (zero) will be used in front of it.
Example: 8mm = 08

25 — Shank Dimensions

M — Tool Length

L1	ISO
32	A
40	B
50	C
60	D
70	E
80	F
90	G
100	H
110	J
125	K
140	L
150	M
160	N
170	P
180	Q
200	R
250	S
300	T
350	U
400	V
450	W
500	Y
Special Design	X

09 — Insert Size

Cutting Edge Length L10

H	Hexagon 120°	
O	Octagon 135°	
P	Pentagon 108°	
S	Square 90°	
T	Triangular 60°	
R	Round —	
C	Rhomboid 80°	
D		55°
E		75°
M		86°
V		35°
W	Trigon 80° with enlarged corner angles	
L	Rectangular 90°	
A	Parallelogram 85°	
B		82°
K		55°

Additional Information

KC = Kenclamp™

H4 = Wedgelock™ clamping system

M = MTS clamping system for ceramic and PCBN inserts

Insert Thickness *(optional)*

04 = 4,76mm
06 = 6,35mm

See pages B40–B49 and B174–B176 for inserts.

KM™ QUICK CHANGE

The ISO 26622 Standard

KM™ Quick Change Tooling — the ISO 26622 Standard.

- Our unique three-surface taper contact design makes this the most rigid and accurate modular quick-change tooling system available.
- It's highly versatile, too: can be fully and easily employed on your lathe, machining centre, multi-spindle, or mill-turn machine — significantly reducing your tool-change and part setup downtime!

Experience the advantages at your Authorised Kennametal Distributor or at **www.kennametal.com**.

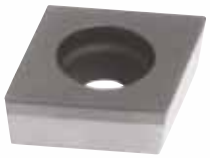
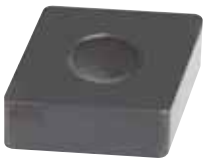
Quick-Turn Solutions Program for CBN Inserts

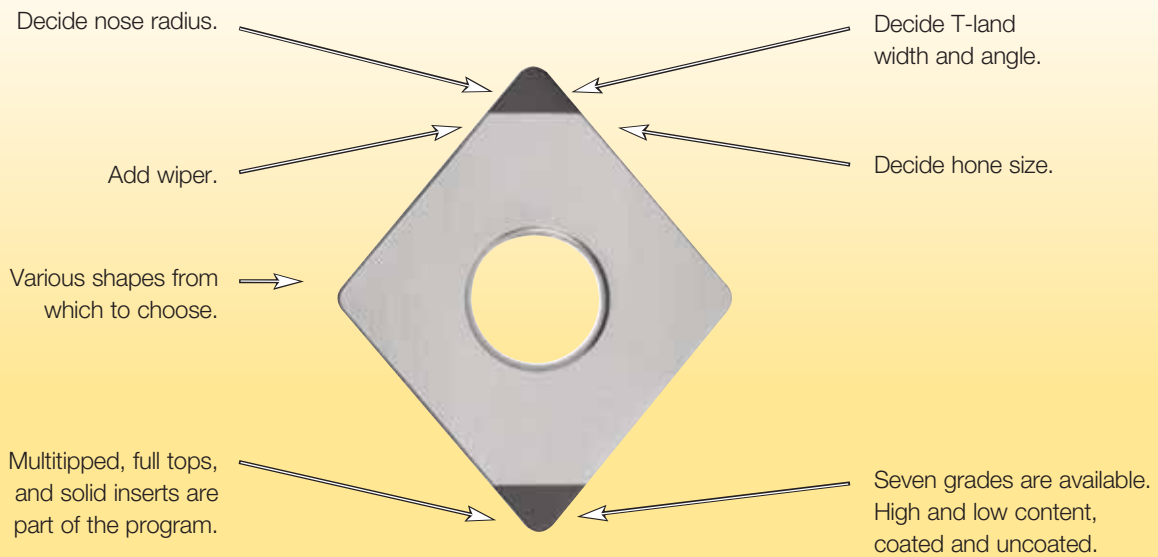




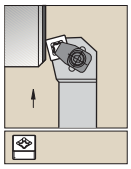
Standard inserts incorporate latest grade, coating, edge preparation, and manufacturing technology. They cover a wide range of applications and provide superior performance.

However, in some cases, further fine tuning is needed to reach the optimum performance point. Therefore, Kennametal has set up the Quick-Turn Solutions Program (QTSP) to allow edge preparation modifications on selected styles, grades, and formats to further enhance the tool performance.

Technical Details • Options for a Customisation



For more information, please contact a Kennametal Sales Representative, Authorised Kennametal Distributor, or visit www.kennametal.com.



See pages B122 and B183 for inserts.

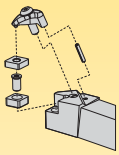
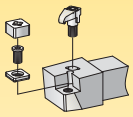
Clamping Styles



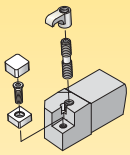
Kenclamp™ Style

- Suitable for Kenloc inserts.
- Unique clamp design provides rigid clamping.
- Ensures insert repeatability and seating.
- Reduced chatter and improved tool life.



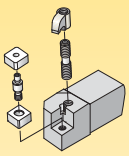
MTS Style

- Proven superior system in holding ceramic inserts rigidly in turning and profiling operations.
- Uses standard insert sizes — 80°, 75°, 55°, square, and trigon.
- This system offers the added versatility of using optional hardware to hold standard Kendex and Kenloc inserts.



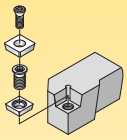
Kendex™ Style

- Suitable for Kendex inserts.
- Chipbreaker option available for ceramic inserts.
- Wide variety of insert styles may be used.



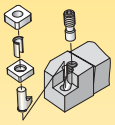
Kenloc™ Style

- Suitable for Kenloc inserts.
- Lock pin and top clamp provide rigid clamping.
- Wide variety of insert styles may be used.
- Tools may be used with or without clamp.



Screw-On Style

- Top clamping by screw for Screw-On inserts.

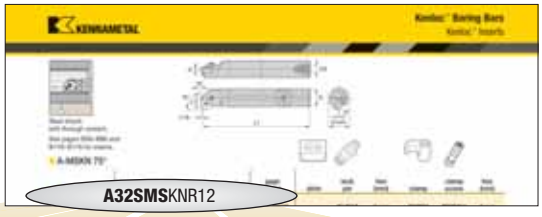


Kenlever™ Style

- Proven superior system for holding ceramic inserts rigidly in turning and profiling operations.
- Can be used on Kendex or Kenloc inserts using optional hardware.

How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



A — Bar Type

A — Steel bar with coolant

S — Steel bar without coolant

C — Carbide bar

D — DeVibrator bar with coolant

D — Tuneable bar with coolant

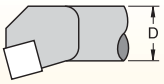
E — Carbide bar with coolant

B — DeVibrator

H — Interchangeable head

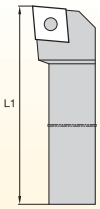
L — Heavy metal bar with coolant

32 — Bar Diameter



Metric:
A two-digit number indicates the bar diameter in mm.
If the diameter is represented by a one digit number, a 0 (zero) will be used in front of it.
Example: 8mm = 08

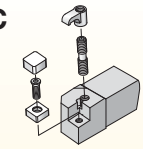
S — Bar Length



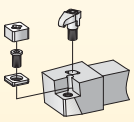
L1		ISO
32	=	A
40	=	B
50	=	C
60	=	D
70	=	E
80	=	F
90	=	G
100	=	H
110	=	J
125	=	K
140	=	L
150	=	M
160	=	N
170	=	P
180	=	Q
200	=	R
250	=	S
300	=	T
350	=	U
400	=	V
450	=	W
500	=	Y
Special Length	=	X

M — Insert Holding Method

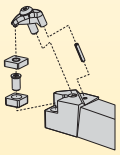
C — Kendex™



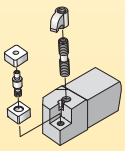
N — Top Notch™ Profiling



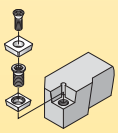
D — Kenclamp™



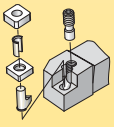
M — Kenloc™



S — Screw-On



P — Kenlever™



S — Insert Shape

A — 85°

B — 82°

C — 80°

D — 55°

E — 75°

H — 120°

K — 55°

L — 90°

M — 86°

O — 135°

P — 108°

R

S — 90°

T — 60°

V — 35°

W — 80°

Looking for a product that's not shown in this catalogue?
Check the Kennametal website!

Online product catalogue available 24/7

Visit **http://www.kennametal.com/turning/** to browse our electronic catalogue any time you're looking for Kennametal's best tooling solutions. It's fast, free, and always available. The online e-catalogue is updated weekly with products and solutions for milling, turning, drilling, and tooling systems applications.

Cartridges

Primary Application

Modern machining operations demand high-quality, high-performance toolholders that provide straightforward design and application versatility.

Standard Kennametal cartridges are ideal for turning tools with one, or several, cutting edges. A wide range of cartridge sizes and styles provide numerous combinations and application possibilities.

Features and Benefits

Kenloc™ Style (M-Clamping)

- Used for Kenloc inserts.
- Lock pin and top clamp provide rigid clamping.
- Wide variety of insert styles may be used.
- Tools may be used with or without top clamp.
- Optional hardware available for thicker inserts.
- Extreme sturdy clamping system, specially designed for interrupted cuts.
- Tool is protected by a carbide shim.

Kenlever™ Style (P-Clamping*)

- Proven superior system for holding ceramic inserts rigidly in turning and profiling operations.
- Can be used on Kendex or Kenloc inserts using optional hardware.
- Lever-type clamping system for negative indexable inserts with hole to DIN 4988 and positive round inserts more than 20mm in diameter.
- Inserts with one- and two-side chip control geometries have positive rakes from 6–18°.
- Advantages include fast insert changes and no interference with chip flow.

*NOTE: P-style available in metric sizes only.

Kendex™ Style (C-Clamping)

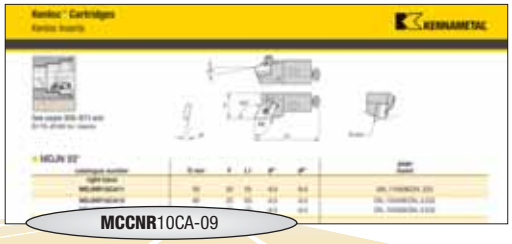
- Suitable for Kendex inserts.
- Chipbreaker option available for ceramic inserts.
- Wide variety of insert styles may be used.
- Top clamping system for negative and positive indexable inserts to DIN 4968.
- Universal clamping system is robust and easy to handle.
- Some height-adjustable clamps enable the use of additional chipbreakers.
- Carbide shim provides additional tool protection.

Screw-On Style (S-Clamping)

- Used for Screw-On inserts.
- Top clamping by screw.
- Screw clamping system for positive indexable inserts with countersunk hole to DIN 4967.
- Compact design using a minimum of spare parts for high reliability and cost efficiency.
- Toolholders with cutting edge heights greater than 16mm (.625") and insert ICs from 9,52mm (.375") are secured by a threaded bushing.
- Carbide shim provides additional tool protection.

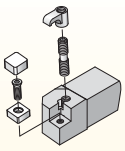
How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



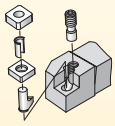
M — Insert Holding Method

C



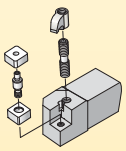
Kendex™

P



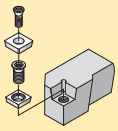
Kenlever™

M



Kenloc™

S



Screw-On

C — Insert Shape

Grooving and Cut-Off

Grooving Application Guide D2–D3

Grades and Grade Descriptions D4–D7

A2 Cut-Off D8–D25

A3 Deep Grooving D26–D61

A4 Grooving and Turning D62–D111

Top Notch Grooving D112–D139

KGF and KGT Cut-Off Inserts D142–D145

	Cut-Off	Grooving	Face Grooving
Application			Top Notch™ Grooving generally recommended for cutting depth/width ratios of 1,5 or less		**Inserts** • Cutting widths from 0,8–9,5mm. • Cutting depths from 1,27–12,70mm. • Chip control, positive rake, and neutral flat top inserts are available. **O.D. Application** • Integral shank toolholders and KM™ heads are available. **I.D. Application** • Boring bars with a 11,5mm minimum bore diameter.	**Minimum Face Groove Diameter Capabilities** • Standard inserts: 54–330mm depending on size. • NF/NFD face grooving inserts: 24–57mm. • All have unlimited maximum diameter. **Cutting Width Range** • Standard inserts: 0,8–9,5mm. • NF/NFD face grooving inserts: 2–6,35mm. **Cutting Depth Range** • Standard inserts: 1,27–12,7mm. • NF/NFD face grooving inserts: 3,8–6,35mm.
A4™ Grooving and Turning	**Cut-Off Capabilities** • Cut-off widths from 1,5–4,05mm. • Satisfies extreme demands for rigidity and dimensional accuracy. • Integral screw-clamping toolholders with 17mm maximum cutting depth available. • Economical double-edge inserts.	**Inserts** • Cutting widths from 2–10,05mm. • Precision ground and moulded inserts — all available with chip control. **O.D. Application** • Integral shank toolholders and modular KM heads are available. • Cutting depths from 14–26mm. **I.D. Application** • Boring bars with 25mm minimum bore diameter. • Cutting widths from 2–6,35mm.	**Minimum Face Groove Diameter Capabilities** • 16mm minimum diameter. • Unlimited maximum diameter. **Cutting Width Range** • Cutting widths from 2–10,05mm. **Cutting Depth Range** • Cutting depths from 12mm–24mm.
A3™ Deep Grooving generally recommended for cutting depth/width ratios of more than 1,5		**Inserts** • Cutting widths from 2,36–10,05mm. • Precision ground and moulded inserts — all available with chip control. **O.D. Application** • Integral shank toolholders and modular KM heads are available. • Cutting depths from 10–32mm. **I.D. Application** • Boring bars with 32mm minimum bore diameter.	**Minimum Face Groove Diameter Capabilities** • 25mm minimum diameter. • Unlimited maximum diameter. **Cutting Width Range** • Cutting widths from 3–6,35mm. **Cutting Depth Range** • Cutting depths from 10–32mm.
A2™ Cut-Off	**Cut-Off Capabilities** • Cut-off widths from 1,4–8mm. • Left- and right-hand styles with 6–16° lead angles. • Self-clamping blades and screw-clamping integral shank toolholders are available. • Single-edge inserts for maximum depth capability.		

	Grooving and Turning	Undercutting	Profiling
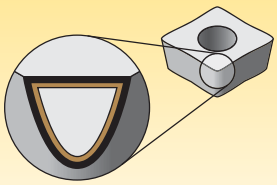
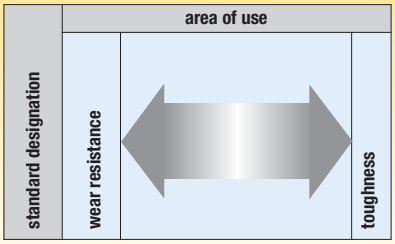
Application			Top Notch™ Grooving generally recommended for cutting depth/width ratios of 1,5 or less		**Top Notch Undercutting Capabilities** • Undercutting insert widths from 2,4–4mm. • Economical double-ended inserts.	**Recommended for Moderate to Heavy Stock Removal at Shallow Profile Depths** **Full Radius Inserts** • Cutting widths from 1,57–6,35mm. • Cutting depths from 2,39–6,35mm. **O.D. Application** • Integral shank toolholders and KM heads are available.
A4™ Grooving and Turning	**Recommended for Heavy Stock Removal, Particularly in Turning Applications** **Inserts** • Cutting widths from 2–10,05mm. • Double-ended, precision ground, and moulded inserts — all available with chip control. **O.D. Application** • Integral shank toolholders and modular KM™ heads are available. • Cutting depths from 14–26mm. **I.D. Application** • Boring bars with 25mm minimum bore diameter. • Cutting widths from 2–6,35mm.		**Recommended for Heavy Stock Removal** **Full Radius Inserts** • Cutting widths from 2–10,05mm. **O.D. Application** • Integral shank toolholders and modular KM heads are available. • Cutting depths from 14–26mm.
A3™ Deep Grooving generally recommended for cutting depth/width ratios of more than 1,5	**Recommended for Light Cutting** **Inserts** • Cutting widths from 2,36–10mm. • Precision ground and moulded inserts — all available with chip control. **O.D. Application** • Integral shank toolholders and modular KM heads are available. • Cutting depths from 10–32mm. **I.D. Application** • Boring bars with 32mm minimum bore diameter.	**Full Radius Undercutting** • Full radius inserts with cutting widths from 3–8mm at 45° lead angle. **35° Insert Undercutting** • 35° V-form inserts for profiling undercuts. • Toolholder lead angles of 45°, 93°, and 117.5°.	**Recommended for Light Cutting** • Full radius inserts with cutting widths from 3–8mm. • 32mm maximum cutting depth. • Integral shank toolholders and modular KM heads are available. • 35° V-form inserts are also available.
A2™ Cut-Off			

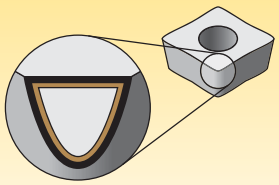


Reduce cycle times. High speed and feed capability. Long tool life. New multilayer coating provides better wear resistance.

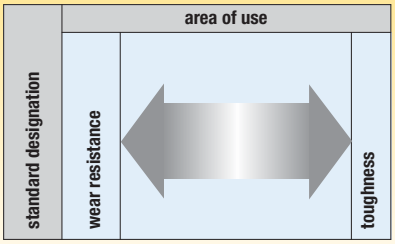


Grade

Coating	Grade Description	05	10	15	20	25	30	35	40	45
K68  C3	**Composition:** A hard, low binder content, unalloyed WC/Co fine-grain grade. **Application:** The K68 grade has excellent abrasion resistance for machining cast irons, austenitic stainless steels, non-ferrous metals, non-metals, and as an alternative to the K313 grade on most high-temp alloys. Use as a general-purpose grade for non-ferrous materials.									
		M								
		K								
		N								
		S								
K313  C3–C4	**Composition:** A hard, low binder content, unalloyed WC/Co fine-grain grade. **Application:** Exceptional edge wear resistance combined with very high strength for machining titanium, cast irons, austenitic stainless steels, non-ferrous metals, non-metals, and most high-temp alloys. Superior thermal deformation and depth-of-cut notch resistance. The grain structure is well controlled for minimal pits and flaws, which contributes to long, reliable service.									
		M								
		K								
		N								
		S								
KT315  C3, C7	**Composition:** A multilayered, PVD TiN/TiCN/TiN-coated cermet turning grade. **Application:** Ideal for high-speed finishing to medium machining of most carbon and alloy steels and stainless steels. Performs very well in cast and ductile iron applications too. Provides long and consistent tool life and will produce excellent workpiece finishes.									
		P								
		M								
		K								
K1025 (KMF)  C2, C6	**Composition:** Medium in hardness and binder content unalloyed WC/Co fine-grain grade. **Application:** For machining high-temp alloys, titanium, and non-ferrous workpiece materials under unfavourable conditions.									
		N								
		S								
KCP10  C3, C7	**Composition:** A specially engineered cobalt-enriched carbide grade with thick MTCVD-TiCN-Al_2O_3 coating for maximum crater-wear, deformation, and abrasion resistance for high-speed machining. **Application:** An excellent finishing to medium machining grade for a variety of workpiece materials including most steels, ferritic and martensitic stainless steels, and cast irons. The smooth coating provides good resistance to edge build-up and microchipping and produces excellent surface finishes.									
		P								
		M								
		K								
KCP25  C2–C3, C6–C7	**Composition:** A tough cobalt-enriched carbide grade with a newly designed multilayer MTCVD-TiCN-Al_2O_3 coating with superior interlayer adhesion. **Application:** General-purpose turning grade for most steels and ferritic and martensitic stainless steels. The substrate design ensures adequate deformation resistance along with excellent insert edge strength. Coating layers offer wear resistance and the post-coat treatment minimises microchipping and improves coating adhesion to the substrate for long tool life.									
		P								
		M								
		K								

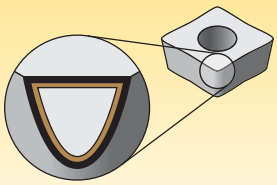


Reduce cycle times. High speed and feed capability. Long tool life. New multilayer coating provides better wear resistance.

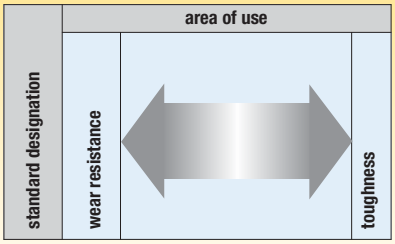


Grade

Coating		Grade Description	05	10	15	20	25	30	35	40	45
KCU10	C3–C4	**Composition:** An advanced multilayer PVD coating over a very deformation-resistant unalloyed carbide substrate. The new and improved coating improves edge stability with wide range speed and feed capabilities. **Application:** The KCU10 grade is ideal for finishing to general machining of most workpiece materials at a wide range of speed and feed capabilities. Excellent for machining most steels, stainless steels, cast irons, non-ferrous materials, and super alloys with improved edge toughness and higher cutting speed/feed capability.		P M K N S H								
KC5010	C3–C4	**Composition:** An advanced PVD TiAlN coating over a very deformation-resistant unalloyed carbide substrate. **Application:** The KC5010 grade is ideal for finishing to general machining of most workpiece materials at higher speeds. Excellent for machining most steels, stainless steels, cast irons, non-ferrous materials, and super alloys under stable conditions. It also performs well machining hardened and short chipping materials.		P M K N S H								
KC5510	C3–C4	**Composition:** An advanced PVD TiAlN-coated fine-grain tungsten carbide grade. **Application:** The KC5510 grade is specifically engineered for the productive machining of high-temp alloys. The fine-grained tungsten carbide 6% cobalt substrate has excellent toughness and deformation resistance while the advanced PVD coating enables metal cutting speeds double those of conventional PVD-coated cutting tools.		P M K N S H								
KCU25	C2, C6	**Composition:** An advanced PVD grade with hard AlTiN coating and ultra-fine-grain unalloyed substrate. The new and improved coating improves edge stability with wide range speed and feed capabilities. **Application:** The KCU25 grade is ideal for general machining of most steels, stainless steels, high-temp alloys, titanium, irons and non-ferrous materials, in a wide range of speeds and feeds, with improved edge toughness for interrupted cut and high feed rates.		P M K N S								
KC5025	C2, C6	**Composition:** An advanced PVD TiAlN-coated grade with a tough, ultra-fine-grain unalloyed substrate. **Application:** For general-purpose machining of most steels, stainless steels, high-temp alloys, titanium, irons, and non-ferrous materials. Speeds may vary from low to medium and will handle interruptions and high feed rates.		P M K N S								
KC5525	C2–C6	**Composition:** Advanced PVD TiAlN-coated fine-grain high-cobalt carbide grade. **Application:** The KC5525 grade utilises the same advanced PVD coating as the KC5510 grade in conjunction with a fine-grained tungsten carbide 10% cobalt substrate. The higher cobalt enables added security in interrupted cuts while the fine-grained WC maintains hardness-resisting deformation at higher speeds. Designed for medium to heavy interruptions in high-temp alloys.		P M K N S								

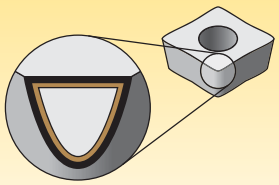


Reduce cycle times. High speed and feed capability. Long tool life. New multilayer coating provides better wear resistance.

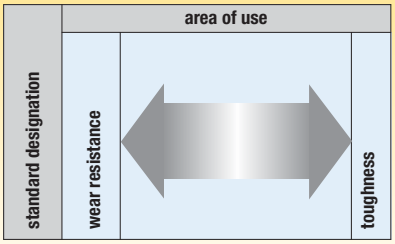


Grade

Coating		Grade Description	05	10	15	20	25	30	35	40	45
KC5410	C3–C4	**Composition:** PVD TiB_2 coating over a thermal deformation-resistant unalloyed substrate. **Application:** The KC5410 grade is designed for roughing, semi-finishing, and finishing of free machining (hypoeutectic <12,2% Si) aluminium, aluminium alloys, and magnesium alloys. Harder than TiN and TiAlN coatings, TiB_2 has an extremely smooth surface for improved surface friction, chip flow, and wear and built-up edge resistance. Unalloyed and fine-grained offering sharp edges and excellent edge integrity. Inserts with a ground periphery are polished before coating; moulded inserts have a light hone.									
KC9110	C3, C7	**Composition:** Specially engineered, cobalt-enriched carbide grade with thick K-MTCVD-TiCN coating layer, an Al_2O_3 layer of controlled grain size, and outer layers of TiCN and TiN for maximum abrasion and wear resistance for high-speed machining. **Application:** An excellent finishing to medium machining grade for a variety of workpiece materials including most steels, ferritic and martensitic stainless steels, and cast irons. A balanced combination of deformation resistance and edge toughness. The smooth coating resists built-up edge and microchipping. For rougher cutting, use the KC9125 grade.									
KC9125	C2–C3, C6–C7	**Composition:** A tough cobalt-enriched carbide grade with a newly designed multilayer K-MTCVD $TiCNAl_2O_3$-TiCN-TiN coating with superior interlayer adhesion. **Application:** General-purpose turning grade for most steels and ferritic and martensitic stainless steels. The substrate design ensures adequate deformation resistance along with excellent bulk toughness and insert edge strength. Coating layers offer wear resistance over a wide range of machining conditions and reduce frictional heat, minimise microchipping, and improve workpiece surface finishes. Performs well in moderately heavy roughing to semi-finishing cuts. Use the KC9110 grade for finishing cuts.									
KC9320	C3–C4	**Composition:** A proprietary specially toughened MTCVD-TICN and Al_2O_3 coating over a wear-resistant substrate. **Application:** KC9320 is specifically engineered to maximise coating adhesion and edge strength making this grade ideal in wet interrupted cutting of ductile and gray irons. It can be in a wide range of applications from finishing to roughing to maximise productivity wherever strength and reliability are needed.									
KY3500	C2	**Composition:** Pure silicon nitride grade. **Application:** Maximum toughness; used at high feed rates for rough machining of grey cast iron, including machining through interruptions.									
KD1400	C4	**Composition:** An ultra-fine-grain polycrystalline diamond (PCD) tip brazed onto a carbide substrate. **Application:** Designed for general-purpose turning of primarily non-ferrous materials. It can be applied over a wide range of continuous to interrupted cuts where superior surface finish is needed. Use on low to medium silicon-content aluminum alloys, non-metallics, copper, and brass- and zinc-based alloys. The ultra-fine-grain diamond particle size enables superior surface finishes while ensuring the best mechanical shock resistance of any PCD cutting tool.									



Reduce cycle times. High speed and feed capability. Long tool life. New multilayer coating provides better wear resistance.



Grade

Coating		Grade Description	05	10	15	20	25	30	35	40	45
KD1405	C4	**Composition:** A pure CVD deposited diamond sheet tool directly brazed to a carbide substrate. **Application:** The KD1405 grade is Kennametal's and the industry's most abrasion-resistant tool material for non-ferrous and non-metallic materials. The KD1405 grade inserts are not as tough as the KD1400 and KD1425 grades but can withstand moderate interruptions when turning and traditional face milling operations.	N	N							
KB1630	—	**Composition:** A high CBN content, PCBN tip brazed onto a carbide insert. **Application:** The KB1630 grade is designed for roughing to finishing in interrupted cuts on hardened steels (>45 HRC). It can also be applied on grey cast iron, chilled irons, high-chrome alloyed steels, and sintered powdered metals. The tipped PCBN insert is available in a wide range of insert styles including positive rake geometries that are ideally suited for boring applications.	K	K	K						
			S		S	S					
			H				H	H	H		
KB5625	C4, C8	**Composition:** A PVD TiAlN coating over a low content, PCBN tip brazed onto a carbide insert. **Application:** Designed for roughing to finishing of hardened steels (>45 HRC). Use on bearing steel, hot and cold work tool steels, high-speed steels, die steels, case hardened steels, carburised and nitrided irons, and some hard coatings.	H	H	H	H	H	H			

A2™ Cut-Off • High-Performance Tools to Maximise Productivity!

The A2 platform is the ideal system for parting operations on a wide variety of workpiece materials. It works well in smooth and interrupted cuts in both wet and dry operations. Now it is available in KCU25™ for superior edge toughness and excellent wear resistance.

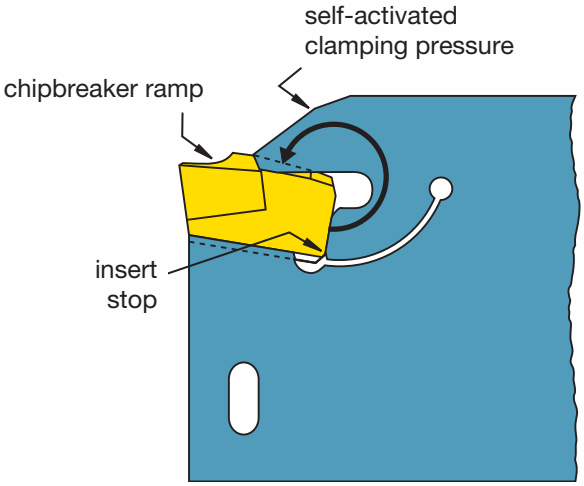
Features and Benefits

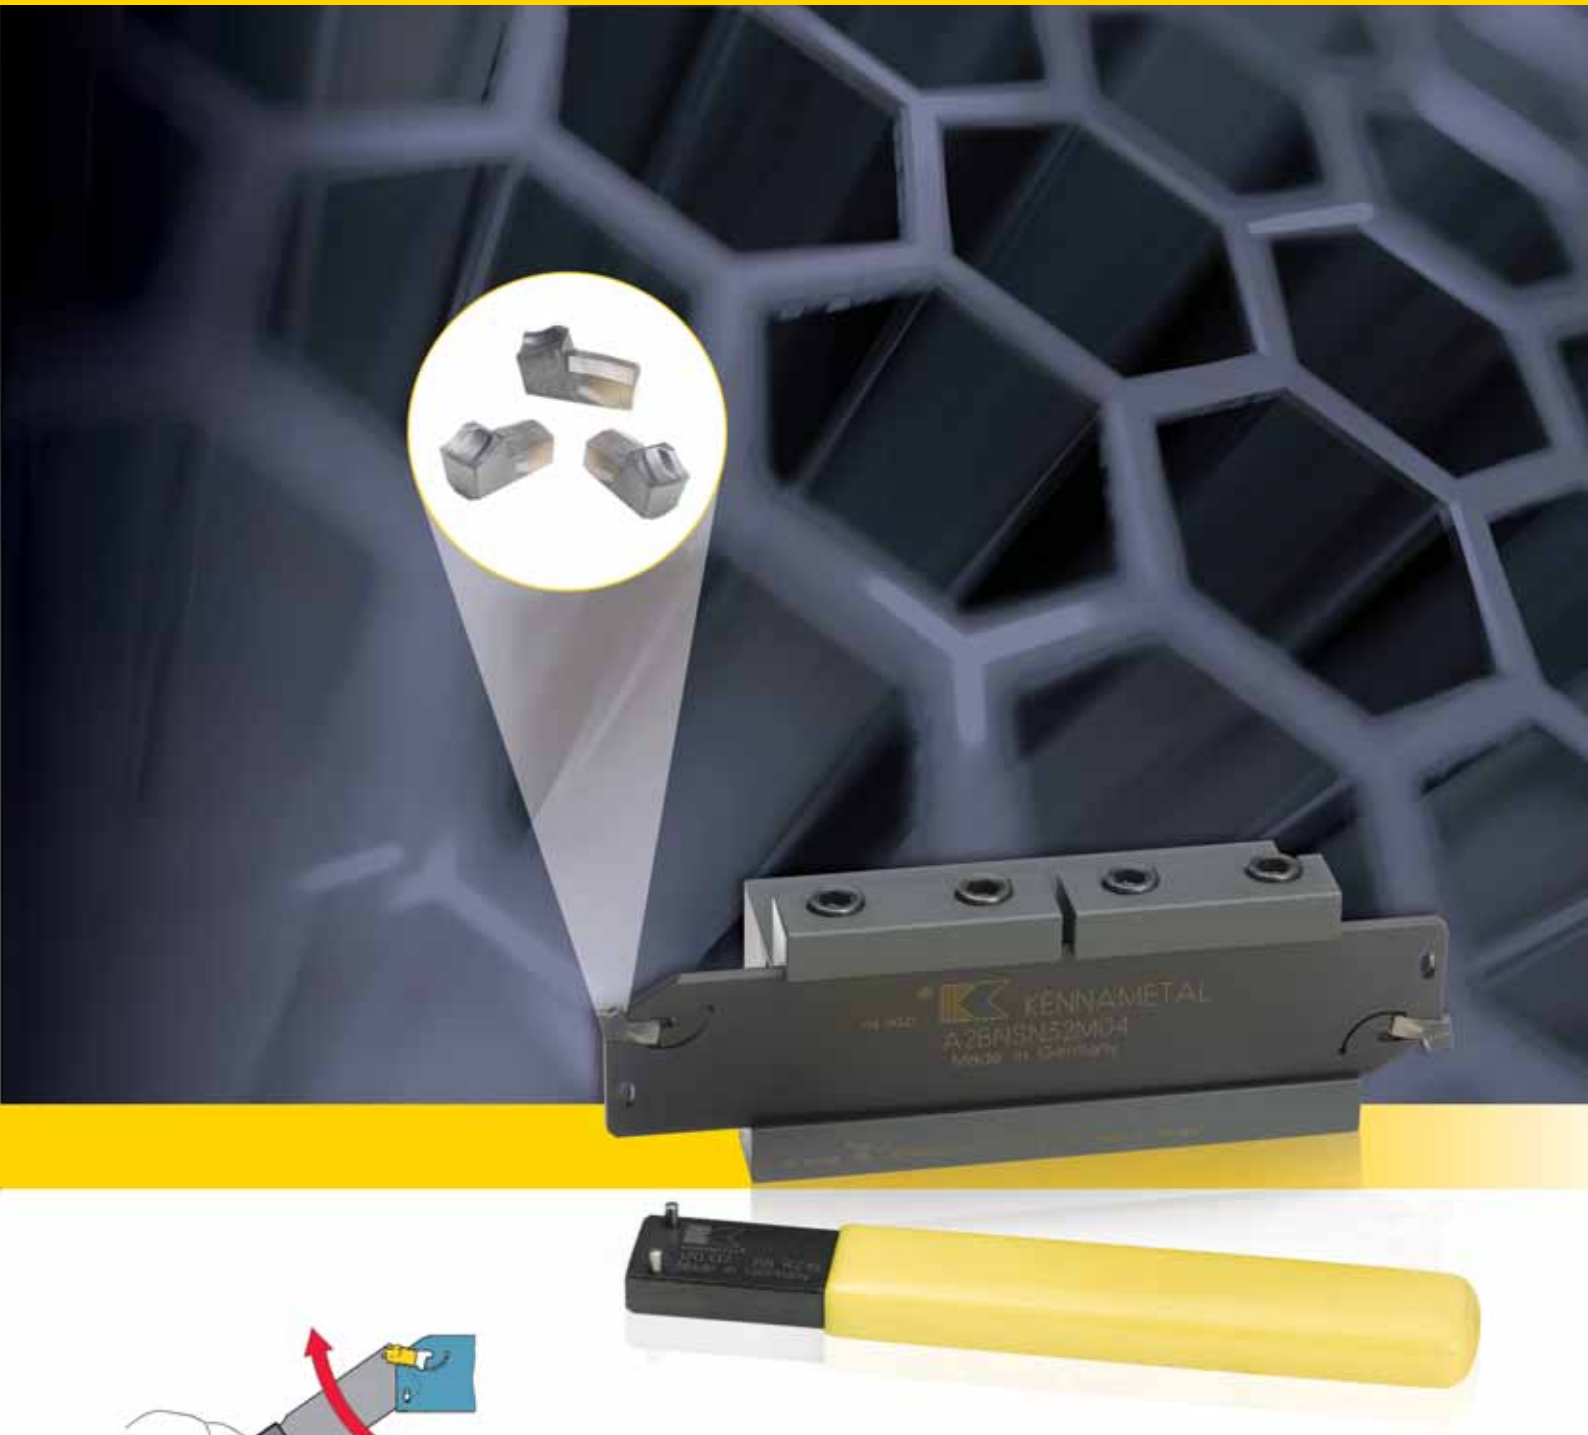
Innovative A2 Insert Design

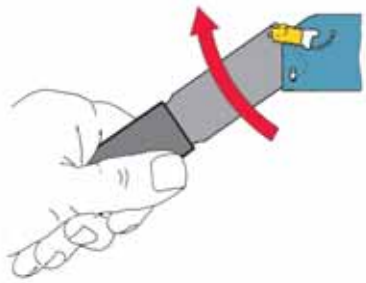
- V-prisms on both top and bottom enable higher clamping force to prevent insert movement, even when cutting at high-feed rates.
- The cutting edge has a molded-in chipbreaker ramp to direct chips away from the blade, extending blade life.
- Positive rake cutting action combined with Kennametal's high-performance PVD coatings result in superior tool life and chip control.

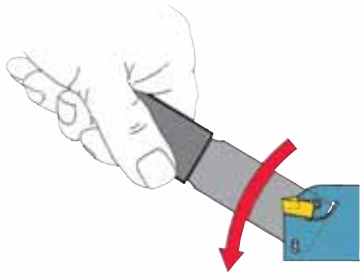
A2™ Insert Stop Design

- As cutting forces increase, clamping forces also increase for secure holding power.
- Fixed insert stop ensures solid seating with every index and delivers up to 30% longer life.
- Cutting height is accurately controlled for maximum reliability and performance on even small-diameter parts.





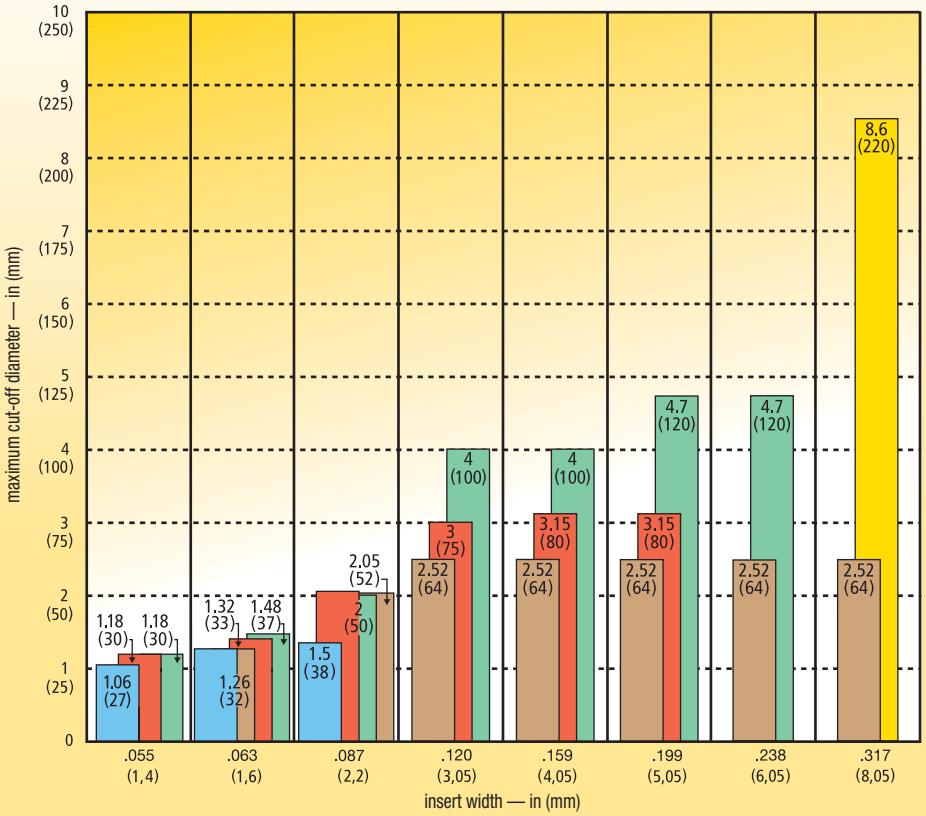




Quick and Easy Insert Indexing

- A convenient indexing wrench is available to minimise downtime by enabling fast removal and insertion without damage to the cutting edge.

Step 1 • Select insert width and holder type



blade height
19mm
26mm
32mm
52mm

Integral Shank Toolholders

What you need to know:

- Cut-off diameter.
- Part/machine requirements.

For required cut-off diameter, select insert width and holder type based on the part and machine requirement:

- To maximise rigidity, select the largest possible blade height or an integral shank toolholder.
- Diameters shown are for cut-off to centre. Maximum cut-off depth to a through-hole depth is one half of the diameter.
- To determine depth capability for cut-off to a through-hole on integral shank or reinforced blades, please refer to listing for that tool in this catalogue.

Toolholder Type

blade: (self-clamping)	**blade: (self-clamping, reinforced version)**	**toolholder: (with clamping screw)**
	Available in 26mm and 32mm heights	• Frequently used tool. • Two insert seats. • Deepest depth-of-cut capability.	• Efficient tooling solution with improved stability. • Limited depth-of-cut capability.	• Shank tool with the highest stability. • Limited depth of cut. • Single insert seat.

Step 2 • Select the insert lead angle

- Part type.
- Burr and centre stub considerations.
- Cut-off to centre or through hole.

	neutral (0°)	**right/left 6–10°**	**right/left 15–16°**
insert type			recommended application	• For cutting off solid workpieces. • Centre stub will form on cut-off part. • Eliminates lateral deflection. • Best for deep cut-off depths.	• For cutting off solid workpieces with reduced formation of centre stub. • For cut-off to a through-hole with reduced burr.	• For thin-walled workpieces. • For cutting off small diameter workpieces with minimal burr or centre stub.
tool life	Best tool life	Better tool life	Good tool life

Step 3 • Select chipbreaker style and feed rate

- Lead angle or neutral insert.
- Workpiece material.

-CL Cut-Off Low Feed	-CF Cut-Off Fine	-CM Cut-Off Medium	-CR Cut-Off Rough
• Excellent chip evacuation in low feed applications. • Offers improved stability and rigidity in difficult-to-control applications.	• Cut-off insert with precision ground cutting edge for low feeds. • Curved cutting edge.	• Cut-off insert with precision moulded cutting edge for medium feeds. • Stabilised straight cutting edge.	• Cut-off insert with precision moulded cutting edge for higher feed rates. • Curved cutting edge.

Chipbreaker Style and Feed Rates • mm/rev

insert type	P	M	K	N	S	H
	N-CR 0,08–0,3	N-CF 0,05–0,12	N-CM 0,05–0,2	N-CF 0,05–0,18	N-CF 0,04–0,10	CBN available upon request

Step 4 • Select grade and speed

Recommendations for Grade and Speed Selection • m/min

machining condition		workpiece material					
		P	M	K	N	S	H
Beyond™	high-performance, optimum conditions, higher speeds	KT315 395–625	KT315 230–560	KCU25/KC5025 265–560	KT315 600–1300	KCU25/KC5025 100–325	—
	first choice for general machining conditions	KCU25/KC5025 265–560	KCU25/KC5025 265–500	KCU25/KC5025 230–500	KCU25/KC5025 500–980	KCU25/KC5025 80–250	CBN available upon request
	unfavourable conditions, interrupted cuts, low speeds	KCU25/KC5025 200–325	KMF 135–265	KMF 80–265	KMF 200–600	KMF 30–80	—

Step 5 • Select insert and holder from catalogue page

NOTE: The insert seat size must match the seat size of your holder selection.

Example for A2 • Cut-Off

Material ..... low carbon steel
Workpiece diameter 27mm
Depth of cut 4mm

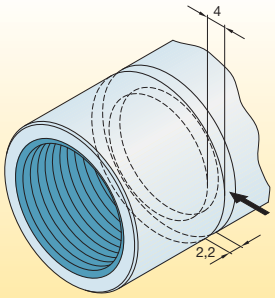
Recommendation

Insert A2022R10CF00
Grade KC5025
Cutting width 2,2mm
Insert seat size 2

Toolholder A2BNSN3202
Seat size 2

Congratulations!

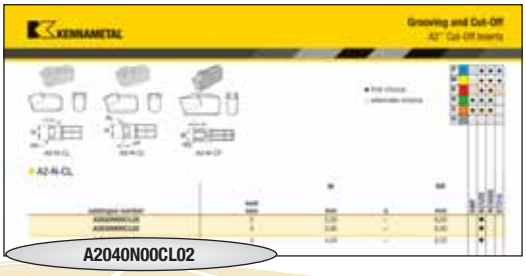
You have successfully maximised cut-off productivity by selecting the best insert, toolholder, grade, and cutting specifications for your application!



Speed: 140 m/min
Feed: 0,05 mm/rev

How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



A2 — Insert Type

A2 = Cut-Off

040 — Cutting Width

(in 1/10mm)

cutting width (mm)	pocket seat size
1,40	1B
1,60	01
2,20	02
3,05	03
4,05	04
5,05	05
6,05	06
8,05	08

N — Hand of Insert

N = Neutral
R = Right hand
L = Left hand

00 — Approach Angle of Main Cutting Edge

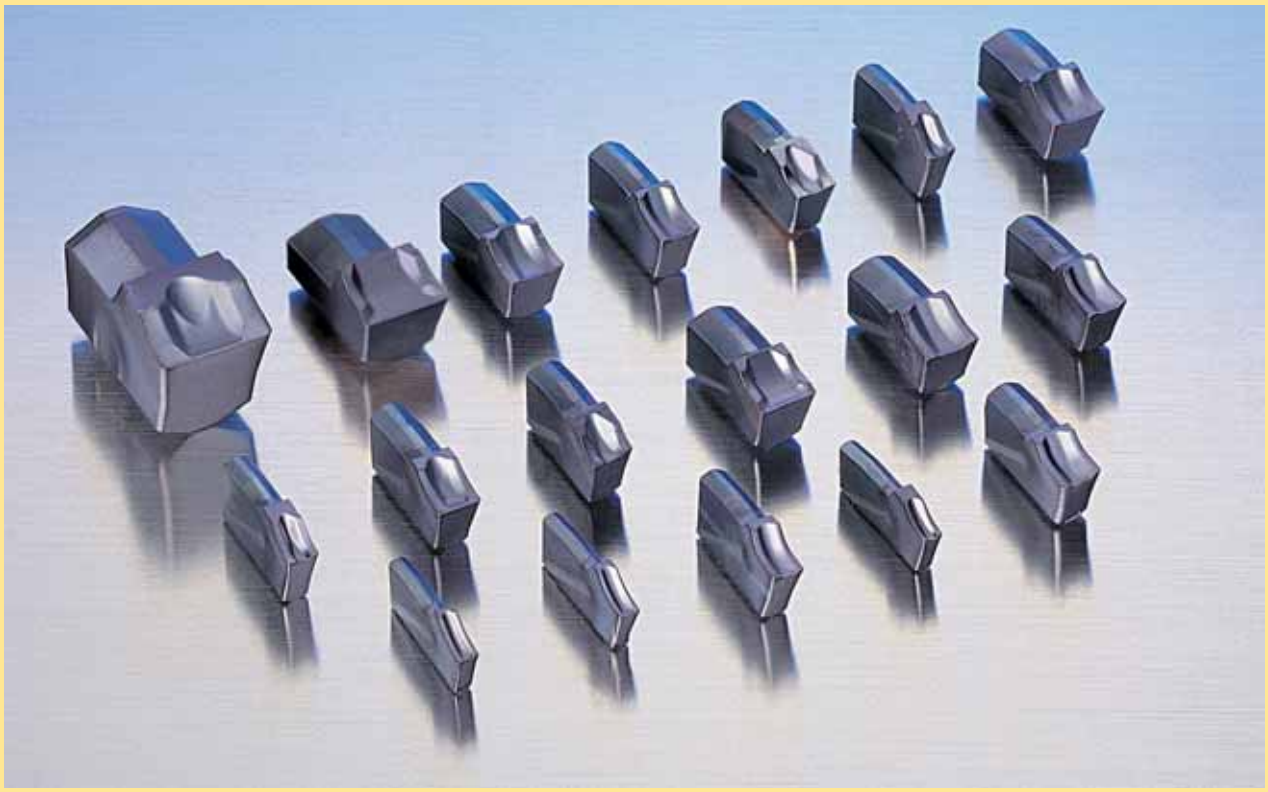
00 = neutral
06 = 6°
10 = 10°
15 = 15°
16 = 16°

CL — Chipbreaker

-CF
(**Cut-Off F**ine)
-CM
(**Cut-Off M**edium)
-CR
(**Cut-Off R**ough)
-CL
(**Cut-Off L**ow Feed)

02 — Corner Radius

	mm
00	0,0
01	0,1
02	0,2
03	0,3
04	0,4



With more than 140 insert line items in four grades and four chipbreaker styles, Kennametal offers a complete line of inserts designed to productively handle any cut-off application.

NOTE: Assembly wrench 170.137 and 170.130 must be ordered separately.
170.130 is designed for the larger cutting widths size 4–6. It has two small pins on one side — these are designed to remove the insert only. On the opposite side, there is a large pin and a rotating tang — these are designed to assemble the insert into the pocket. The large pin and tang are a better design for assembling the larger inserts because the smaller insertion pins will bend or break if used repeatedly for assembly.
170.137 is designed for the smaller widths below 4mm. It has only the two small pins that are used for both assembly and removal.
When using the smallest 1,4mm and 1,6mm cut-off blades, please note that the wrench can only be used to remove the insert.
The insert must be installed by tapping the edge of the insert with a plastic hammer.

Definitions and Guidelines

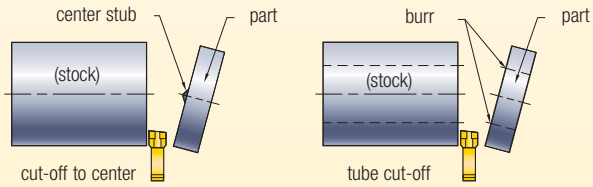
1. Width of cut (W) = width of the insert.

2. Lead angle = 0° (neutral); 4°, 5°, 12°, 18° (RH or LH).

Reduce burr of cut-off faces:

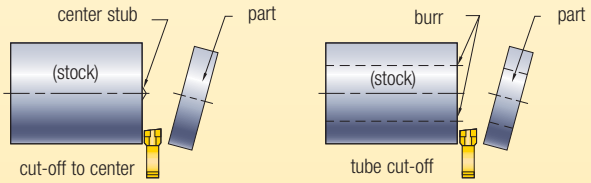
- Use lead angle-type inserts (Figures 1 and 2). Lead angle on a cut-off insert reduces the burr that remains on the part but decreases tool life and increases tool-side deflection and possibly cycle time.

Figure 1
Insert selection **left-hand lead**



Left-hand lead insert leaves center stub or burr on part and produces clean stock surface.

Figure 2
Insert selection **right-hand lead**

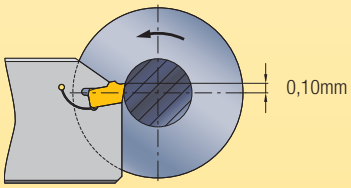


Right-hand lead insert leaves center stub or burr on stock and produces clean part surface.

- Check total height and maintain on center with part diameter.

- The cutting edge height should be within ±0,1mm to the center; recommended cutting position is 0,05mm above center.

Figure 3
Above center



- If 0° lead angle is mandatory, use the narrowest possible cut-off insert and blade. This will minimise the center stub or cut-off burr length. Decrease the feed rate to maximum 0,05mm or less at the point where diameter equals insert width.

- On tubing-type parts that require a chamfer on the ID, align ID chamfer tool with cut-off surface. This will enable the chamfering operation to actually separate the part from the bar (see Figure 4). Note the part may drop onto the chamfering bar, which, in this case, will act like a catcher for the part.

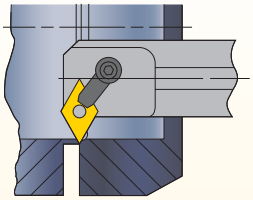


Figure 4
Internal chamfer line up

Improve surface finish of cut-off faces:

- Use insert with 0° lead angle.

- Increase coolant flow or improve application technique, as shown in Figure 5.

- Decrease the feed rate near the break-through point of the cut.

- Check that the grooving tool is set at the correct angle.

- Use blades with the greatest possible face height and smallest possible cutting width.

- Increase the speed.

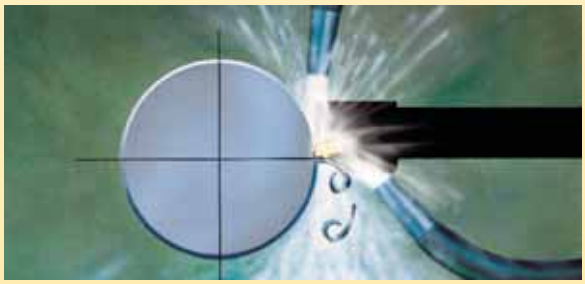

Figure 5
Preferred method for applying coolant

- Mount cut-off tool upside down. This enables gravity to remove chips and avoid cutting the chips twice. Another benefit of mounting the tool upside down is preventing chips from wedging between the tool insert and the groove side walls, which galls the side wall surfaces.

A3™ Deep Grooving Is the Best Choice for High Productivity — with Outstanding Application Flexibility!

Primary Application

The A3 System is designed specifically for deep grooving operations. The A3 platform enables customers to reach deeper depths while maintaining chip control and tool rigidity.

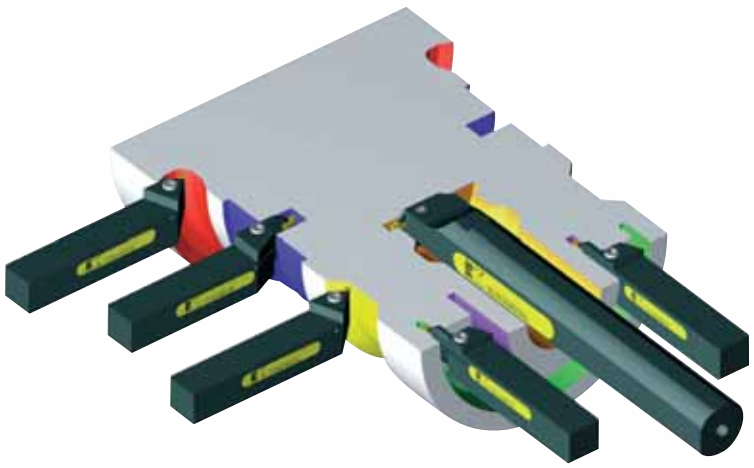
Features and Benefits

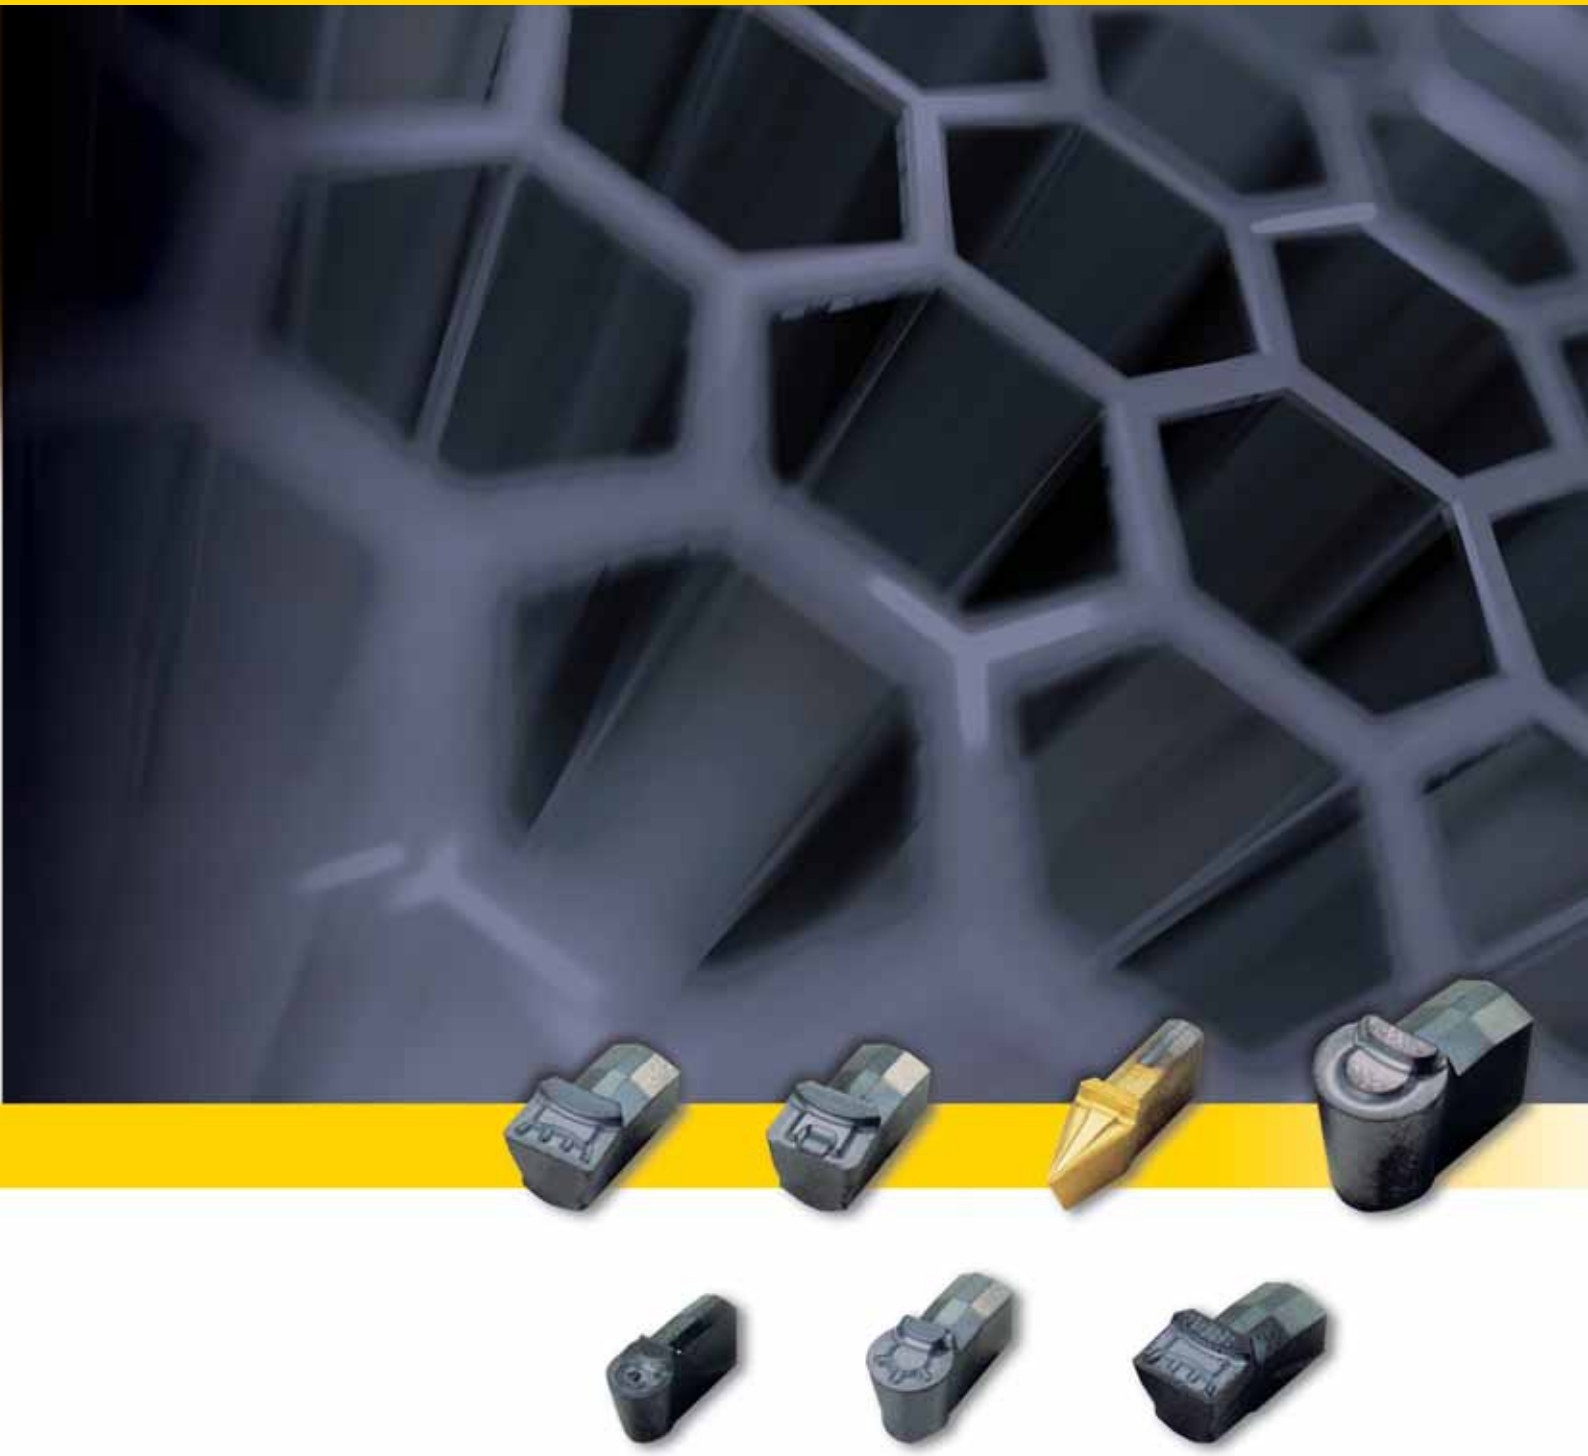
Performance

- One insert performs:
  - O.D. operations
  - I.D. operations
  - Face grooving operations
- In addition, the A3 system's performance is enhanced by:
  - Beyond™ CVD grades
  - The Beyond Tooling Selection System

Compatibility

- A3 deep grooving tooling is compatible with square shank, KM™, and Kennametal Capto® platforms.





Step 1 • Select system based on the groove depth required

What you need to know:

- Groove depth, width, and profile.
- Material to be machined.
- Application to be performed (face, O.D., or I.D. grooving).
- Toolholder requirements (e.g., KM™, square shank, right/left).

Top Notch™

Grooving
For grooving depth ≤1,5x grooving width, see Top Notch grooving, page D112.

A3™ or A4™

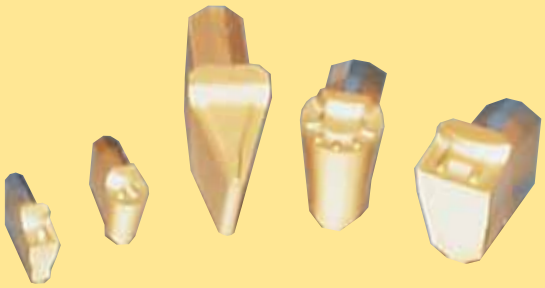
Deep Grooving
For grooving depth ≥1,5x grooving width, proceed to Step 2 for the A3 Deep Grooving program or see A4 Grooving and Turning program on page D62.

A3 Deep Grooving for Deep Internal, External, and Face Grooving Applications

System Capabilities

groove	min	max
width	2,25mm	10,05mm
depth	—	32mm

Face grooving diameter range 25mm to ∞



Step 2 • Select toolholder based on the application

NOTE: Toolholders are available as conventional square shank versions as well as quick-change versions. Please select equal seat sizes for the insert and the toolholder.

I.D. grooving applications.....see page D44
Face grooving with integral square shank toolholders .....see page D38
O.D. grooving with integral square shank toolholders .....see page D36
Face and O.D. grooving with modular toolholders .....see pages D48–D57

Step 3 • Select chipbreaker style and feed rate

DF — Deep Finishing	DM — Deep Medium	DR — Deep Roughing

(continued)

(continued)

Chipbreaker and Feed Rates • mm/rev

workpiece material and application	P	M	K	N	S	H
 deep O.D. grooving	DM 0,05–0,25	DF 0,05–0,15	DM 0,05–0,23	DF 0,05–0,25	DF 0,05–0,13	CBN tip on request 0,05–0,10
	DF 0,05–0,18	—	—	—	—	—
 face and I.D. grooving	DF 0,05–0,15	DF 0,05–0,13	DM 0,05–0,18	DF 0,05–0,18	DF 0,04–0,10	CBN tip on request 0,05–0,10
	—	—	DF 0,05–0,15	—	—	—
 profiling*	DR 0,10–0,40	DF 0,05–0,25	DR 0,10–0,40	DF 0,05–0,25	DF 0,05–0,25	CBN tip on request 0,05–0,10
	DF 0,05–0,25	—	—	—	—	—

*For profiling, the maximum recommended depth of cut is 1/3 the insert width.

NOTE: Use minimum feed rates for narrower grooves and heavier feed rates for wider grooves. Increase feed rate as operation allows.

Step 4 • Select grade and speed

Recommendations for Grade and Speed Selection • m/min

machining condition	workpiece material P	M	K	N	S	H
high-performance for optimal conditions (clean cuts, good machine condition, higher speed capability)	KT315 330–750	KT315 230–560	KCU10/KC5010 230–720	KCU10/KC5010 590–2800	KCU10/KC5010 35–360	KB5625* 390–500
	KC9110 360–720	—	—	—	—	—
general purpose (first choice for general machining)	KCU10/KC5010 200–525	KCU10/KC5010 160–450	KCU25/KC5025 230–500	KCU10/KC5010 500–2400	KCU25/KC5025 35–200	KB5625* 260–425
unfavourable conditions (roughing, poor machine condition, interrupted cuts, low speed)	KCU25/KC5025 160–360	KCU25/KC5025 130–300	KCU25/KC5025 80–450	KCU25/KC5025 200–1000	KCU25/KC5025 35–150	KCU10/KC5010 35–115
	—	—	—	KMF 200–650	KMF 35–100	—

*NOTE: PCBN-tipped inserts in KB5625 are available on request.

Step 5 • Select insert and holder from catalogue page

NOTE: The insert seat size and cutting width must match the seat size and cutting width of your toolholder selection.

Example for A3 • Deep Grooving

Material ..... low-alloyed steel
Groove depth 12mm
Groove width 6,35mm
Smooth cut

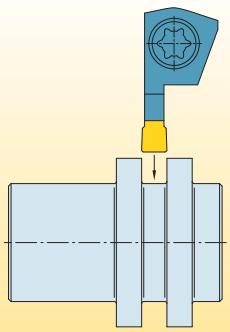
Recommendation

Insert A3G250I06P1DF
Grade KC5010
Insert width 6,35mm
Insert seat size 6

Toolholder A3SML2525M0616
Grooving depth 16mm
Seat size 2

Congratulations!

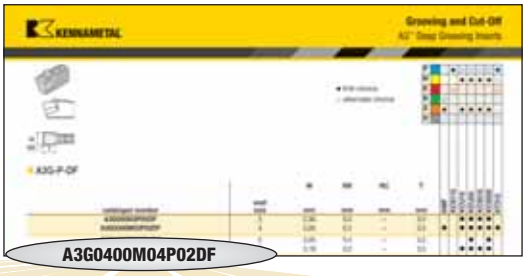
You have successfully maximised your productivity by selecting the best A3 insert geometry, grade, and cutting specifications for your application!



Speed: 180 m/min
Feed: 0,15 mm/rev

How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



A3	G	0400	M	04	P	02	DF
Type of Program	Insert Style	Groove Width	Units	Insert Size	Insert Tolerance	Corner Radii	Chipbreaker
A3 = Deep Grooving	**G** = Square **R** = Full radius **V** = V-style 35º	Expressed in 1/100mm 0000 for V shape	**M** = Metric	03 (*)3S 04 (*)4S 05 06 08 10	**P** = Precision ground grooving width tolerance: ±.001" (0,025mm) **U** = Utility moulded grooving width tolerance: 3,05-4,05: +0,15mm / -0 5,05-10,05: +0,15mm / -0	**metric** 01 02 04 08 12 16 **full radius = 00**	**DF** = Deep Finishing **DM** = Deep Medium **DR** = Deep Roughing

(*) 3S/4S designates a small size insert for face grooving of small diameters.

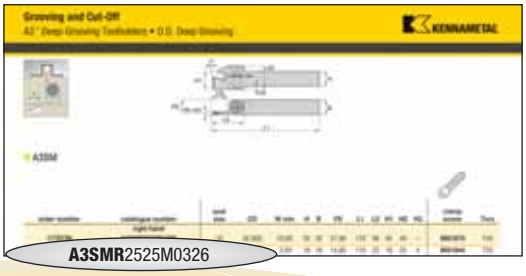
How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



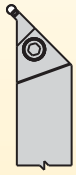
A3
Type of Program

A3 = Screw Clamp Holder

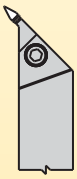
S
Tool Style

S = Straight

D = 45° profiling



P = 117,5° V-profiling
U = 93° V-profiling

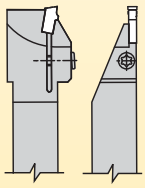


M
Support Type

S = Standard support for a range of groove widths and straight clearance for unlimited workpiece diameters

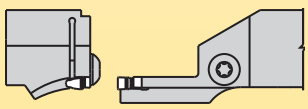
M = Maximum support for specific groove widths and straight clearance for unlimited workpiece diameters

C = Reinforced maximum support width circular clearance



A = Inboard sweep face grooving toolholder

B = Outboard sweep face grooving toolholder



R
Hand of Tool

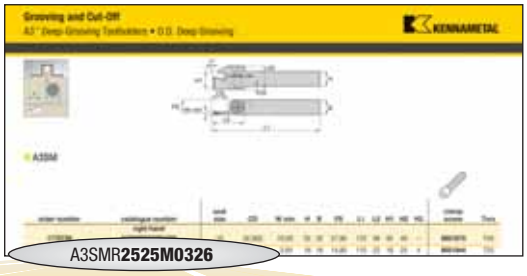
R = Right

L = Left

N = Neutral

NOTE: A2™ inserts can be used in A3 toolholders with equal seat sizes.

By referencing this easy-to-use guide, you can identify the correct product to meet your needs.



2525M

Shank Size

metric:
Height x width in mm, letter indicates tool length according to ISO

inch:
For square shanks, the number indicates the height and width in 1/16" increments (rectangular: 1st digit = width in 1/8" increments, 2nd digit = height in 1/4" increments)

metric tool length (mm)

J = 110 **K** = 125 **X** = Other length
M = 150
P = 170

03

Seat Size

pocket seat size	nominal cutting width (mm)
03/3S	3,05
04/4S	4,05
05	5,05
06	6,05
08	8,05
10	10,05

26

Max Cutting Depth

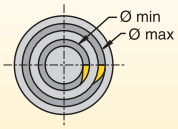
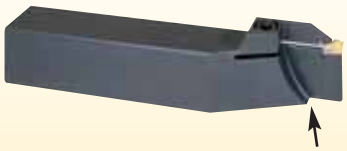
Face Grooving Diameter *(optional)*

Ø min – Ø max

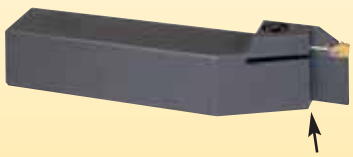


Screw-Clamping Holder Options



Example: **A3SCR-1603-26**

circular clearance



Example: **A3SSR-1605-26**

straight clearance

Both A2™ and A3 inserts are designed to fit all A3-style holders.

C-style reinforced maximum support toolholder with circular clearance:
- Provides maximum support for cut-off operations.
- For cut-off to center or small through-hole applications.
- Ideal for A3 deep grooving operations as well.

S-style standard support toolholder with straight clearance:
- Provides maximum flexibility.
- Unlimited diameter capability for cut-off to through-hole applications.
- Narrower support blade width allows full insert width flexibility for A3 deep grooving operations.
- Straight clearance is also available in selected M-style maximum support integral shank and modular toolholders.

NOTE: Seat size 4 inserts can be used in seat size 3 and 4 toolholders, within cutting width range.
Seat size 6 inserts can be used in seat size 5 and 6 toolholders, within cutting width range.
Seat size 8 inserts can be used in seat size 8 and 10 toolholders, within cutting width range.
Use the larger seat size toolholder for optimal performance.

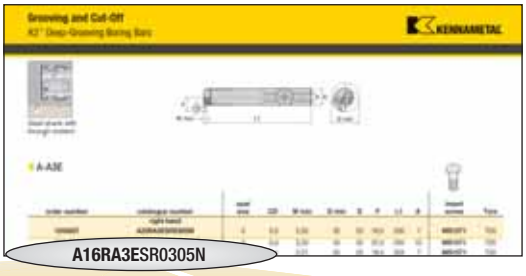
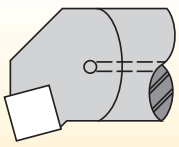
How Do Catalogue Numbers Work?

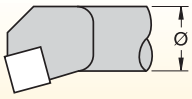
Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



A
Steel Bar with Coolant



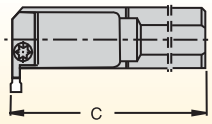
16
Bar Diameter



metric bars:
Bar diameter in millimetres

inch bars:
A two-digit number which indicates the bar diameter in 1/16" increments.

R
Bar Length

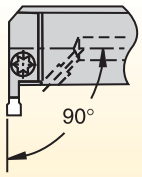


metric bars:
R = 200mm
S = 250mm
T = 300mm

inch bars:
R = 8"
S = 10"
T = 12"

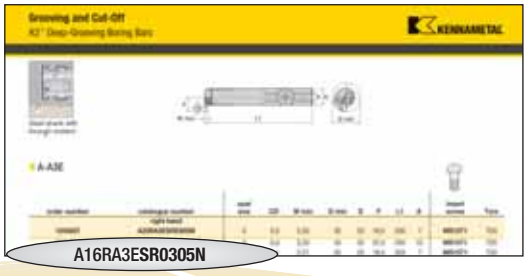
A3
A3 System

E
Tool Style



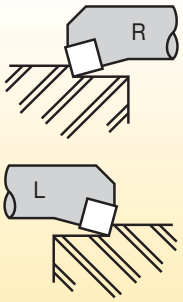
E = End mounted (90°)

By referencing this easy-to-use guide, you can identify the correct product to meet your needs.

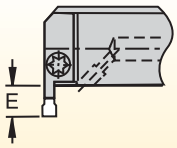


S	R	03	05	N
Support Type	Hand of Tool	Seat Size	Grooving Depth in mm	Tool Units

S = Standard support for a wide range of groove widths



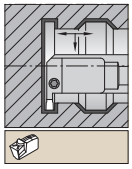
pocket seat size	cutting width (mm)
03	2,25–3,05
04	3,05–4,05
05	4,05–5,05
06	5,05–6,05
08	6,05–8,05



conversions:

mm		inch
5mm	=	.20"
8mm	=	.32"
10mm	=	.39"
12mm	=	.47"
15mm	=	.59"

M = Metric
N = Inch



Steel shank with through coolant.

A2-CL Geometry with Beyond™ Insert Technology

Maximise your cut-off productivity.

A2-CL Geometry

- Beyond grades enable optimum performance and extended tool life.
- Tighter chipbreaker capability when machining low carbon steel.
- Excellent chip evacuation in low-feed applications.
- Provides an expansion to existing -CR, -CM, and -CF geometries.
- Offers improved stability and rigidity.

7	KM KGMS Cutting Unit	D55–D56

By customer demand, Kennametal Inc. and Sandvik® Coromant have entered into an agreement that allows both companies to manufacture, market, and sell KM and Coromant Capto products worldwide. Using the trademark Kennametal Capto, we make available a variety of leading and innovative Kennametal tooling designs utilising the Coromant Capto coupling.

The manufacture and marketing of Kennametal Capto products and the use of the “Capto” trademark are in accordance with a license granted from Sandvik.

By referencing this easy-to-use guide, you can identify the correct product to meet your needs.

Kennametal™ Tools for Railways and Wheel Machining

Kennametal offers a complete line of tooling for wheel and axle maintenance in railroad shops. All tools incorporate the latest in tooling technology for maximum metal removal and higher productivity. All tools are proven performers in actual use over extended periods of time, under a wide range of operating conditions. Standard off-the-shelf inserts and fewer pieces of hardware reduce inventory and operating costs. Included in this range are tools for reconditioning mounted wheel sets, wheel boring, wheel truing, axle turning, and journal burnishing.

Visit **www.kennametal.com** or contact your local Authorised Kennametal Distributor.

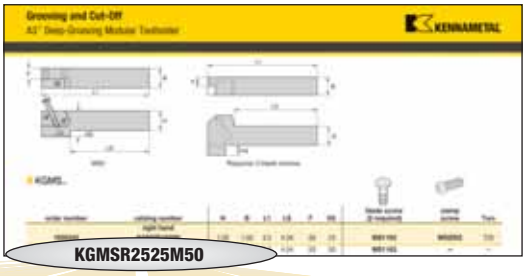
How Do Catalogue Numbers Work?

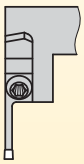
Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

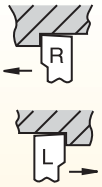


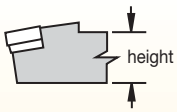
KGM	S	R	25	25	M	50
Grooving Modular	Tool Style	Hand of Tool	Shank Dimensions	Blade Size	Tool Length	Blade Size

S

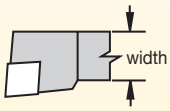
E







shank height in millimetres



shank width in millimetres

square shanks:
The number indicates the toolholder cross section in 1/16" increments.

rectangular shanks:
The first digit indicates the number of 1/8" increments of width and the second digit indicates the number of 1/4" increments of height.

M = 150mm
N = Inch
P = 170mm

length over insert in a support blade with a 12,5mm D dimension according to ISO

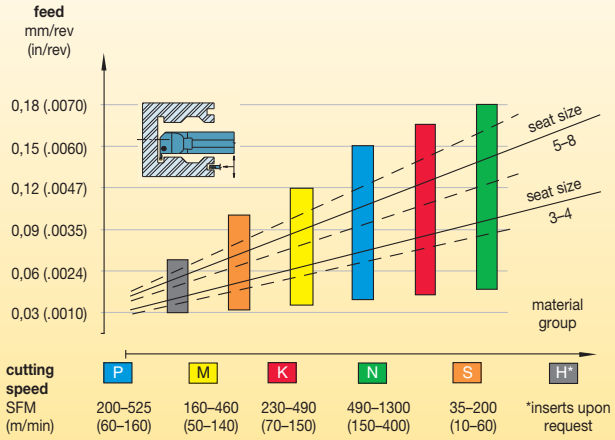
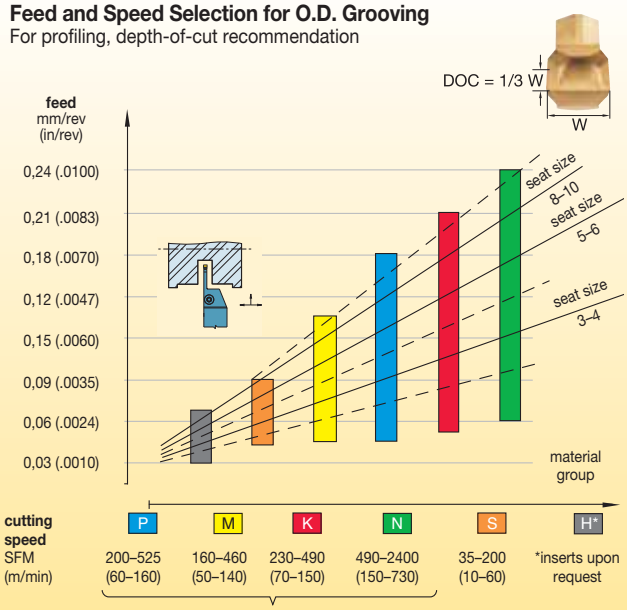
Application Guidelines

Feed and Speed Selection for I.D. and Face Grooving



Feed and Speed Selection for O.D. Grooving

For profiling, depth-of-cut recommendation

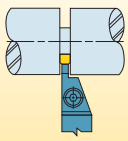


For radial grooving under stable conditions, feed can be increased by up to 50%.

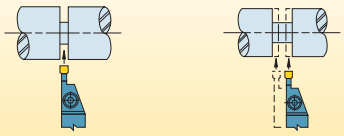
Tool Application Guidelines

- Always use good general machining practices.
- Make the machine and workpiece setup as rigid as possible.
- Integral shank toolholders offer the best rigidity. They should be your first toolholder choice, when possible.
- Use the toolholder with the shortest possible depth of cut for the application ("CD" dimension).
- When changing inserts, make sure the new insert locates securely against the toolholder's positive stop.
- Never tighten the clamping screw without an insert in the pocket.
- Toolholder projection out of the tool block should be as short as possible.
- Inserts should cut as close to center as possible.
- Dwell time in bottom of groove should be less than three revolutions.
- Recommended cutting speeds and feeds are a starting point. Adjust, as necessary, for optimum tool life and chip control.

Deep Grooves

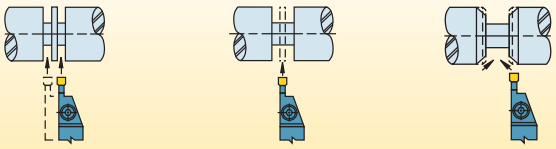


Deep Grooves Slightly Wider than the Tool



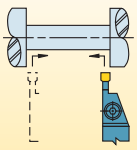
1. Plunge the center of the groove.
2. Plunge each side of the groove to get the specified width. Use a slower feed rate when cutting groove sides.

Extra Wide Deep Grooves



1. Plunge out both sides of the groove width.
2. Plunge center area to remove web of remaining material.
3. Plunge both sides of groove at the required angle, using approximately one-half the width of the grooving tool for maximum width of cut.

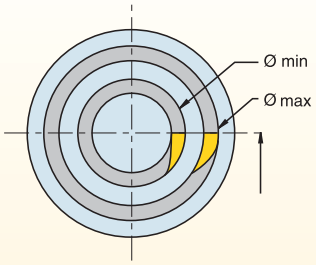
Finish Turning of the Groove/Light Profiling



1. Follow recommendations explained above.
2. To avoid insert chipping and to achieve groove wall perpendicularity, follow the tool path shown here.
3. Use the lightest depth of cut possible while still maintaining good chip breaking, tool life, and surface finish.

Grooving Tool Failure and Solution Guide

Face Grooving Application Guidelines



Tool Selection

- When selecting the toolholder, always start at the largest diameter possible and work toward the smaller diameter. This will allow the strongest tool to be used.

Cutting the First Groove

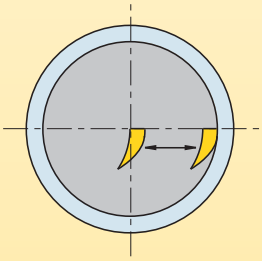
- The outside diameter of the first groove must be between the diameter minimum and diameter maximum capability of the face grooving tool (see illustration above). This creates clearance for the toolholder.

Chip Control

- Adjust speed and feed for good chip control and evacuation from the groove. Chip compaction can cause poor surface finish, tool breakage, and reduced tool life.

Tool Setting

- The tool should be set as close to the center as possible to avoid extreme formation of burrs.
- Align the cutting edge square to the workpiece.



Widening a Face Groove

- After the first groove has been cut, the groove width can be widened in either direction using the same tool. The best practice is to work from the O.D. to the I.D.

Practical Solutions to Grooving Problems

problem	remedy
burr	1. Verify tool center height. 2. Use sharp tools (index more often). 3. Use positive rake PVD coated insert. 4. Use correct grade for workpiece material. 5. Use correct geometry (e.g., positive rake for workhardening material). 6. Change tool path.
poor surface finish	1. Increase speed. 2. Use sharp tools (index more often). 3. Dwell time in bottom 1–3 revolutions (max). 4. Use proper chip control geometry. 5. Increase coolant flow. 6. Verify proper setup (overhang, shank size). 7. Use correct geometry (e.g., positive rake for workhardening material).
groove bottom not flat	1. Use sharp tools (index more often). 2. Dwell time in bottom 1–3 revolutions (max). 3. Reduce tool overhang (increase rigidity). 4. Reduce feed rate at groove bottom. 5. Use a wider insert. 6. Verify tool center height.
poor chip control	1. Use sharp tools (index more often). 2. Increase coolant concentration. 3. Adjust feed rate (usually increase first).
chatter	1. Reduce tool and workpiece overhang. 2. Adjust speed (usually increase first). 3. Adjust feed (usually increase first). 4. Verify tool center height.
insert chipping	1. Use correct grade for workpiece material. 2. Increase speed. 3. Reduce feed. 4. Use a stronger grade. 5. Increase tool and setup rigidity.
built-up edge	1. Use positive rake PVD coated insert. 2. Increase speed. 3. Reduce feed. 4. Increase coolant flow/concentration. 5. Use cermets.
side walls not straight	1. Check tool alignment for square. 2. Reduce workpiece and tool overhang. 3. Use sharp inserts (index more often).

A4™ Tooling and Beyond™ Inserts for All Your O.D. and I.D. Applications

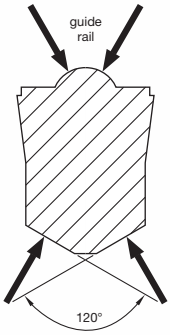
Primary Application

Choose A4 tooling for turning, facing, grooving, face grooving, and cut-off applications across a broad range of workpiece materials. The unique clamping system and versatile insert geometry deliver the highest metal removal rates in the industry.

Features and Benefits

A4 Grooving and Turning System

- One tool for turning, facing, grooving, face-grooving, and cut-off in O.D. and I.D. applications means exceptionally fast cycle times, no turret indexes!
- Extra-long clamping area, ground 120° bottom prism seating surface, and an exclusive top guide rail combine to deliver unsurpassed grooving and side-turning stability!
- Precise insert positioning is ensured for accurate cuts!
- Rigid clamping securely locks insert in place through the toughest cuts.
- Versatile design enables one system to handle O.D. and I.D. grooving, face grooving, back turning, undercutting, and even threading operations.
- Chip control inserts provide excellent chip evacuation in grooving, and offer better chip control in multidirectional turning.



A4 Chipbreakers

GUP Chipbreaker

The A4™ System Increases Productivity

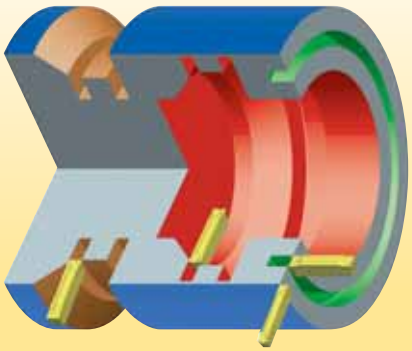
- Covers multiple applications.
- Reduces tool cost.
- Minimises machining time.

To learn more, ***scan here****.*
For instructions on how to scan, please see page xxix.

Step 1 • Select A4 size for grooving and turning application

What you need to know:

- Groove depth, width, and profile.
- Material being machined.
- Application to be performed (O.D. and I.D. grooving, turning, face grooving, and cut-off).



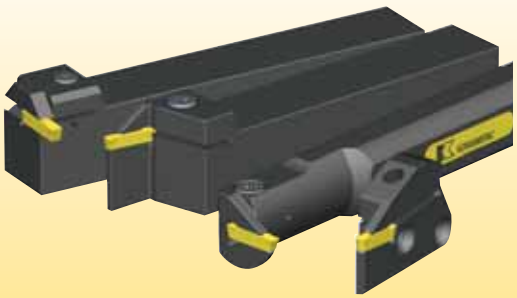
General Recommendation to Select the Insert Size

for workpiece diameters	insert seat size
<25mm	3
25–50mm	4
>50mm	5–10

Step 2 • Select toolholder based on the application

	conventional toolholders	modular blades
O.D. grooving, cut-off, and turning	page D82	page D94
face grooving	page D85	page D95
I.D. grooving, cut-off, and turning	page D87	—

NOTE: Insert seat size must match the seat size of the toolholder.



Step 3 • Select chipbreaker style and feed rate

Choose Chipbreaker Based on Material Type

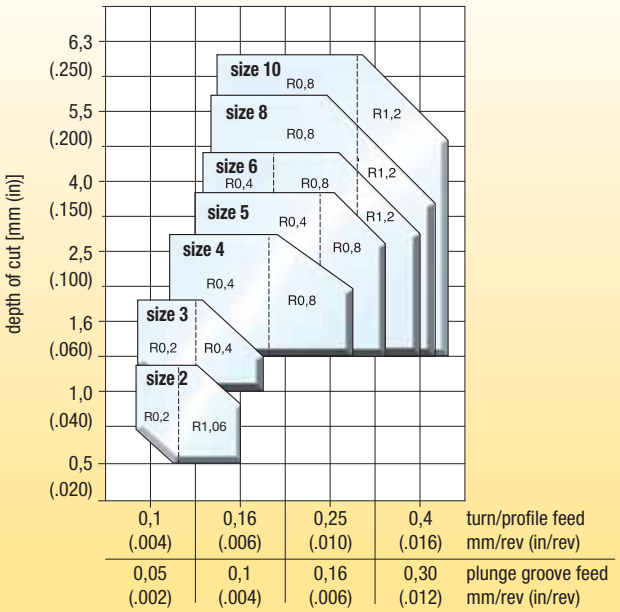
P	M	N	S	H
GMN	GUP/GMP	GUP/GMP precision ground (-E for KD 1405)	GUP/GMP precision ground	GMN

NOTE: Precision ground A4-P-GMN inserts can be applied on all material groups for inch-width grooving.

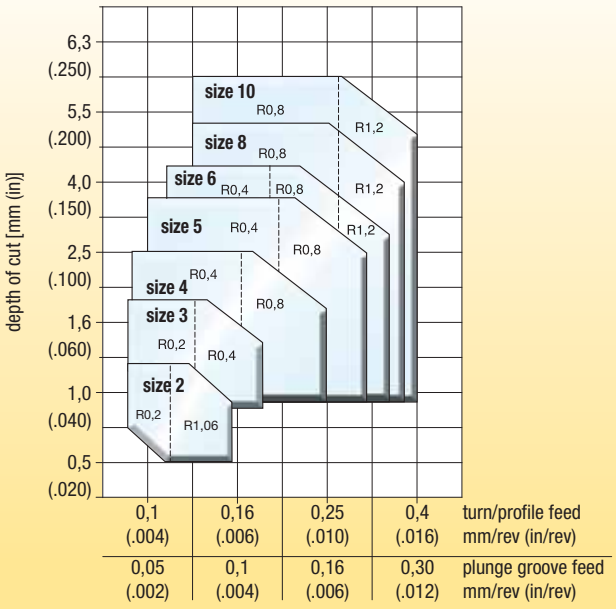
Depth of Cut and Feed Guidelines

square inserts (A4G...)			full radius inserts (A4R...)	
GMN chipbreaker	**GMP chipbreaker**	**GUP chipbreaker**	**GMN chipbreaker**	**GMP chipbreaker**
• Groove and turn moulded and precision ground inserts. • Stable cutting edge. • Available in metric and inch widths.	• Groove and turn inserts. • Available in moulded and precision-ground styles. • Positive rake angle. • Available in metric widths only.	• Groove and turn inserts in new Beyond™ grades. • Available in moulded and precision-ground styles. • Positive rake angle with enhanced chip control. • Available in metric widths only.	• Maximum turning and profiling depth of cut equals half the insert width. • The maximum turn and profile feed rate depends on the material to be machined and the depth of cut. For easy-to-machine materials, feed can be increased up to 1,5 times.	• Groove and turn inserts. • Available in moulded and precision-ground styles. • Positive rake angle. • Available in metric widths only.

GMN



GMP/GUP



NOTE: Select feed based on nose radius.
Diagram explanation: R0,2 - R = corner radius; 0,2 = 0,2mm radius.

Step 4 • Select grade and speed

Recommended Beyond™ Grades

cutting condition		P	M	K	N	S	H
heavily interrupted cut		KCU25/KC5025	KCU25/KC5025	KC9125	KCU25/KC5025	KCU25/KC5025	—
lightly interrupted cut		KCP25/KC9125/ KC9125/KCU25/ KC5025	KCU25/KC5025	KC9125	KCU25/KC5025	KCU25/KC5025	—
varying depth of cut, casting, or forging skin		KCU10/KC5010	KCU10/KC5010	KC9110	KCU10/KC5010/ KD1405	K313/KU10/ KCU10/KC5010	KCU10/KC5010
smooth cut, pre-turned surface		KT315/KCP10/ KC9110	KT315	KC9110	KCU10/KC5010/ KD1405	K313/KU10/ KCU10/KC5010	KCU10/KC5010

Recommended Beyond Cutting Speeds

Steel — speed — m/min (SFM) — starting conditions ◇

material group	grade	60	120	185	245	300	360	m/min
P	KCU10		◇					120
	KCP10				◇			275
	KCP25			◇				220
	KC5025		◇					120
	KC9110				◇			250
	KC9125			◇				200
	KT315**					◇		260

**KT315 is an alternative choice for steel; primarily available in the GMP chipbreaker.

Stainless Steel — speed — m/min (SFM) — starting conditions ◇

material group	grade	45	90	140	185	230	275	m/min
M	KU10	◇						55
	KCU10			◇				140
	KCU25		◇					110
	KC5010			◇				135
	KC5025		◇					105
	KT315				◇			170

Non-Ferrous Metals — speed — m/min (SFM) — starting conditions ◇

material group	grade	150	300	460	610	760	900	m/min
N	KC5025		◇					365
	KC5010			◇				455
	KD1405***				◇			610

***Recommended for high-silicon aluminium alloys and abrasive nonmetallics.

High-Temperature Alloys — speed — m/min (SFM) — starting conditions ◇

material group	grade	15	35	55	75	90	140	m/min
S	KU10	◇						22
	KCU10				◇			65
	KCU25			◇				50
	KC5010				◇			60
	KC5025			◇				45
	KT315		◇					30

Hardened Materials — speed — m/min (SFM) — starting conditions ◇

material group	grade	15	35	55	75	95	115	m/min
H	KC5010		◇					30

Step 5 • Select insert and holder from catalogue page

NOTE: The insert seat size must match the seat size of your toolholder selection.

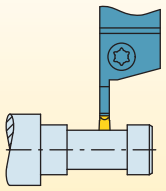
Example for A4 — Groove and Turn

Material.....low-alloyed steel
Workpiece O.D. 38mm
Groove depth 12mm
Groove width 22mm
Lightly interrupted cut

Recommendation

Insert A4G0405M04U08GMN
Grade KC9125
Insert width 4,05mm
Insert seat size 4

Toolholder A4SMR160417
Grooving depth..... 17mm
Seat size 4



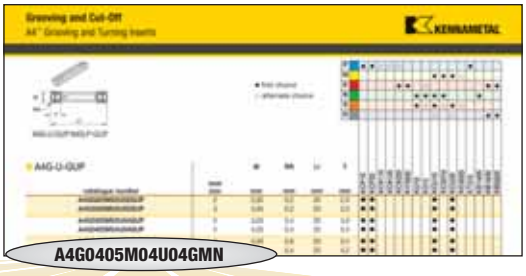
Speed: 200 m/min
Feed: 0,25 mm/rev
Plunge feed: 0,14 mm/rev

Congratulations!

You have successfully maximised your productivity by selecting the best A4 insert geometry, grade, and cutting specifications for your application!

How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



Grooving and Turning Inserts

A4	G	0405	M	04	U	04	GMN
Tooling System	Insert Type	Groove Width	Unit of Measurement for Grooving Width	Seat Size	Insert Tolerance	Corner Radii	Chipbreaker Type/Edge Prep
A4 = Grooving and Turning	**G** = Square **R** = Full radius **C** = Cut-off	Expressed in 1/100mm	**M** = Metric				

pocket seat size	cutting width (mm)
02	2,00–2,62
2B	2,39–2,62
03	3,0–3,05
04	4,0–4,05
05	5,0–5,05
06	6,0–6,05
08	8,0–8,05
10	10,0–10,05
2S	2,00–2,62
3S	3,00–3,05
4S	4,00–4,05
5S	5,00–5,05

P = Precision ground grooving width tolerance: ± 0,025mm (.001")

U = Utility moulded grooving width tolerance:

3,05-4,05: $\frac{+0{,}15\text{mm}}{-0}$

5,05-10,05: $\frac{+0{,}25\text{mm}}{-0}$

metric
01 = 0,1
02 = 0,2
04 = 0,4
08 = 0,8
12 = 1,2
full radius = 00

GMN = Grooving and turning medium machining stable cutting edge

GMP = Grooving and turning medium machining positive rake angle

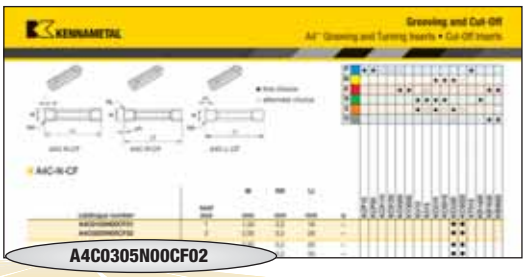
GUP = Grooving and turning high positive geometry. Especially in stainless steels and high-temp alloys

B = Flat top for special forms and applications

E = Flat top, slight honed edge

S = Negative land plus hone

ST = Single tip



Cut-Off Inserts

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

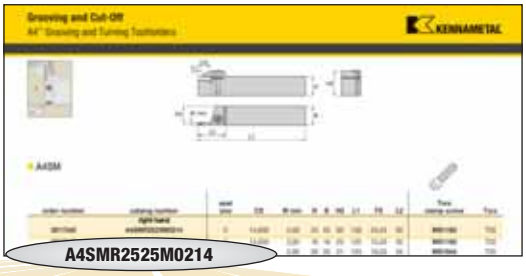
By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.
For more information, please visit **www.kennametal.com/carbiderecycling.**

How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



A4	S	M	R	2525M	02	14
Tooling System	Tool Style	Support Type	Hand of Tool	Shank Size	Seat Size	Max Grooving Depth
A4 = Grooving and Turning	**S** = Straight  **E** = End mounted 90°	**M** = Maximum support for specific groove widths and straight clearance for unlimited workpiece diameters **E** = No steel support for face grooving	 **R** = Right hand **L** = Left hand **N** = Neutral	**metric:** Height x width in mm, letter indicates tool length according to ISO **metric tool length (mm)** K = 125 M = 150 P = 170	02 03 04 05 06 08 10	in millimetres

By referencing this easy-to-use guide, you can identify the correct product to meet your needs.

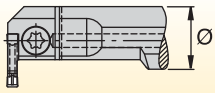
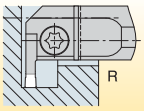
inch bars:
R = 8"
S = 10"
T = 12"

pocket seat size	cutting width (mm)
02	2,00–2,62
2B	2,39–2,62
03	3,0–3,05
04	4,0–4,05
05	5,0–5,05
06	6,0–6,05
08	8,0–8,05
10	10,0–10,05

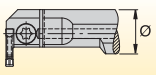


metric bars:
Bar diameter in millimetres

inch bars:
A two-digit number which indicates the bar diameter in 1/16" increments.



R = Right hand



L = Left hand

M = Maximum support

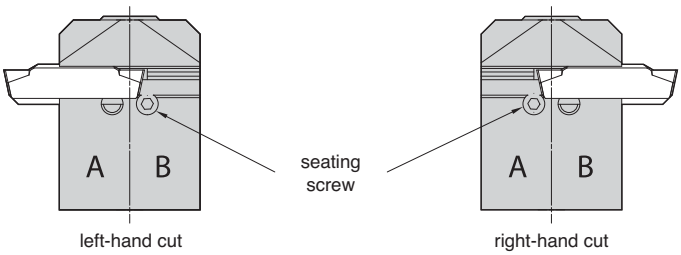
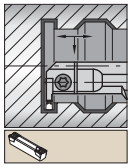
NOTE: D min for face grooving applications.
A4EN-style toolholders are designed without steel support for face grooving capacity.
Cutting feed recommendations should be reduced by 25–30%.
Recommended clamp screw torque, 6–8 Nm (50–70 in. lbs.).
Minimum cutting width supplied for reference only; see insert listing for actual width. Always match seat size of insert to seat size of holder.

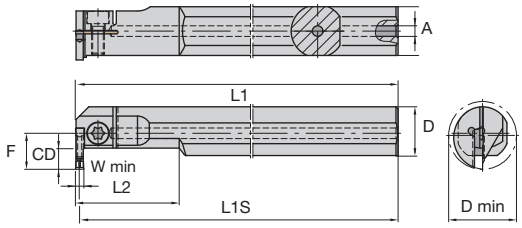
A4EN Insert Mounting



A4EN-style holders can be used for either left- or right-hand applications. The seating screw is to be used in position B for a left-hand cut and in position A for a right-hand cut.



Steel shank with through coolant.



A-A4E

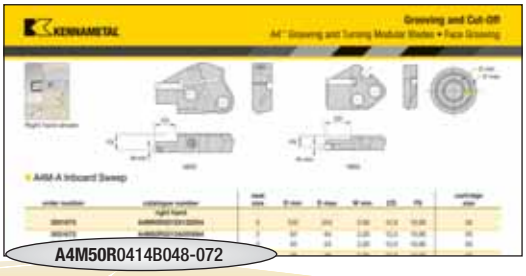
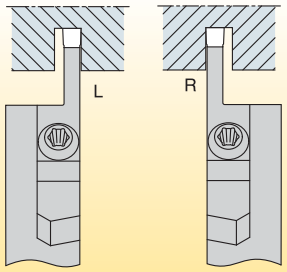
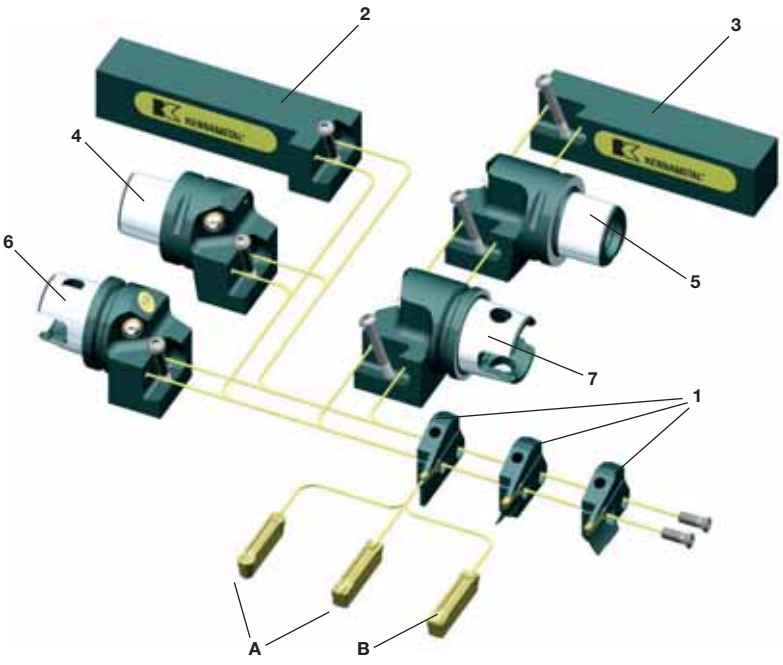
How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



A4M	50	R
A4 Tooling System	Modular System Size	Hand of Tool



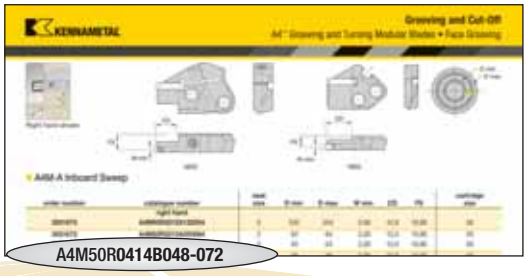


Legend		page(s)
A	A4 Grooving and Turning Inserts	D64–D78
B	A4 Cut-Off Inserts	D77
1	O.D. and Face Grooving Blades	D94–D98
2	KGME Toolholder	D103
3	KGMS Toolholder	D102
4	Capto® KGME Cutting Unit	D107
5	Capto KGMS Cutting Unit	D107
6	KM™ KGME Cutting Unit	D104–D106
7	KM KGMS Cutting Unit	D105

By customer demand, Kennametal Inc. and Sandvik® Coromant have entered into an agreement that allows both companies to manufacture, market, and sell KM and Coromant Capto products worldwide. Using the trademark Kennametal Capto, we make available a variety of leading and innovative Kennametal tooling designs utilising the Coromant Capto coupling.

The manufacture and marketing of Kennametal Capto products and the use of the "Capto" trademark are in accordance with a license granted from Sandvik.

By referencing this easy-to-use guide, you can identify the correct product to meet your needs.



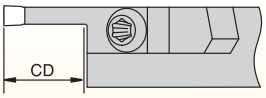
04

Seat Size

pocket seat size	cutting width (mm)
02	2,00–2,62
2B	2,39–2,62
03	3,0–3,05
04	4,0–4,05
05	5,0–5,05
06	6,0–6,05
08	8,0–8,05
10	10,0–10,05

14

Maximum Groove Depth

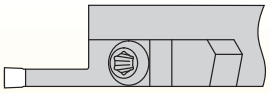


conversions:

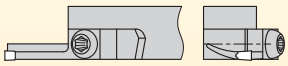
mm		inch
14mm	=	.55"
19mm	=	.75"
20mm	=	.79"
26mm	=	1.02"

B

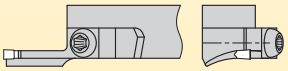
Tool Style



M = Maximum support for specific groove widths and straight clearance for unlimited workpiece diameters



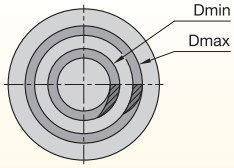
A = Inboard sweep face grooving toolholder



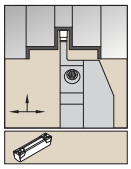
B = Outboard sweep face grooving toolholder

048-072

Face Grooving Diameter Range



diameters are min and max for outer face groove dia. 999 = unlimited D max



Right hand shown.

A4™ Tooling and Beyond™ Inserts

The unique clamping system and versatile insert geometry deliver the highest metal removal rates in the industry.

- One tool for turning, facing, grooving, face-grooving, and cut-off in O.D. and I.D. applications means exceptionally fast cycle times, no turret indexes.
- Extra-long clamping area, ground 120° bottom prism seating surface, and an exclusive top guide rail combine to deliver unsurpassed grooving and side-turning stability.
- Precise insert positioning is ensured for accurate cuts.
- Rigid clamping securely locks insert in place through the toughest cuts.
- Versatile design enables one system to handle O.D. and I.D. grooving, face grooving, back turning, undercutting, and even threading operations.
- Chip control inserts provide excellent chip evacuation in grooving and offer better chip control in multidirectional turning.

beyond™

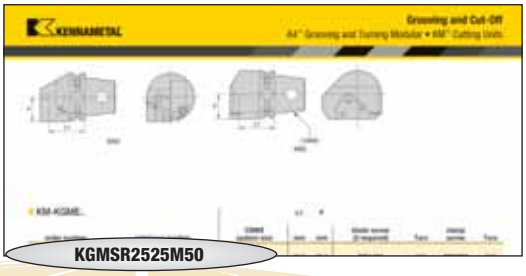
How Do Catalogue Numbers Work?

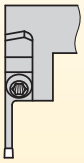
Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

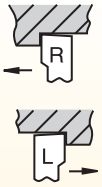


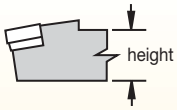
KGM	S	R	25	25	M	50
Grooving Modular	Tool Style	Hand of Tool	Shank Dimensions	Blade Size	Tool Length	Blade Size

S

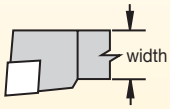
E







shank height in millimetres



shank width in millimetres

square shanks:
The number indicates the toolholder cross section in 1/16" increments.

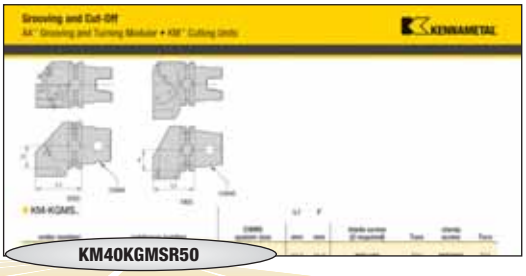
rectangular shanks:
The first digit indicates the number of 1/8" increments of width and the second digit indicates the number of 1/4" increments of height.

M = 150mm
N = Inch
P = 170mm

length over insert in a support blade with a 12,5mm D dimension according to ISO

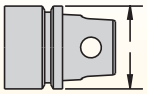
How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

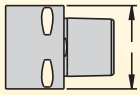


KM40	KGM	S	R	50	
System and Size	Grooving Modular	Tool Style	Hand of Tool	Blade Size	Special Conditions
	G = Square **R** = Full radius **V** = V-style 35°	**S** **E**	R L		**Y** = Mazak® INTEGREX® Y-series machines

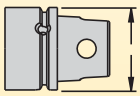
KM™ size
KM40™ = 40mm dia.
KM50™ = 50mm dia.
KM63™ = 63mm dia.



Kennametal Capto® size
C4 = 40mm dia.
C5 = 50mm dia.
C6 = 63mm dia.



KMXMZ size
KM63XMZ™ = 63mm dia.



(KM-KGMSR...)

(KM-KGMEL...)

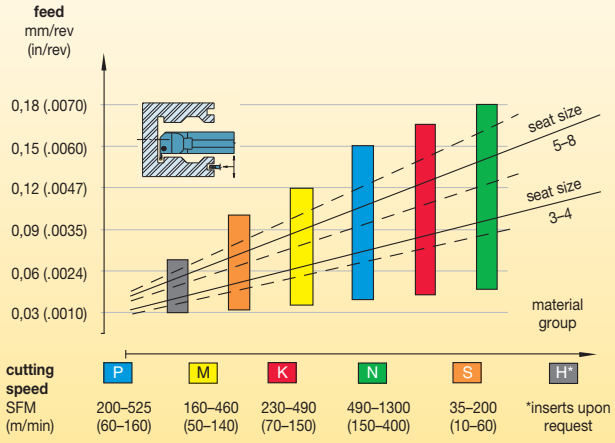
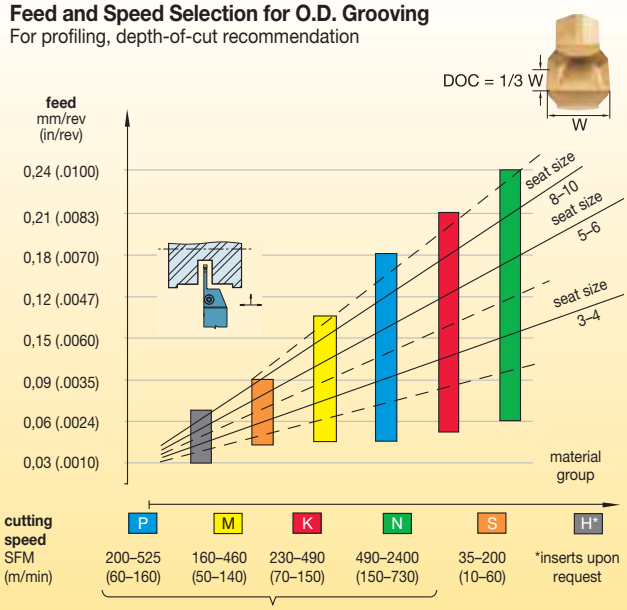
Application Guidelines

Feed and Speed Selection for I.D. and Face Grooving



Feed and Speed Selection for O.D. Grooving

For profiling, depth-of-cut recommendation

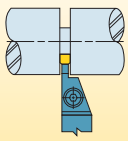


For radial grooving under stable conditions, feed can be increased by up to 50%.

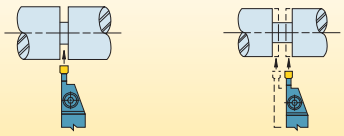
Tool Application Guidelines

- Always use good general machining practices.
- Make the machine and workpiece setup as rigid as possible.
- Integral shank toolholders offer the best rigidity. They should be your first toolholder choice, when possible.
- Use the toolholder with the shortest possible depth of cut for the application ("CD" dimension).
- When changing inserts, make sure the new insert locates securely against the toolholder's positive stop.
- Never tighten the clamping screw without an insert in the pocket.
- Toolholder projection out of the tool block should be as short as possible.
- Inserts should cut as close to center as possible.
- Dwell time in bottom of groove should be less than three revolutions.
- Recommended cutting speeds and feeds are a starting point. Adjust, as necessary, for optimum tool life and chip control.

Deep Grooves

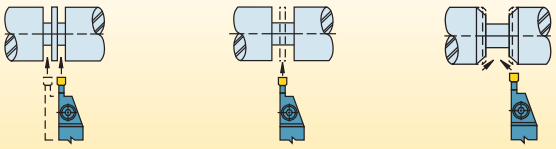


Deep Grooves Slightly Wider than the Tool



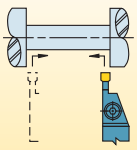
1. Plunge the center of the groove.
2. Plunge each side of the groove to get the specified width. Use a slower feed rate when cutting groove sides.

Extra Wide Deep Grooves



1. Plunge out both sides of the groove width.
2. Plunge center area to remove web of remaining material.
3. Plunge both sides of groove at the required angle, using approximately one-half the width of the grooving tool for maximum width of cut.

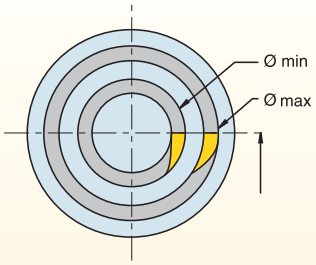
Finish Turning of the Groove/Light Profiling



1. Follow recommendations explained above.
2. To avoid insert chipping and to achieve groove wall perpendicularity, follow the tool path shown here.
3. Use the lightest depth of cut possible while still maintaining good chip breaking, tool life, and surface finish.

Grooving Tool Failure and Solution Guide

Face Grooving Application Guidelines



Tool Selection

- When selecting the toolholder, always start at the largest diameter possible and work toward the smaller diameter. This will allow the strongest tool to be used.

Cutting the First Groove

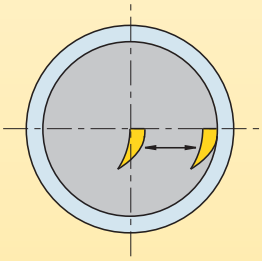
- The outside diameter of the first groove must be between the diameter minimum and diameter maximum capability of the face grooving tool (see illustration above). This creates clearance for the toolholder.

Chip Control

- Adjust speed and feed for good chip control and evacuation from the groove. Chip compaction can cause poor surface finish, tool breakage, and reduced tool life.

Tool Setting

- The tool should be set as close to the center as possible to avoid extreme formation of burrs.
- Align the cutting edge square to the workpiece.



Widening a Face Groove

- After the first groove has been cut, the groove width can be widened in either direction using the same tool. The best practice is to work from the O.D. to the I.D.

Practical Solutions to Grooving Problems

problem	remedy
burr	1. Verify tool center height. 2. Use sharp tools (index more often). 3. Use positive rake PVD coated insert. 4. Use correct grade for workpiece material. 5. Use correct geometry (e.g., positive rake for workhardening material). 6. Change tool path.
poor surface finish	1. Increase speed. 2. Use sharp tools (index more often). 3. Dwell time in bottom 1–3 revolutions (max). 4. Use proper chip control geometry. 5. Increase coolant flow. 6. Verify proper setup (overhang, shank size). 7. Use correct geometry (e.g., positive rake for workhardening material).
groove bottom not flat	1. Use sharp tools (index more often). 2. Dwell time in bottom 1–3 revolutions (max). 3. Reduce tool overhang (increase rigidity). 4. Reduce feed rate at groove bottom. 5. Use a wider insert. 6. Verify tool center height.
poor chip control	1. Use sharp tools (index more often). 2. Increase coolant concentration. 3. Adjust feed rate (usually increase first).
chatter	1. Reduce tool and workpiece overhang. 2. Adjust speed (usually increase first). 3. Adjust feed (usually increase first). 4. Verify tool center height.
insert chipping	1. Use correct grade for workpiece material. 2. Increase speed. 3. Reduce feed. 4. Use a stronger grade. 5. Increase tool and setup rigidity.
built-up edge	1. Use positive rake PVD coated insert. 2. Increase speed. 3. Reduce feed. 4. Increase coolant flow/concentration. 5. Use cermets.
side walls not straight	1. Check tool alignment for square. 2. Reduce workpiece and tool overhang. 3. Use sharp inserts (index more often).

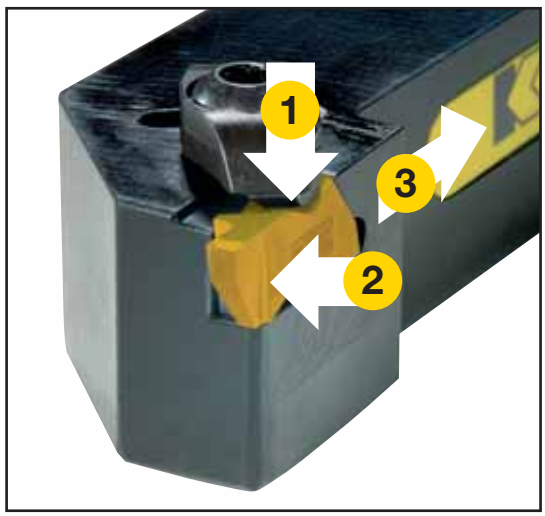
Top Notch™ Grooving Tools and Beyond™ Inserts for Your Shallow Groove and Turn Operations

Primary Application

Top Notch Grooving is the proven solution for high productivity. The Top Notch system provides consistent tool performance, accurate indexing, and superior clamping to provide excellent surface finishing and superior tool life.

Features and Benefits

- The Beyond PVD coated grades are designed to cut a variety of workpiece materials.
- Rigid clamping securely locks insert in place through the toughest cuts.
- Versatile design enables one system to handle O.D. and I.D. grooving, face grooving, back turning, undercutting, and even threading operations.
- Chip control inserts provide excellent chip evacuation in grooving, and offer better chip control in multidirectional turning.



Our rigid clamping design prevents insert movement during high-feed rate applications. This benefit ensures excellent surface finish, improved productivity, and superior tool life and promotes perfect concentricity. The rugged bridge clamp generates locking forces in three directions to provide superior resistance to side thrust and tangential forces.

Step 1 • Select system based on the required groove depth

What you need to know:

- Groove depth, width, and profile.
- Material to be machined.
- Application to be performed (face, O.D., or I.D. grooving).
- Toolholder requirements (e.g., KM™, square shank, right/left).

Top Notch™

Grooving
For grooving depth ≤1,5x grooving width, review system capability chart and proceed to Step 2.

A3™ or A4™

Deep Grooving
For grooving depth ≥1,5x grooving width, see A3 Deep Grooving pages D28–D33 or A4 Grooving and Turning pages D64–D78.

Top Notch Grooving for Internal, External, and Face Grooving Applications

system capabilities		minimum (mm)	maximum (mm)
O.D./I.D. grooving	width	0,79	9,53
	depth	1,27	9,53
face grooving	width	3,18	9,53
	depth	3,81	6,35
internal grooving	diameter	11,2	—
face grooving diameter	standard	23,9	—
	deep	47,6	—
deep O.D./I.D. grooving	width	1,57	6,35
	depth	3,18	12,70
deep face grooving	width	3,18	6,35
	depth	6,35	12,70

Step 2 • Select toolholder based on the application

NOTE: Toolholders are available as conventional square shank versions as well as quick-change versions. The insert size must match the gage insert of your toolholder selection.

O.D. and face grooving applications .....see pages D134–D136
I.D. grooving applications .....see pages D137–D139

Step 3 • Select chipbreaker style and feed rate

Chipbreaker and Feed Rates • mm/rev

workpiece material and application	P	M	K	N	S	H
first choice	NG-K 0,08–0,28	NG-K 0,07–0,20	NG 0,01–0,30	NGP 0,01–0,30	NG-K 0,07–0,20	NG-ST CBN tipped 0,05–0,10
alternate choice	NG 0,10–0,30	NGP 0,10–0,23	NG-K 0,08–0,28	NG-K 0,08–0,30	NGP 0,10–0,20	—

-K chipbreaker inserts	flat-top inserts	positive rake inserts

Step 4 • Select grade and speed

Recommendations for Grade and Speed Selection • m/min

machining condition	workpiece material P	M	K	N	S	H
high-performance for optimal conditions (clean cuts, good machine condition, higher speed capability)	KC9110 120–370	KCU10/KC5010 80–230	KD9320 120–370	KD1425 240–3050	KCU10/KC5010 20–120	KB5625 80–150
	KT315 100–230	KT315 70–200	KD5010 80–230	—	—	—
general purpose (first choice for general machining)	KC9110 120–300	KCU25/KC5025 50–120	KD9110 120–300	KC5410 150–910	KCU25/KC5025 10–60	KB5625 80–150
unfavorable conditions (roughing, poor machine condition, interrupted cuts, low speed, I.D. grooving)	KCU25/KC5025 50–140	KCU25/KC5025 40–90	KD5025 60–300	KCU25/KC5025 60–300	KCU25/KC5025 10–50	KB1630 60–110

Step 5 • Select insert and holder from catalogue page

NOTE: The insert size must match the gage insert size of your toolholder selection.

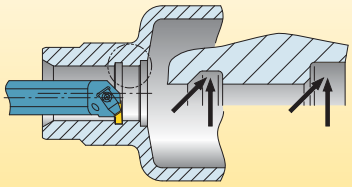
Example for Top Notch • Grooving

Material.....low-alloyed steel
Groove depth 2mm
Groove width 3mm
Operation .....I.D. cut, limited speed capability, plunge groove and chamfer

Recommendation

Insert.....NG2M300RK
Grade KC5025
Insert width 3mm
Insert size 2

Toolholder.....A20QNNTOL2 (metric)
Gage insert N.2R



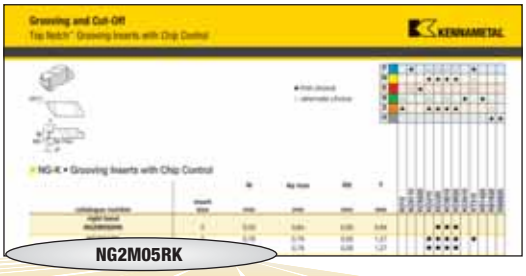
Speed: 120 m/min
Feed: 0,15 mm/rev

Congratulations!

You have successfully maximised your productivity by selecting the best Top Notch insert geometry, grade, and cutting specifications for your application!

How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



N	G		2	M	05	R		K	
Type of Insert	Insert Style	Additional Information	Insert Size	Size Identification	Groove Size**	Hand of Insert	Cutting Depth	Chipbreaker Design	Definition of Inserts
N = Top Notch	**B** = Blank (for special forms) **F** = Face grooving **G** = Grooving **P** = Back turning **R** = Full radius **U** = Undercutting (or relieving) **V** = Poly-Vee	**D** = Deep grooving **P** = Positive **C** = Groove and chamfer		**M** = Metric insert groove width **C** = Circlip groove insert width is nominal circlip size □= Blank indicates inch width insert		**L** = Left hand **R** = Right hand	Shown for groove and chamfer inserts in 0,01mm increments	**E** = Hone only **K** = Standard chip control **S** = T Land and Hone **ST** = STD Tip (PCBN)	Groove size "J" or "L" for Poly-Vee inserts "I" indicates internal face grooving insert

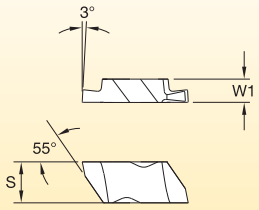
insert number	W1 (mm)
1	2,54
2	3,81
3	4,95
4	6,48
5	9,65
6	9,73

Position pertains to groove width for F-, G-, and U-style inserts; radii for R-style grooving inserts; and circlip size for groove and chamfer inserts. Dimension in 0,01mm.
Example: 3,25mm width groove or radius equals "325" catalogue position number.
Width tolerance: ± 0,025mm unless otherwise specified

*Kennametal proprietary identification system.

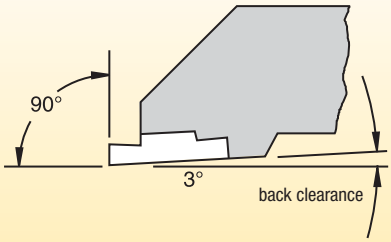
**Omit position for Top Notch NB-style blanks.

Top Notch Threading and Grooving Insert Dimensions



insert size	S		W1	
	mm	inch	mm	inch
1	2,54	.100	2,54	.100
2	5,56	.219	3,81	.150
3	8,74	.344	4,95	.195
4	11,51	.453	6,48	.255
5	17,48	.688	9,65	.380
6	11,51	.453	9,73	.383
8	7,93	.312	11,13	.438

Top Notch Holder Design



NOTE: Holders are designed to locate insert inclined to 3° to provide back clearance down open side.

Kennametal and Top Notch tooling technology combine to bring you the very best threading and grooving system available in the world today.

insert style	application	rake angle	page(s)
NG	• General-purpose grooving. • O-ring grooving. • Circlip grooving.	neutral	D118
NG-K	• Chip control geometry. • General-purpose grooving. • O-ring grooving. • Circlip grooving. • Light turning.	10° positive	D120
NG-ST 	• Hard turning.	neutral	D125
NGC-K	• Combined groove and chamfered edge break in one positive plunge with chip control. • Designed for DIN 471/472 standard circlip grooves.	10° positive	D131
NGD	• Deep grooving.	neutral	D123
NGD-K 	• Chip control geometry. • Deep grooving. • Light turning.	10° positive	D124
NGP	• General-purpose grooving. • O-ring grooving. • Circlip grooving.	5° positive	D123
NF	• Face grooving. • Additional side clearance.	neutral	D129
NF-K	• Face grooving with chip control. • Additional side clearance.	10° positive	D129
NFD-K	• Deep face grooving with chip control. • Additional side clearance.	10° positive	D129

insert style	application	rake angle	page(s)
NFD-KI	• Internal deep face grooving with chip control. • For use in boring bars for internal face grooves.	10° positive	D130
NP-K NPD-K 	• Turning. • Back turning positive. • Profiling with chip control.	10° positive	D130
NR	• Full radius grooving. • Turning profiling.	neutral	D126
NR-K	• Chip control geometry. • Full radius grooving turning profiling.	10° positive	D127
NRD	• Deep grooving. • Full radius endform.	neutral	D128
NRP	• Full radius grooving. • Light-turning profiling.	5° positive	D127
NU	• Undercutting.	neutral	D128
NV	• Poly Vee grooving.	neutral	D128
NB/NBD	• Blanks. • Blanks for deep grooving. • Available only in uncoated grades.	—	D131

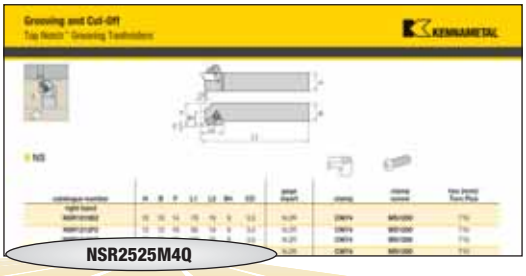
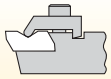
How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

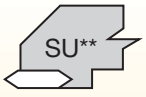


N	S	R		2525	M	4	Q
Insert Holding Method	Insert Mounting Location	Hand of Tool	Drop Head	Shank Size	Tool Length	Insert Size	Qualified Surface and Length

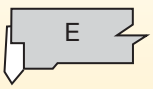
N = Top Notch*



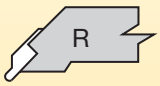
S = Insert Mounting Location



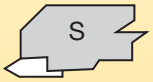
SU = Side mount utility**



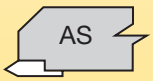
E = End



R = Undercut

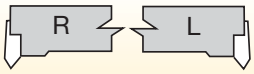


S = Side mount, offset

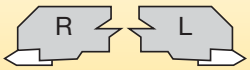


AS = side mount, no offset

R = Hand of Tool

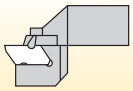


End mount



Side mount

DH = Drop Head



2525 = Shank Size

metric:
Shank height and width in mm and holder length according to ISO standard.

inch:
This position will show a significant two-digit number that indicates the holder cross section. For shanks 5/8" square and larger, the number will represent the number of sixteenths of width and height. For shanks under 5/8" square, the number of sixteenths of cross section will be preceded by a zero. For rectangular holders, the first digit represents the number of eighths of width and the second digit the number of quarters of height, except for a toolholder 1-1/4" x 1-1/2", which is given the number 91.

M = Tool Length

L1	ISO
32	A
40	B

NOTE: Minimum bore diameter (D min) capability varies with groove type.
F dimension measured over the flat point of the Top Notch style grooving insert.

Machining Guidelines for Chip Control • Grooving

- Center height of insert should be positioned at the center of the workpiece, or up to 0,13mm (.005") above.
- Dwell time in the bottom of the groove, more than three revolutions, is not recommended.
- Chip control is feed rate related and should be adjusted to fit the particular situation. Recommended feed range is 0,08–0,3 mm/rev (.003–0.012 IPR).

Machining Guidelines for Chip Control • Turning/Profiling

- Maximum depth of cut for side cutting (turning/profiling) depends upon material being cut and width of the tool. However, some general guidelines are:
  1) 0,79–1,6mm (.031–062") wide insert can cut up to 0,6mm (.025") deep.
  2) 1,7–3,3mm (.067–.128") wide insert can cut up to 1mm (.040") deep.
  3) 3,5–4,8mm (.138–.189") wide insert can cut up to 2mm (.080") deep.
  4) 5–9,5mm (.197–.375") wide insert can cut up to 3mm (.120") deep.

Groove Limits (Maximum Internal Groove Depth vs. Minimum Bore Diameter)

	maximum groove depth	minimum bore diameter
insert	mm	mm
NG-1094L	1,91	20,32
	1,02	11,18

NG-4219R/L	5,54	82,55
NG-4250R/L	5,08	63,50

NOTE: The same maximum groove depth and minimum bore diameter values also apply to metric, NG-K (chip control), and NR (full radius) inserts of similar size.

Finish Turning the Groove

1. Plunge both sides of groove width.
2. Plunge center area to remove web of material remaining.
3. To avoid insert chipping and to achieve groove wall perpendicularity, follow the tool path outlined here.
4. Use the lightest depth of cut that still allows good chip breaking, tool life, and surface finish.

	maximum groove depth	minimum bore diameter
insert	mm	mm

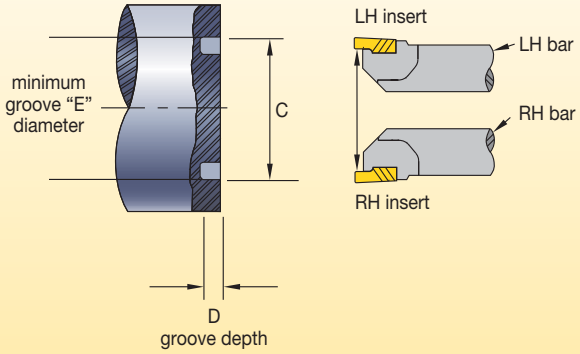
NOTE: For internal applications, use only NFD-KI inserts.

Boring bars



KGF and KGT Cut-Off Inserts

Primary Application

KGT and KGF inserts specifically designed to fit SELF-GRIP® toolholders available from Iscar®. For traditional cut-off applications, the original KGT-style inserts are available in widths ranging from 2,25–4,80mm. For increased stability in large diameter cut-off applications, the KGF geometry is available in widths ranging from 1,60–9,50mm.

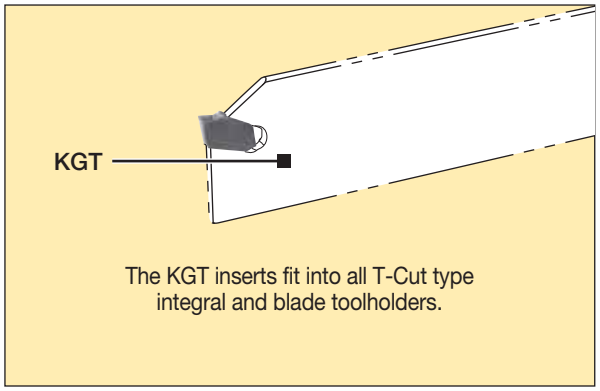
Features and Benefits

KGT Inserts

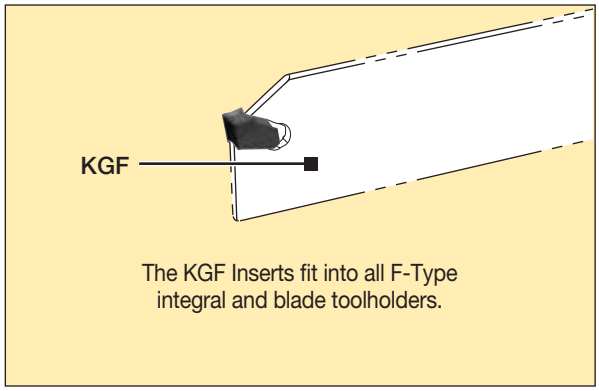
- KGT inserts are T-Type with no stopper. The KGT inserts replace single-end cutting inserts.

KGF Inserts

- Single-side insert for cut-off applications. This insert has a hard stop that seats insert securely into the pocket.



The KGT inserts fit into all T-Cut type integral and blade toolholders.



The KGF Inserts fit into all F-Type integral and blade toolholders.

Top Notch™ Thread Tooling Is the Proven High-Productivity Threading Solution!

Primary Application

Top Notch Threading with Beyond™ Insert technology provides consistent tool performance and superior clamping thread to almost any operation. With the largest selection of grades and geometries in the industry, the Top Notch Threading system is a proven solution.

Features and Benefits

Choosing the Top Notch Threading System

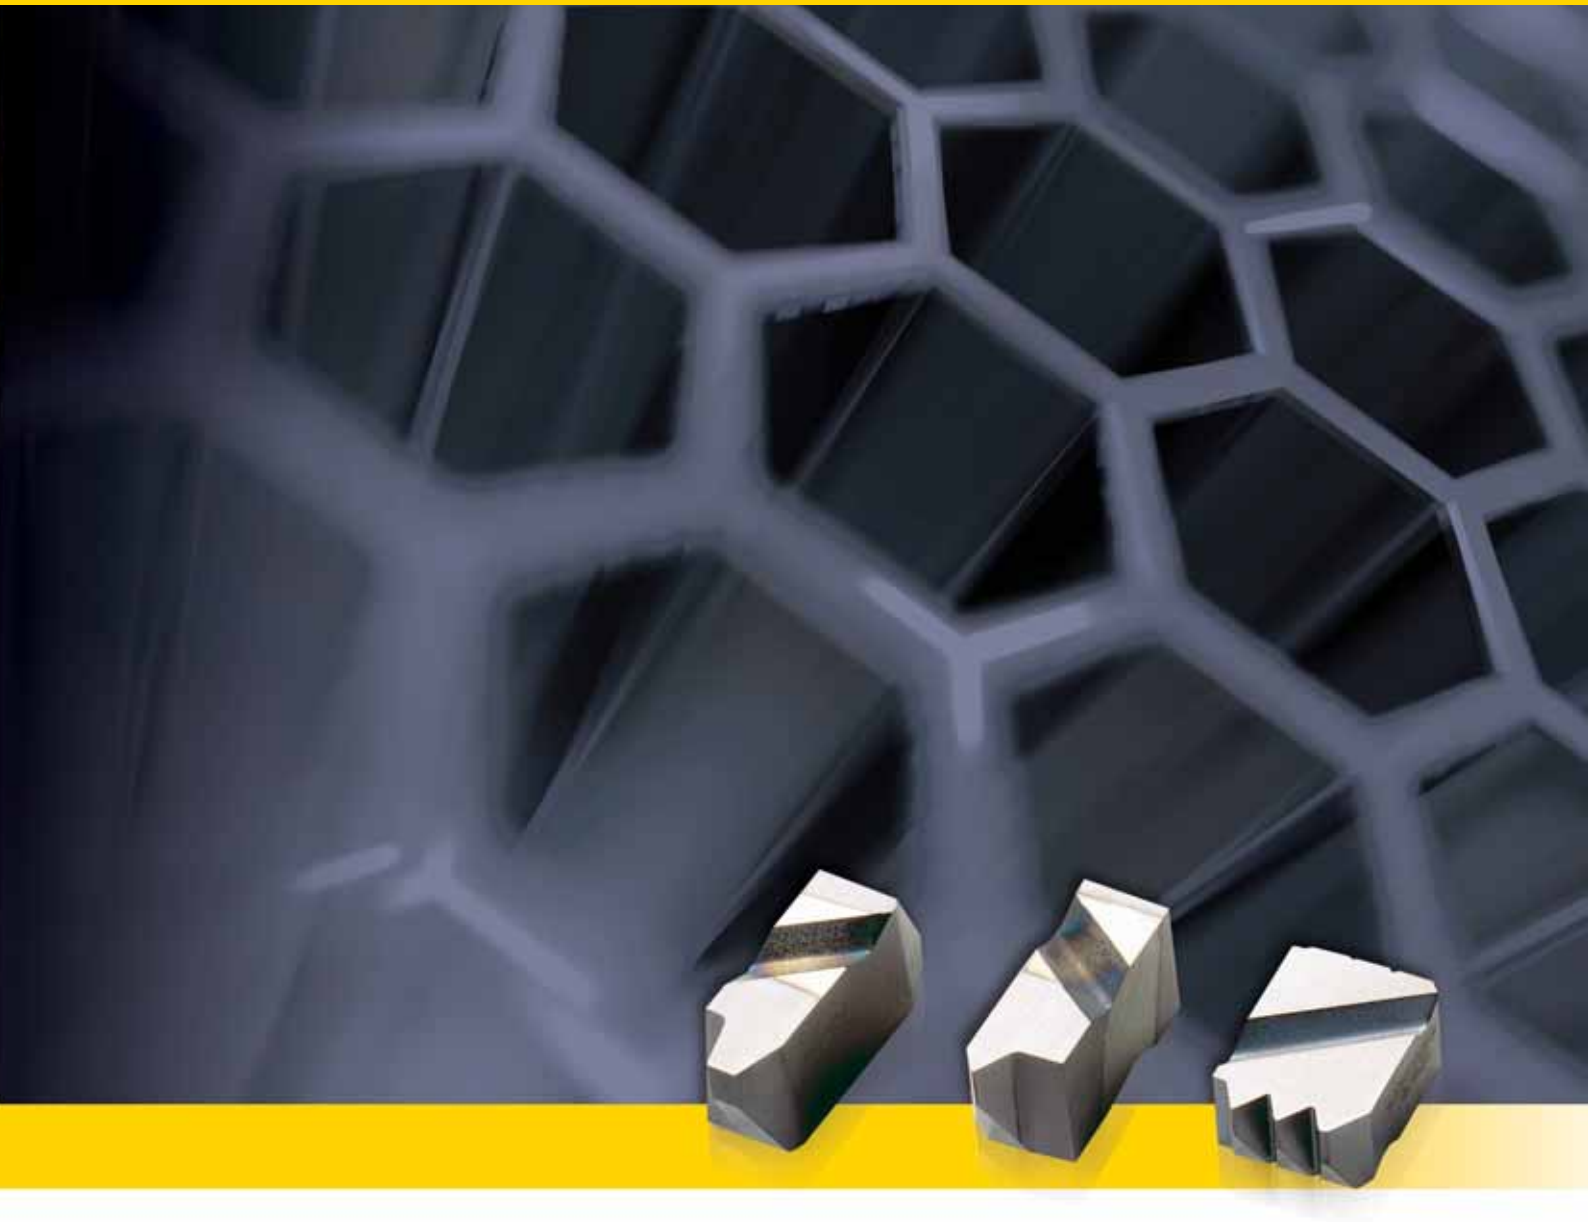
- A superior choice for heavy-duty applications like machining of Acme, Buttress, and API threads. Top Notch is also the best system for coarse pitch and multitooth threading applications.
- Largest selection of insert geometries and grades in the industry.
- A very rigid insert clamping design ensures best tool life, surface finish, and workpiece quality.
- Simplicity of the Top Notch design does not require shim selection for thread helix angles. This helps to avoid mistakes on the shop floor.
- Reduces inventory by using the same Top Notch toolholders and boring bars with either threading or grooving inserts.
- Top Notch chipbreaker inserts eliminate long troublesome coils.
- An excellent choice for special thread forms and toolholder designs.

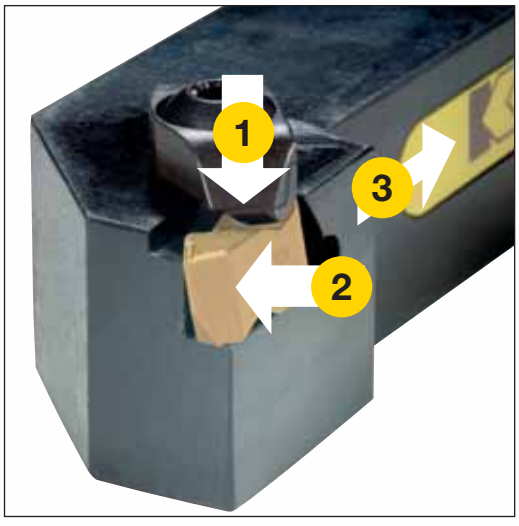
Precision-Ground Thread Form

- Minimises built-up edge.
- Precisely cuts most common materials.
- Reduces cutting forces.
- Ensures accurate high-quality threads.

Superior Chip Control

- Eliminates long, troublesome coils.
- Excellent for internal threading operations.
- Available in partial profile inserts for 60° thread forms.





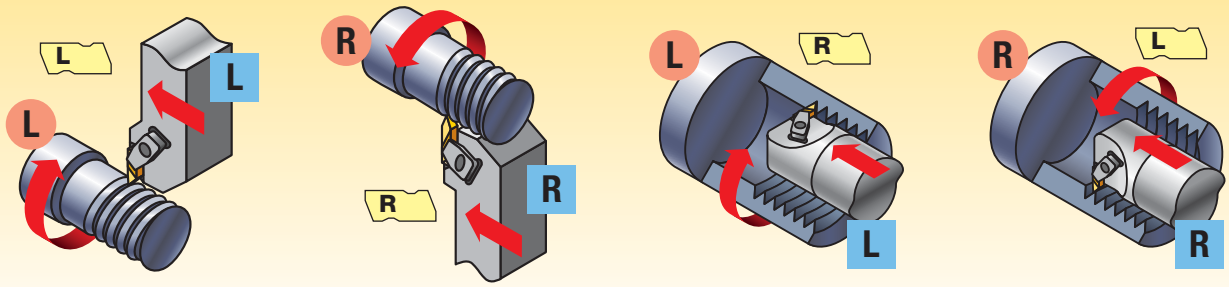
1
2
3

Step 1 • Select threading method and hand of tooling

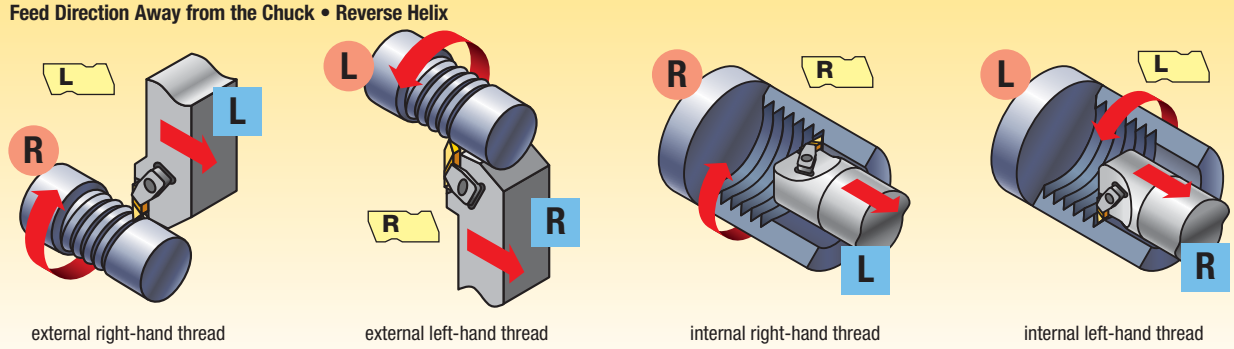
What you need to know:

- External/internal operation.
- Spindle rotation/hand of thread.
- Feed direction.

Feed Direction Toward the Chuck • Standard Helix



Feed Direction Away from the Chuck • Reverse Helix



NOTE: Top Notch threading bars require opposite hand insert and clamp.
Right-hand bar requires left-hand insert and clamp.
Left-hand bar requires right-hand insert and clamp.

Step 2 • Select insert for application

- See threading insert overview on page E9.
- Select cresting inserts for fully controlled thread form including diameter control. Cresting inserts eliminate the need for deburring.
- Non-cresting partial profile inserts can cut a variety of thread pitches. Chip control is only available with partial profile inserts.
- Note insert size for toolholder selection.

insert size	catalogue number	KCU25/KC5025	KCU10/KC5010
2	NT-2RK	●	●
3	NT-3RK	●	●
4	NT-4RK	●	●

Step 3 • Select grade and speed

Recommendations for Grade and Speed Selection • m/min

workpiece material	P	M	K	N	S
insert style	chip control or neutral	chip control or positive	neutral	positive	positive
optimum cutting conditions	**KCU10/KC5010** 50–230	**KCU10/KC5010** 50–185	**KCU10/KC5010** 70–210	**KC5410** 70–390	**KCU10/KC5010** 20–120
first choice	**KCU25/KC5025** 40–200	**KCU25/KC5025** 40–135	**KCU25/KC5025** 60–145	**KCU25/KC5025** 50–360	**KCU25/KC5025** 10–100

Example
Chip control .....NT-K or NT-CK (partial profile only)
Neutral .....NT, NT-C, NTF, NTC, NJ, NJF, NDC-V, NA, NDC, NTB-A/B
Positive .....NTP, NTK, NJP, NJK

Step 4 • Select holder from catalogue page

What you need to know:

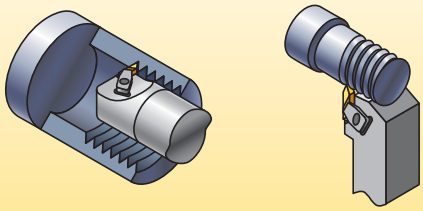
- External/internal operation.
- Minimum bore diameter (for internal operations).
- Hand of tool.
- Insert size (gage insert).

NOTE: The insert size must match the gage insert size of your toolholder selection.

catalogue number	gage insert
NSR-163D	N.3R
NSR-164D	N.4R

NOTE: Top Notch toolholders and boring bars are listed with a gage insert to indicate the size and hand required. They are compatible with both grooving and threading inserts of the same size.

Select the Appropriate Holder for the Insert Size and Hand:

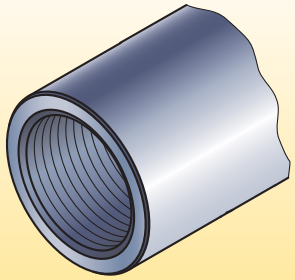


NOTE: Optimise your threading operation by using the proper infeed angle and the recommended infeed values.

Step 5 • Select insert and holder from catalogue page

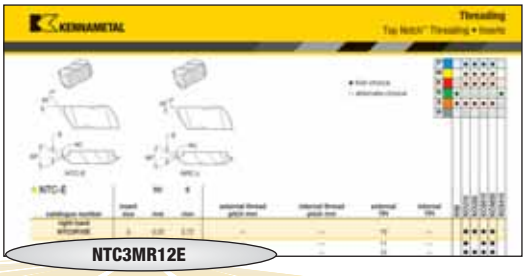
Top Notch Threading Example
Application .....8 TPI Acme internal right-hand thread
Material .....alloy steel
Workpiece diameter 114,3mm
good cutting conditions
feed toward the chuck

Recommendation
Insert NA3L8
Grade KC5010
Insert size 3
Boring bar A50UNNT0R4
Gage insert N.3L
Speed .....150 m/min
Infeed passes .....12 passes



How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



N — Type of Insert

N = Top Notch*

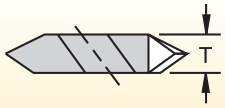
T — Insert Style

A = Acme
D = API or NPT
J = UNJ thread
T = 60° V thread
W = 55° V Whitworth

C — Additional Information

B = Buttress
F = Fine pitch
S = Stub Acme
C = Cresting
P = Positive rake
K = Fine pitch, positive
U = Utility**

3 — Insert Size



insert size	T (mm)
1	2,54
2	3,81
3	4,95
4	6,48
5	9,65
6	9,73
8	11,13

See full dimension chart below

M — Industry Thread Identification

Position indicates API or drilling industry form designation (e.g.,10RD, 8RD, .038)

or

Controlled root radius threading inserts indicate the root radius in .001" increments (NJ, NJF, NJP, NJK)

or

M indicates metric ISO thread

R — Hand of Insert

R = Right hand
L = Left hand

12 — Definition of Insert

- Threads per inch or pitch (for metric)
- "A" or "B" type Buttress insert
- Taper per foot — API threads

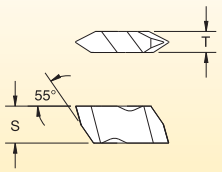
E — Additional Information

I = Internal thread
E = External thread (used only if internal and external thread forms are different)

M = Multiple tooth
K = Standard chip control
C = Coarse pitch
D = Dryseal

*Kennametal proprietary standard only.
**Utility threading insert can only be used in NSUR/L utility holders.

Top Notch Threading and Grooving Insert Dimensions



insert size	S mm	T mm
1	2,54	2,54
2	5,56	3,81
3	8,74	4,95
4	11,51	6,48
5	17,48	9,65
6	11,51	9,73

style			thread profile	standard	tolerance class	cresting	application	page(s)
chip control — K	neutral	positive						
NT-K	NT	NTP	Partial Profile 60º	—	—	N	General use for 60º thread forms such as ISO and UN where non-cresting inserts are desired to cut a variety of pitches	E10–E11
NT-CK			Partial Profile 60º — coarse pitch	—	—	N	Coarse pitch 60º thread forms such as ISO and UN where non-cresting inserts are desired to cut a variety of pitches	E11
	NTF	NTK	Partial Profile 60º — fine pitch	—	—	N	Fine pitch 60º thread forms such as ISO and UN where non-cresting inserts are desired to cut a variety of pitches — able to thread close to shoulders	E11–E12
	NTU		Partial Profile 60º — four-edged insert	—	—	N	Four-edged insert for 60º partial profile threading — requires NSU-style toolholder for size 4U insert	E12
	NTC-M		Metric ISO	ISO R262, DIN 13	6g/6H	Y	Widely used metric 60º V-form for all industries	E12
	NTC		American UN	ANSI B1.1:03	2A/2B	Y	Widely used inch-based 60º V-form for all industries	E12–E13
	NJ	NJP	UNJ	MIL-S-8879C	3A/3B	N	Controlled root radius on external threads for military and aerospace industries	E14
	NJF	NJK	UNJ — fine pitch	MIL-S-8879C	3A/3B	N	Controlled root radius on external threads for military and aerospace industries — able to thread close to shoulders	E15
	NDC-V		NPT	ANSI B2.1:83	Standard NPT	Y	National Pipe Thread standard forms for pipe fittings	E16
	NDC-V-M		NPT — multitooth	ANSI B2.1:83	Standard NPT	Y	High productivity multitooth threading inserts for NPT threads	E16
	NWC		Whitworth, BSW, BSP	BS 84:1956, ISO 228/1:1982, DIN 259	Medium Class A	Y	Widely used 55º form for gas and water connections	E17
	ND		API Rotary Shoulder Connections — partial profile	API SPEC. 7:1990	Standard API	N	60º V-form used for rotary shoulder pipe connections in the oil and gas industry including V-.038R, V-.040, and V-.050 forms	E17
	NDC		API Rotary Shoulder Connections — cresting	API SPEC. 7:1990	Standard API	Y	60º V-form used for rotary shoulder pipe connections in the oil and gas industry including V-.038R, V-.040, and V-.050 forms — complete cresting form including taper	E18
	NDC-RD		API Round	API STD. 5B:1979	Standard API RD	Y	60º V-form with large radius for casing, tubing, and line pipe in the oil and gas industry including 8 and 10 round forms	E18
	NDC-RD-M		API Round — multitooth	API STD. 5B:1979	Standard API RD	Y	High productivity multitooth threading inserts for API round threads	E18
	NA		Acme	ANSI B1.5:1988	3G	N	29º truncated thread form for motion applications in a wide variety of industries	E19
	NAS		Stub Acme	ANSI B1.8:1988	2G	N	Shallow depth 29º truncated thread form for motion applications in a wide variety of industries	E20
	NTB-A		American Buttress 7º pressure flank leading (Push)	ANSI B1.9:1973	Class 2	N	Sawtooth form for axial load bearing applications in a variety of industries — use the "A" style when the 7º pressure flank is the leading edge	E20
	NTB-B		American Buttress 45º clearance flank leading (Pull)	ANSI B1.9:1973	Class 2	N	Sawtooth form for axial load bearing applications in a variety of industries — use the "B" style when the 45º clearance flank is the leading edge	E21

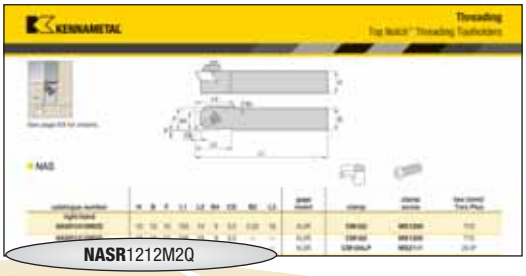
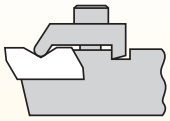
How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

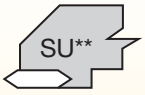


N
Insert Holding Location

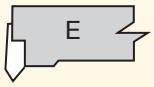


N = Top Notch*

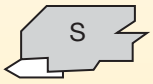
AS
Insert Mounting Location



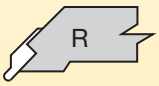
SU = Side mount utility



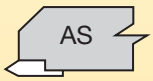
E = End



S = Side mount, offset

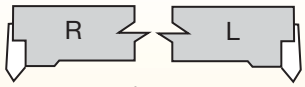


R = Undercut

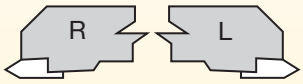


AS = Side mount, no offset

R
Hand of Tool

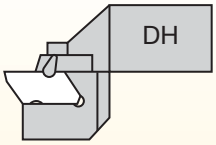


end mount



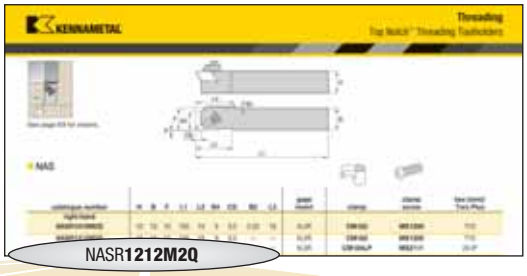
side mount

Drop Head



*Kennametal proprietary standard only.
**Side mount utility holder can only use NTU inserts.

By referencing this easy-to-use guide, you can identify the correct product to meet your needs.



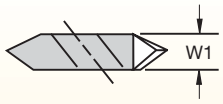
1212
Shank Size

metric:
Shank height and width in mm and holder length according to ISO standard.

M
Tool Length

L1	ISO
32	A
40	B
50	C
60	D
70	E
80	F
90	G
100	H
110	J
125	K
140	L
150	M
160	N
170	P
180	Q
200	R
250	S
300	T
350	U
400	V
450	W
500	Y
special length	X

2
Insert Size



insert size	W1 (mm)
2	3,81
3	4,95
4	6,98
5	9,65
6	9,73
8	11,13

Q
Qualified Surface and Length

A = Qualified back and end, 4" long
B = Qualified back and end, 4.5" long
C = Qualified back and end, 5" long
D = Qualified back and end, 6" long
E = Qualified back and end, 7" long
V = Qualified back and end, 3.5" long
Q = Qualified metric holder

See page E9 for inserts.

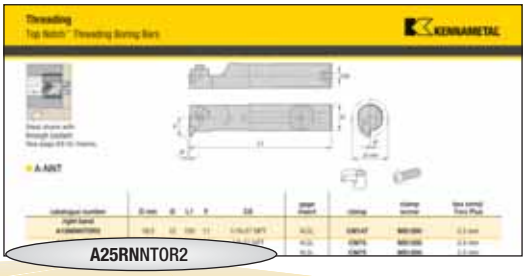
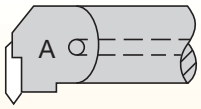
How Do Catalogue Numbers Work?

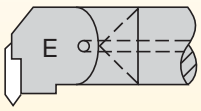
Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



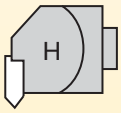
A
Bar Type



A = Steel with coolant

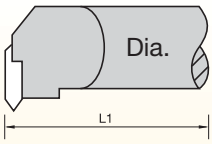


E = Carbide with coolant



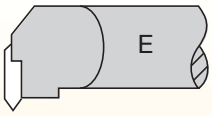
H = Interchangeable head

25
Bar Diameter



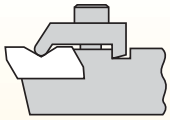
Bar diameter in millimetres

R
Bar Length



metric bars:
M = 150mm
Q = 180mm
R = 200mm
S = 250mm
T = 300mm
U = 350mm

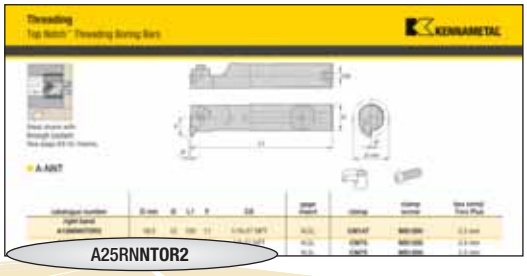
N
Insert Holding Method



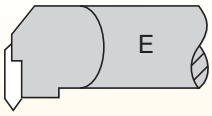
N* = Top Notch

*Kennametal standard only.

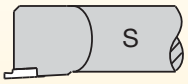
By referencing this easy-to-use guide, you can identify the correct product to meet your needs.



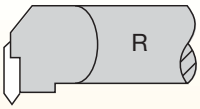
N	T	O	R	2
Insert Shape	Insert Location	Rake Angle	Hand of Bar	Insert Size



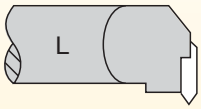
E = End mount



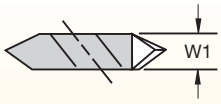
S = Straight mount



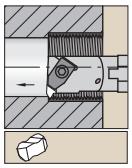
R = Right hand



L = Left hand



insert size	W1
1	3,54
2	3,81
3	5,35
4	6,40
5	9,65
6	9,73
8	11,13



Steel shank with
through coolant.
See page E9 for inserts.

The LT — Laydown Threading System

Triangle threading inserts and tools that provide the highest accuracy and quality level for daily production needs.

- LT is the system of choice for fine-pitch threads, high-helix/multistart threads, and single-point threading in small-diameter bores.
- Variable shim angles enable proper cutting geometry for high-helix angle and reverse helix angle threading.This maximises tool life and improves thread quality.
- Increase productivity by outperforming conventional PVD grades with up to a 30% advantage in cutting speeds.

Experience the advantages at your Authorised Kennametal Distributor or at **www.kennametal.com**.

www.kennametal.com

KENNAMETAL®

LT • Laydown Triangle Threading

Primary Application

LT Laydown triangle threading is the system of choice for fine-pitch threads, high-helix/multistart threads, and single-point threading in small-diameter bores. With a wide selection of CB-style chip control inserts, you will receive superior chip management for excellent surface finishes and minimal operator intervention. The low-profile design enables unrestricted chip flow — ideal for I.D. threads, and variable shim angles enable proper cutting geometry for high-helix angle and reverse helix angle threading, maximising tool life and improving thread quality.

Features and Benefits

Precision-Ground Thread Form on LT and LT-CB

- Minimises built-up edge.
- Precisely cuts most common materials.
- Reduces cutting forces.
- Ensures accurate, high-quality threads.

Superior Chip Control

- Eliminates long, troublesome coils.
- Excellent for internal threading operations.
- Available in both partial and full profile inserts for all common thread forms.

KC5010™ and KC5025™ Premium PVD TiAlN-Coated Grades

- Increase tool life at existing machining conditions.
- Increase productivity by outperforming conventional PVD grades with up to a 30% advantage in cutting speeds.

Kenna Universal™ Inserts

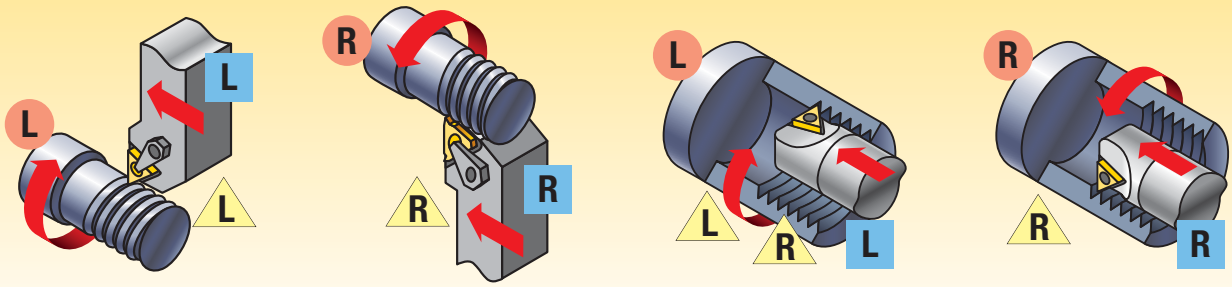
- Precision moulded LT-K thread form provides outstanding utility and value.
- Excellent chip control combined with the new KU25T™ grade enables trouble-free threading on a variety of workpiece materials.

Step 1 • Select threading method and hand of tooling

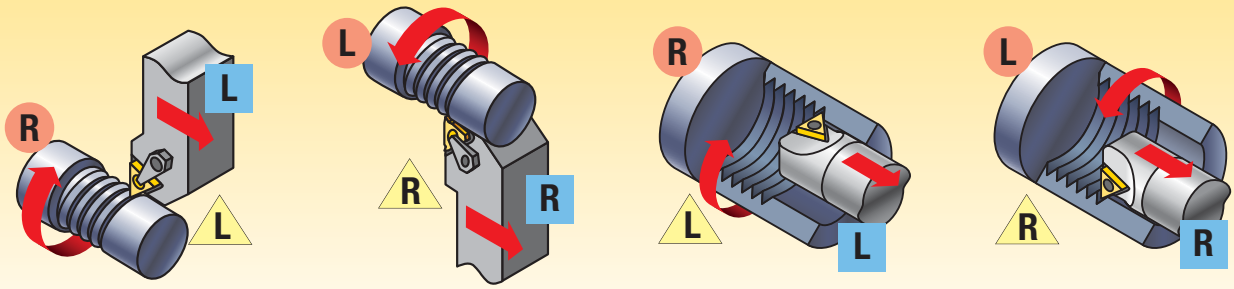
Required Information:

- External/internal operation.
- Spindle rotation/hand of thread.
- Feed direction.

Feed Direction Toward the Chuck • Standard Helix



Feed Direction Away from the Chuck • Reverse Helix

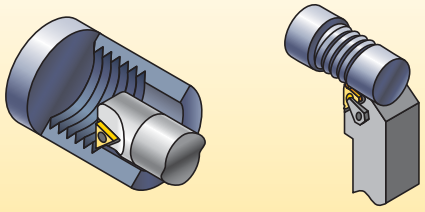


Step 2 • Select threading method and hand of tooling

Required Information:

- External/internal operation.
- Minimum bore diameter (for internal operations).
- Hand of tool.
- Insert size (gage insert).

Select the Appropriate Holder for the Insert Size and Hand:

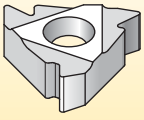


The insert size must match the gage insert size of your toolholder selection:

catalogue number	gage insert	minimum bore diameter	shim
S1212LSER3	LT16NR	.90"	SM-YI3
A2020LSER16	LT16NR	16mm	SM-YI3

Step 3 • Choose insert for application

- Select cresting inserts for fully controlled thread form including diameter.
- Cresting inserts eliminate the need for deburring and are optimised for the best tool life at that pitch.
- Non-cresting partial profile inserts offer the flexibility to cut a variety of thread pitches with one insert.
- Note insert size for toolholder selection.



insert size	catalogue number	TN6025
11	LT11NRA60	●
16	LT6NRAG60	●

NOTE: See Threading Insert Overview on page E41.

Step 4 • Select grade and speed

Recommendations for Grade and Speed Selection • SFM (m/min)

	workpiece material	P	M	K	N	S
Kenna Perfect™	insert style	CB chipbreaker		Flat Top 	CB Chipbreaker		optimum cutting conditions	**KC5010** 160–750	**KC5010** 160–600	**KC5010** 230–700	**KC5010** 230–1300	**KC5010** 65–400
	first choice	**KC5025** 130–650	**KC5025** 130–450	**KC5025** 200–475	**KC5025** 160–1150	**KC5025** 35–330
Kenna Universal™	insert style	-K chipbreaker				
	selection	**KU25T** 80–450	**KU25T** 80–350	**KU25T** 100–360	**KU25T** 100–1000	**KU25T** 35–280

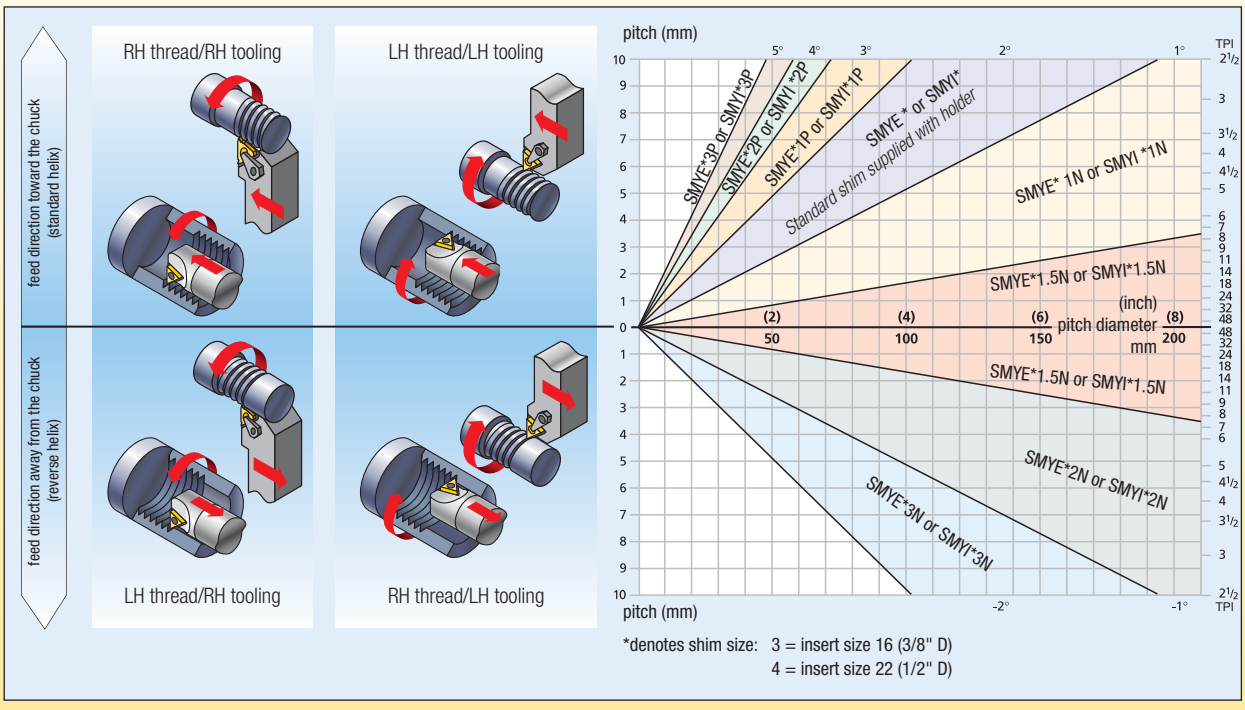
NOTE: CB-style chip control inserts are not available with some thread forms.
In those cases, flat top inserts can be substituted.

Step 5 • Select appropriate shim

Required Information:

- Thread form (TPI or pitch).
- Pitch diameter.
- Helix method (hand of tool, feed direction, hand of thread).

Select the proper shim: SMYE... for external RH or internal LH
SMYI... for internal RH or external LH

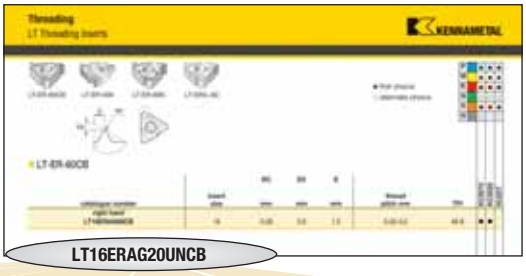


*denotes shim size: 3 = insert size 16 (3/8" D)
4 = insert size 22 (1/2" D)

NOTE: If recommended shim is different from shim supplied with toolholder, order shim separately.
Optimise your threading operation by using the proper infeed angle and the recommended infeed values.
See the Technical Section on page E81–E83.
Also see detailed shim selection information on pages E101–E103.

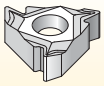
How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



LT16ERAG20UNCB

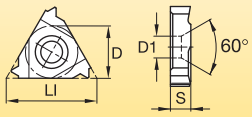
LT — Type of Insert



LT = Laydown triangle threading

16 — Cutting Edge Length (Size)

insert size	LI (mm)	D (mm)	S (mm)	D1 (mm)
11	11,0	6,35	3,20	3,25
16	16,5	9,52	3,63	3,94
22	22,0	12,70	4,78	4,88



ER — Hand of Insert

ER = External right hand
EL = External left hand
NR = Internal right hand
NL = Internal left hand

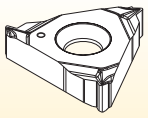
AG20 — Thread Pitch

partial profile		
designation	**thread pitch (mm)**	**TPI**
A	0,50–1,5	48–16
AG	0,50–3,0	48–8
G	1,75–3,0	14–8
N	3,50–5,0	7–5
full profile		
actual TPI or pitch in mm is designated	0,5–4,0	48–8

UN — Thread Profile

ISO = ISO metric 60°
UN = American UN 60°
60 = Partial profile non-cresting 60°
55 = Partial profile non-cresting 55°
W = Whitworth 55°
BSPT = British Standard Pipe Thread 55°
NPT = American National Pipe Thread 60°
ACME = American Acme
STACME = American Stub Acme
TR = Trapez DIN 103
RD = Round DIN 405
UNJ = Controlled root radius 60°
NPTF = Dryseal 60°
API = American Petroleum Institute Threads
BUT = API Buttress Casing
APIRD = API Round

CB — Chip Control



□ = Flat top
CB = Chipbreaker
K = Kenna Universal™ chipbreaker

The Kennametal LT Advantage

Every box of 10 inserts includes a free Torx wrench and spare locking screw, except LT-K inserts.

Looking for a product that's not shown in this catalogue?

Check the Kennametal website!

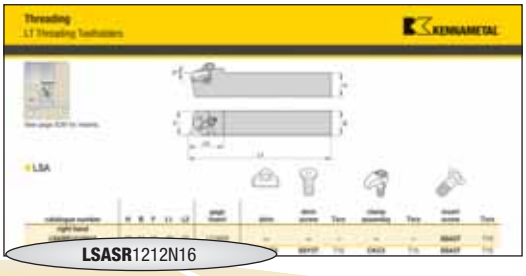
Online product catalogue available 24/7

Visit **http://www.kennametal.com/turning/** to browse our electronic catalogue any time you're looking for Kennametal's best tooling solutions. It's fast, free, and always available. The online e-catalogue is updated weekly with products and solutions for milling, turning, holemaking, and tooling systems applications.

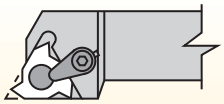
KENNAMETAL

How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



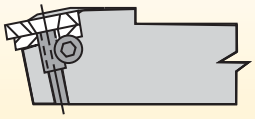
L
Insert Style

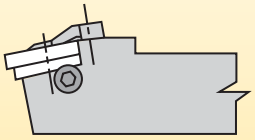


L = Laydown triangle

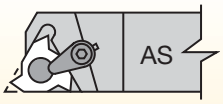
S
Insert Holding Method

S = Insert screw or clamp only

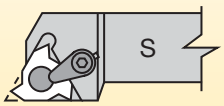




AS
Tool Style



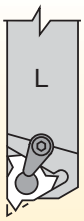
AS = Straight shank



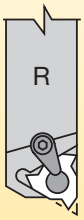
S = Offset shank

R
Hand of Tool

L = Left hand



R = Right hand



NOTE: Toolholders with primary shank sizes larger than 1/2" or 12mm are supplied with clamp and insert screw. Secure the insert with either the clamp or insert screw. **Do not use both.**

LT Threading Shim Catalogue Numbering System

SM
Shim

Y
Shim for LT Standard Inserts

E
Insert Threading

E = External
I = Internal

3
Insert Size

D value in 1/8"

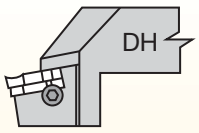
2P
Shim Angle

2P = 2° positive
1P = 1° positive
__ = 0° neutral
1N = 1° negative
2N = 2° negative
3N = 3° negative

NOTE: For shims and shim kits, see pages E101–E103.

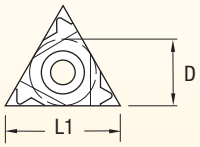
By referencing this easy-to-use guide, you can identify the correct product to meet your needs.

	1212N	**16**	
Drop Head	Shank Size	Insert Size	Qualified Surface and Length



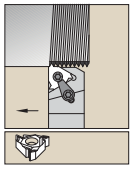
metric:
Shank height and width in mm and holder length according to ISO standard.

Size equals number of 1/8" increments of IC.



insert size (inch)	insert size (mm)	D (inch)	L1 (mm)
2	11	1/4	11,0
3	16	3/8	16,5
4	22	1/2	22,0

- **C** = Qualified back and end, 5" long
- **D** = Qualified back and end, 6" long
- **E** = Qualified back and end, 7" long
- **T** = Qualified back and end, 3.250" long
- **Q** = Qualified metric holder



See page E41 for inserts.

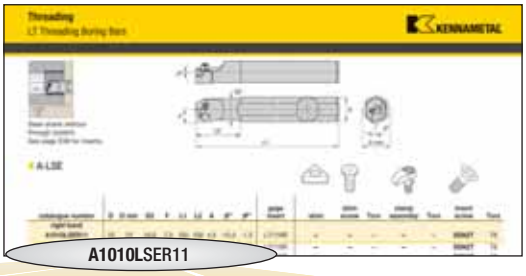
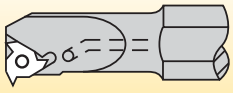
How Do Catalogue Numbers Work?

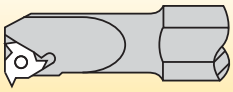
Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



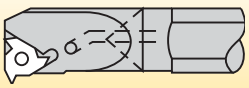
A — Bar Type



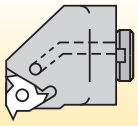
A = Steel with coolant



S = Steel without coolant

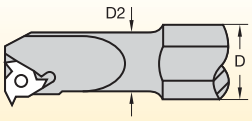


E = Carbide with coolant



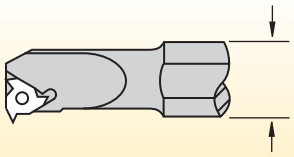
H = Interchangeable head with coolant

10 — Primary Necked Shank Bar Diameter



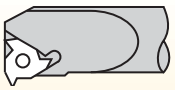
A two-digit number that indicates the primary bar diameter in 1/16" increments. Metric diameter in mm.

10 — Secondary (Mounting) Bar Diameter



A two-digit number that indicates the secondary bar diameter in 1/16" increments. Metric diameter in mm.

L — Insert Style



L = Laydown triangle

NOTE: Boring bars with primary bar diameters larger than 5/8" or 16mm are supplied with clamp and insert screw. Secure the insert with either the clamp or insert screw. **Do not use both.**

LT Threading Shim Catalogue Numbering System

SM — Shim

Y — Shim for LT Standard Inserts

E — Insert Threading

E = External
I = Internal

3 — Insert Size

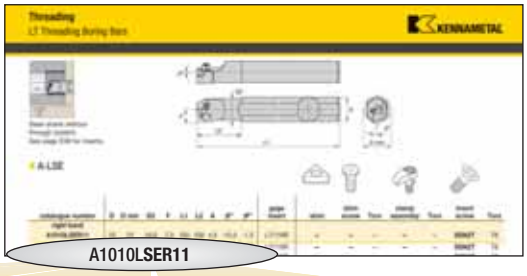
D value in 1/8"

2P — Shim Angle

2P = 2° positive
1P = 1° positive
__ = 0° neutral
1N = 1° negative
2N = 2° negative
3N = 3° negative

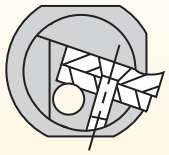
NOTE: For shims and shim kits, see pages E101–E103.

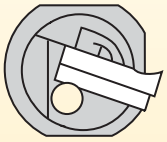
By referencing this easy-to-use guide, you can identify the correct product to meet your needs.



S
Insert Holding Method

S = Insert screw or clamp



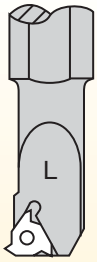


E
Bar Style

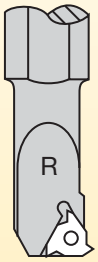
E = End cutting edge mount

R
Hand of Bar

L = Left hand

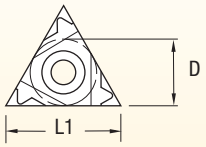


R = Right hand



11
Insert Size

Size equals number of 1/8" increments of IC.



insert size (inch)	insert size (mm)	D (inch)	L1 (mm)
2	11	1/4	11,0
3	16	3/8	16,5
4	22	1/2	22,0

NOTE: Boring bars with primary bar diameters larger than 5/8" or 16mm are supplied with clamp and insert screw. Secure the insert with either the clamp or insert screw. **Do not use both.**

Steel shank without
through coolant.
See page E41 for inserts.

NOTE: When workpiece hardness levels are at the top of a range, starting m/min should be at the lower end. Regularly inspect insert clamps for worn flats.

Edge preparation:
Uncoated — sharp
PVD coated — light hone except positive top rake, top rake-sharp

Tool Detective

problem	cause	possible solution
thread with torn finish	• Burrs. • Torn finish. • Steps.	• Use positive rake or full profile insert. • Increase coolant concentration. • Alter infeed. • Increases m/min. • Check machine “Z” travel axis. • Check insert form. • Check for correct shim in LT system.
chatter	• Poor rigidity. • Incorrect speed. • Insert movement. • Improper infeed. • Off centerline. • Wrong edge prep.	• Minimise tool overhang. • Check for workpiece deflection. • Adjust m/min. • Check insert and clamp. • Use modified feed angle. • Verify that tool cutting position is at workpiece centerline. • Adjust hone level by ordering special insert.
built-up edge	• Speed too low. • Insufficient coolant. • Chip load. • Wrong edge prep.	• Increase m/min. • Increase coolant concentration and/or flow. • Adjust infeed angle. • Increase depth of cut per pass. • Adjust hone level by ordering special insert.
deformation	• Wrong grade. • Speed too high. • Improper infeed angle. • Insufficient coolant.	• Use a more wear-resistant grade (e.g., KC5010™). • Reduce m/min. • Alter infeed method/angle. • Increase coolant flow.
chipping	• Improper infeed. • Chip load. • Wrong grade. • Incorrect speed. • Poor rigidity. • Wrong edge prep.	• Alter infeed to modified flank. • Adjust chip load. • Increase or decrease number of passes. • Eliminate spring passes. • Use tougher grade (e.g., KC5025™). • Increase m/min if chipping on trailing edge. • Decrease m/min if chipping on leading edge. • Minimise tool overhang. • Check for insert movement/check clamp. • Check for possible part deflection. • Adjust hone size by ordering special insert.
broken nose	• Heavy chip load. • Small nose radius. • Wrong grade. • Improper infeed. • Wrong edge prep.	• Decrease chip load. • Use large nose radius if allowable. • Use tougher grade (e.g., KC5025). • Alter infeed to modified flank. • Adjust hone size by ordering special insert.
flank wear	• Wrong grade. • Insufficient coolant. • Off centerline.	• Use a more wear-resistant grade (e.g., KC5025). • Increase coolant flow. • Check the centerline height of the tool. (The smaller the diameter, the more critical the need for centerline accuracy.)

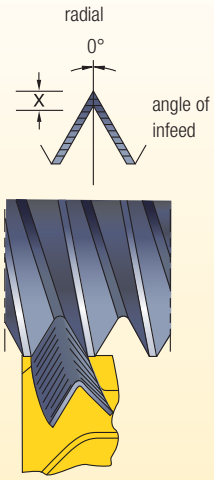
Radial



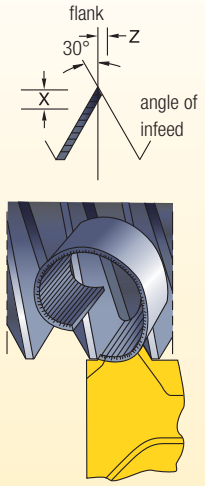
Advantage —

- Cutting on both sides of the thread form places all of the cutting edge in the cut and protects edge from chipping.
- Even wear on the insert.

Disadvantage —

- Tool develops a channel chip that may be difficult to handle.
- Tip chipping occurs when cutting high-tensile materials.
- Burr condition is increased.
- Entire cutting edge is engaged at finish of thread, causing increased tendency to chatter.

Flank



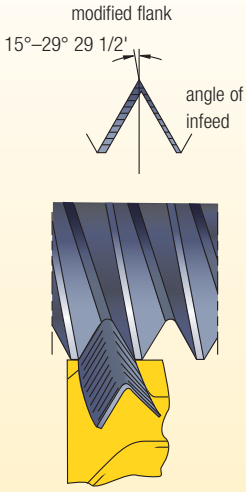
Advantage —

- Cutting with the leading edge of the threading tool gives the chip a definite flow out of the thread form area. This reduces the burr problem on the trailing edge of the tool. To avoid bad surface finish, chipping, or excessive flank wear due to rubbing of the trailing edge, the infeed angle should be 3° to 5° smaller than the angle of the thread. This is a type of modified flank.

Disadvantage —

- Trailing edge of threading insert may drag or rub and tends to chip.
- Torn or poor surface finish threads result when cutting soft, gummy materials like low-carbon steels, aluminium, and stainless steels.

Modified flank



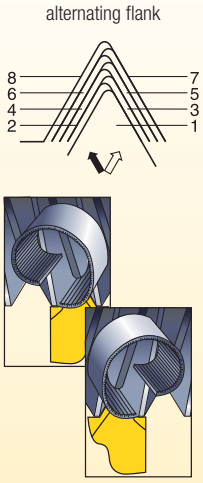
Advantage —

- Tool cuts both sides of thread form, so it is protected from chipping similar to 0° infeed. Channel-type chip develops, but uneven chip thickness helps remove the chip similar to flank infeed.
- This is the preferred method, especially when used with a chip control insert.
- Combined radial and/or alternating flank infeed.
- Results in good tool life, with wear evenly distributed over both flanks.

Disadvantage —

- Similar disadvantages as with 0° infeed, although reduced somewhat in magnitude as cutting forces are better equalised and chip flow is much less of a problem.

Alternating flank



Advantage —

- Increased tool life because both edges are used equally.

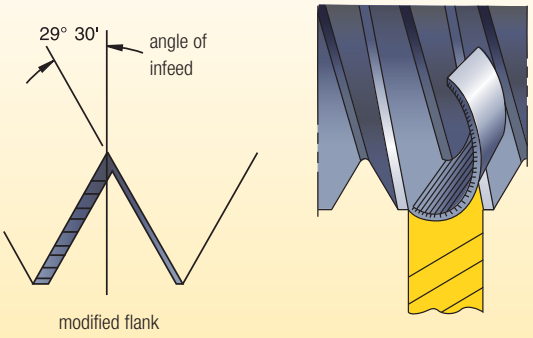
NOTE: Some machine tools may require special programming techniques to achieve this method of infeed.

Disadvantage —

- Difficult to cut on conventional machinery.

Machining Guidelines When Using Chop Control Inserts

Kennametal insert technology brings chip control to your threading operations with the Top Notch™ platform. The proprietary Kennametal recessed chip groove, when used according to our recommendations, breaks the chip in most applications. Our positive rake design lowers cutting pressures, which in turn lowers damaging heat generation thus providing better tool life. Long, stringy chips no longer mar the workpiece surface finish. The danger to operators when removing long chips from the workpiece and chuck is eliminated. All of these benefits combine to improve the productivity of your threading operations.



Machine Programming

Modern CNC controls allow the programmer to easily adjust infeed angle, the number of passes, and depth of cut for each pass. The chip control threading insert performs best at an infeed angle of 29° 30', although 15° to 30° is acceptable. Also, it is important to maintain a minimum of 0,127mm (.005") depth of cut on every pass. In most applications, use of CNC canned cycles produce only marginally successful results. Custom written programs are better and are recommended.

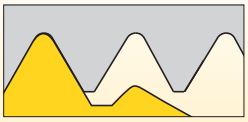
The Last Pass

Some CNC controls require the last pass to be at a 0° infeed angle because the chip will not break on the last pass. On most carbon and alloy steels, the last pass can remain at 0,127mm (.005") depth of cut and produce an acceptable finish. For some materials, a 0,025mm (.001") to 0,076mm (.003") (spring) pass may be used to improve surface finish, however, chip breaking action may be compromised.

Infeed Angle

In order to effectively and consistently break the chip, it is important to use an infeed angle between 28° and 29° 30'. Do not apply chip control inserts at infeed angles less than 15°.

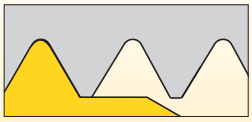
Partial Profile



Tooth profile with universal profile shape:

- 55° or 60° without cutting edges for the tooth tapers.
- Reduced inventory.
- For various pitches in a limited range.
- Preferably one time production.
- Outside/core diameters must be accurately pre-turned.

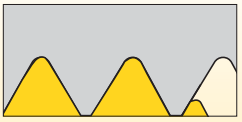
Full Profile



Tooth profile with full profile shape including tooth height:

- For burr-free, precise threads in the specified pitch.
- General application.
- Machining allowance for outside/core diameter around 0.004–0.006".

Multitooth Profile



Multitooth full profile generally with 2–3 teeth:

- Highly productive threading with fewer passes and longer tool life.
- Requires a rigid setup and long thread runout.
- Minimum clearance width approximately 1.25 x E as per indexable insert dimensions table.

Formulas

metric formula		
to find	**given**	**formula**
m/min	D (mm) RPM	$m/min = \frac{\pi \times D}{1000} \times RPM$
RPM	D (mm) m/min	$RPM = \frac{m/min \times 1000}{D \times \pi}$

Legend

IPM = inch per minute
SFM = surface feet per minute
m/min = metres per minute
RPM = revolutions per minute
D = part diameter
π = 3.1416

Maximum Cutting Speeds

Maximum cutting speed is often limited by the maximum travel speed (IPM or mm/min) of the tool allowed by the machine. Check your maximum speed with the following formulas:

metric formula: maximum cutting speed (m/min) = part diameter (mm) x 3.14 x (1/pitch) x $\frac{\text{max mm/min}}{1000\text{mm}}$

Recommendation for Threading Infeed Passes

TPI	48–32	28–24	20–16	14–12	11.5–9	8–6	5–4	3–2
metric pitch (mm)	0,50–0,75	0,80–1,0	1,25–1,5	1,75–2,0	2,5–3,0	3,5–4,0	4,5–6,0	8,0

thread type	recommended number of passes							
Common V-thread forms ISO, UN, UNJ, NPT, Whitworth, BSPT, API Rotary Shoulder	4–5	5–6	6–8	8–10	9–12	12–15	14–16	15–25
Acme, Trapez, Round, API Round	—	—	5–6	7–8	10–11	12–13	13–15	18–20
Stub Acme, API Buttress	—	—	5	5–6	7–8	8–10	10–12	14–16
American Buttress	—	—	7–8	9–10	11–12	13–15	17–19	22–24

NOTE: Maintain minimum 0,05mm (.002") infeed on last passes to avoid work hardening and excessive abrasion of the threading tool.

Constant Volume Infeed Values for Threading Operations

In most applications, use of CNC canned cycles produces only marginally successful results. This is the case as these programs do not satisfy the 0,05mm (.002") minimum depth of cut specification recommended.

Example:

Infeed per pass formula: accumulated depth = initial DOC x √ # pass

For example, an 8-pitch external thread has a depth of 2mm (.0789").
25% of 2mm (.0789") = approximately 0,50mm (.0197")
(This is the infeed/DOC for the first pass.)

0,500mm (.0197") x √ 2 = 0,708mm (.0278")
0,708mm (.0278") - 0,500mm (.0197") = 0,207mm (.0082")
(This is the infeed/DOC for the second pass.)

0,500mm (.0197") x √ 3 = 0,867mm (.0341")
0,867mm (.0341") - 0,708mm (.0278") = 0,159mm (.0063")
(This is the infeed/DOC for the third pass.)

0,500mm (.0197") x √ 4 = 1,001mm (.0394")
1,001mm (.0394") - 0,867mm (.0341") = 0,134mm (.0053")
(This is the infeed/DOC for the fourth pass.)

Using Radial Infeed

Bending stress on the cutting edge caused by V-shaped chips from long-chipping steel workpiece materials.

High cutting forces with small cutting thicknesses require sharp edges with high strength.

Its application is recommended for tough and hard, wear-resistant carbides with good resistance to thermal and mechanical shocks.

Using Flank Infeed

Lower bending stress and stabilised cutting edges produce more favourable chip shapes and larger cutting thicknesses.

Carbides with high hardness, good wear resistance, and temperature stability are advantageous.

When turning short threads with short engagement times, there is a good resistance to thermal and mechanical shocks.

Guidelines for Infeeds: How to Determine the Number and the Size of Passes

The number of passes “s” per thread is decisive for successful threading and crest turning. The following tables give standard values for the application condition when machining steel. The proper number of passes must be determined empirically.

If insert breakage occurs, the number of passes must be increased.
With increased wear, we recommend decreasing the number of passes.
The chip thickness should not be less than 0,05mm (.0019").
The allowance at the diameter should not exceed 0,2mm (.0078").

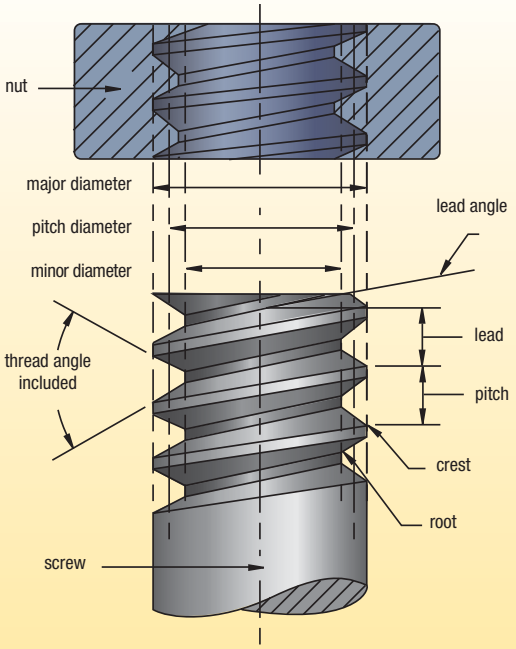
Screw Thread Definitions

1. **Major diameter —** The largest diameter of a straight screw thread. This applies to both internal and external threads.
2. **Pitch diameter —** On a straight thread, it is the diameter which passes through the thread profiles at such points which make the thread width of the groove equal to one-half of the basic pitch. On a "perfect thread," this occurs at the point where the widths of the thread and groove are equal.
3. **Thread angle (included) —** The included angle between the individual flanks of the thread form.
4. **Minor diameter —** The smallest diameter of a straight screw thread. This applies to both internal and external threads.
5. **Lead angle —** On a straight thread, the lead angle is the angle created by the helix of the thread at the pitch diameter with a plane perpendicular to the axis.
6. **Lead —** The distance a screw thread advances axially in one revolution. On a single start, the pitch and lead are identical. The lead is equal to the pitch times the number of starts.
7. **Pitch —** The distance from a point on a screw thread to a corresponding point on the next thread measured parallel to the thread axis.
8. **Crest —** The outer most surface of the thread form which joins the flanks.
9. **Root —** The inner most surface of the thread form which joins the flanks.

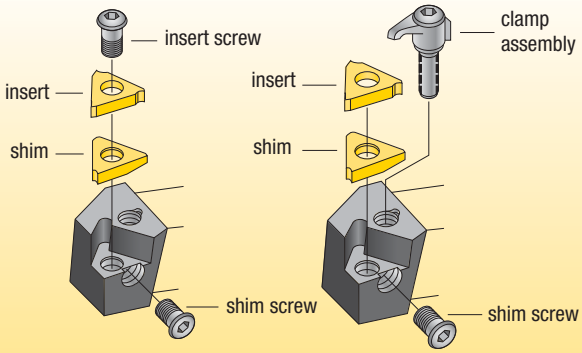


NOTE: Threads per inch (TPI) not shown:
The number of threads per inch measured axially.
The terms pitch and TPI are often used interchangeably.
TPI = 1/pitch

LT Threading Toolholders

In all cases, the proper shim selection is important.

Kennametal toolholders are supplied with a shim for a 1,5° lead angle. Change the shim if your thread is more than 1° different. For more details on proper shim selections, see pages E101–E103.



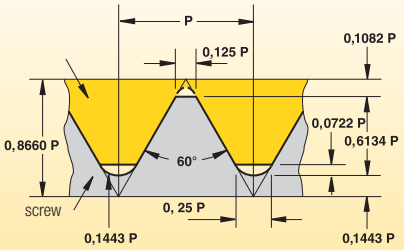
LT Threading Shim Catalogue Numbering System

1-1/4	8	UNX	2	A	LH	(21)
Thread Size	Number of threads per inch	Thread form, series, and tolerance formulation symbol	Thread Class **1** = Allowance and tolerance **2** = Allowance and tolerance **3** = Tolerance only **4** = Interference fit	**A** = External thread **B** = Internal thread	**LH** = Left-hand thread (threads are right hand unless specified)	Thread Gaging System **21** = **22** = Per ANSI B1.3 **23** =

NOTE: For shims and shim kits, see pages E101–E103.

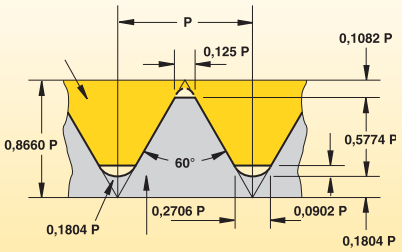
Common Thread Forms

ISO M (Metric) and UN (Unified National)



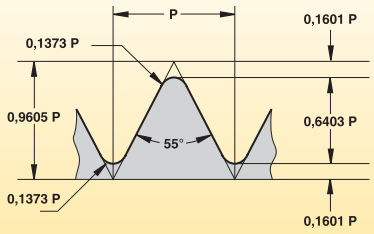
Use: All branches of mechanical industry.

UNJ (controlled root radius)



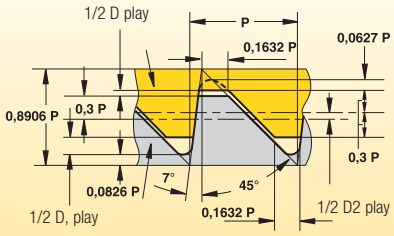
Use: Aircraft and space industry.

Whitworth (BSW)



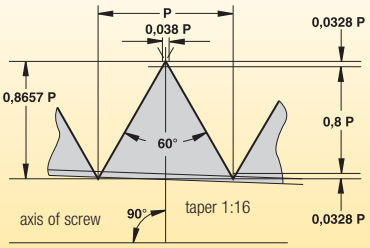
Use: Fittings and pipe couplings for gas, water, and sewer lines (replaced by ISO).

American Buttress



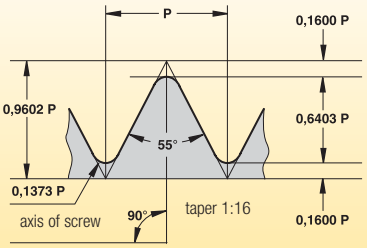
Use: Fittings and pipe couplings.

NPT (American National Pipe Thread)



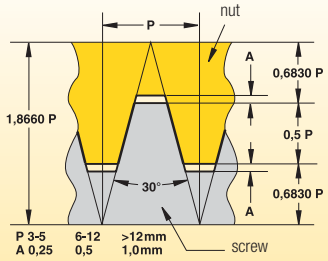
Use: Fittings and pipe couplings.

BSPT (British Standard Pipe Thread)



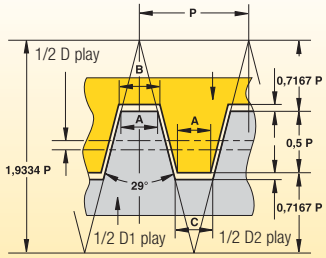
Use: Pipe thread for steam, gas, and water lines.

TR DIN 103



Use: Mechanical industry for motion transmission screws.

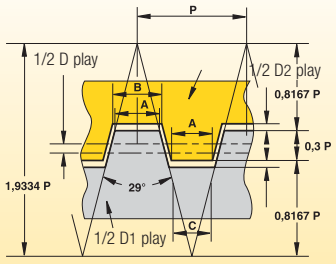
Acme



A = 0,0307 P
B = 0,3707 P—x D play
C = 0,3707 P—(D1 play—D2 play)

Use: Acme-General is used in mechanical industry for motion transmission screws.

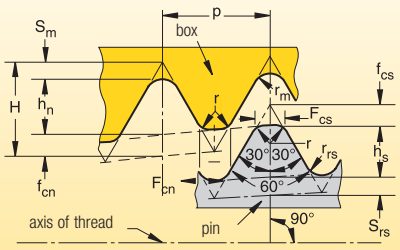
Acme, truncated (Stub)



A = 0,4224 P
B = 0,4224 P—x D play
C = 0,4224 P—(D1 play—D2 play)

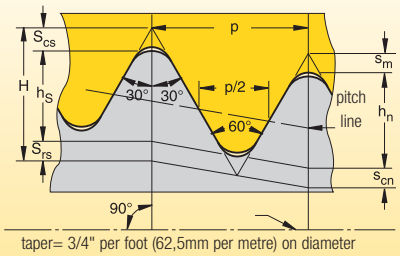
Use: Where normal Acme is too deep.

API Rotary Shoulder Connection



NOTE: Taper shown exaggerated.

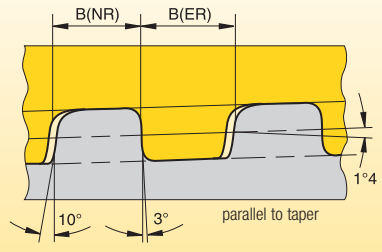
API Casing and Tubing Round Thread Form



taper= 3/4" per foot (62,5mm per metre) on diameter

NOTE: Taper shown exaggerated.

API Buttress



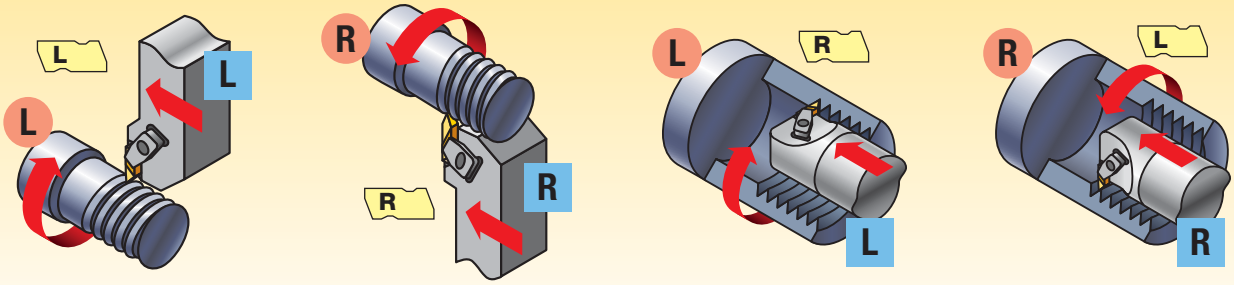
Threading Method and Hand of Tooling

Required Information:

- External/internal operation.
- Spindle rotation/hand of thread.
- Feed direction.

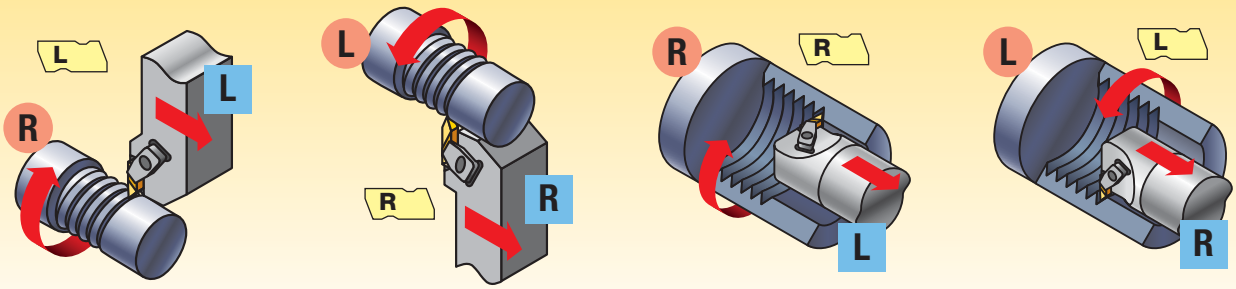
hand of thread | hand of toolholder | hand of insert

Feed Direction Toward the Chuck • Standard Helix



external left-hand thread | external right-hand thread | internal left-hand thread | internal right-hand thread

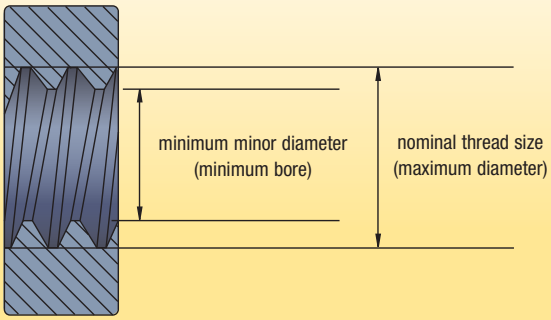
Feed Direction Away from the Chuck • Reverse Helix



external right-hand thread | external left-hand thread | internal right-hand thread | internal left-hand thread

NOTE: Top Notch threading bars require opposite hand insert and clamp.
Right-hand bar requires left-hand insert and clamp.
Left-hand bar requires right-hand insert and clamp.

The following charts list the largest thread pitch that can be applied on internal applications using Top Notch threading inserts for 60° V-threading and Acme threading.



Inch-Sized 60° V-Threading Limits

internal threading limitations
NT-1, NT-2 V-threading inserts

TPI	nominal thread size		minimum minor diameter (inch)	
	NT-1	NT-2	NT-1	NT-2
6	1-7/8	—	1.695	—
7	1-3/4	—	1.595	—
8	1-5/8	—	1.490	—
9	1-9/16	—	1.442	—
10	1-1/2	15/16	1.392	.830
11	1-7/16	15/16	1.339	.830
11-1/2	1-3/8	15/16	1.281	.830
12	1-3/8	9/16	1.285	.472
13	1-5/16	9/16	1.229	.472
14	1-1/4	9/16	1.173	.472
16	1-1/4	9/16	1.182	.472
18	1-1/8	9/16	1.065	.472
20	1-1/8	1/2	1.071	.440
24*	1-1/16	1/2	1.017	.440

*Twenty-four threads per inch and finer can be cut with an NT-2 insert provided the minor diameter is 25mm or larger (11,18mm or larger with NT-1).

internal threading limitations
NT-3, NT-4 V-threading inserts

TPI	nominal thread size	minimum minor diameter (inch)
4**	3	2.729
4-1/2**	2-7/8	2.634
5	2-3/4	2.534
6	2-1/2	2.320
7	2-1/4	2.095
8	2	1.865
9	1-15/16	1.817
10	1-7/8	1.767
11	1-13/16	1.714
11-1/2	1-3/4	1.656
12	1-3/4	1.660
13	1-5/8	1.542
14	1-9/16	1.485
16*	1-7/16	1.370

*Sixteen threads per inch and finer can be cut provided minor diameter is 34,8mm or larger.
**NT-4 insert only.

Metric-sized 60° V-Threading Limits

internal threading limitations
NT-1, NT-2 60° V-threading inserts

TPI	nominal thread size		minimum thread diameter (mm)	
	NT-1	NT-2	NT-1	NT-2
4,00	M48 x 4.00	—	43,67	—
3,00	M42 x 3.00	—	38,75	—
2,50	M39 x 2.50	M24 x 2,50	36,29	21,29
2,00	M33 x 2.00	M15 x 2,00	30,84	12,84
1,75	M32 x 1.75	M15 x 1,75	30,11	13,11
1,50	M32 x 1.50	M15 x 1,50	30,38	13,38
1,25	M29 x 1.29	M14 x 1,25	27,65	12,65
1,00*	M27 x 1.00	M14 x 1,00	25,92	12,92
0,75	M22 x 0.75	M12 x 0,75	21,19	11,19

*Thread pitch of 1mm and less can be cut with an NT-2 insert provided the core thread diameter is 25mm or larger (11mm or larger with NT-1).

internal threading limitations
NT-3, NT-4 60° V-threading inserts

TP	nominal thread size	minimum thread diameter (mm)
6,00**	M76 x 6.00	69,50
5,50**	M73 x 5.50	67,05
5,00	M70 x 5.00	64,59
4,00	M64 x 4.00	59,67
3,00	M52 x 3.00	48,75
2,50	M48 x 2.50	45,29
2,00	M42 x 2.00	39,84
1,75	M40 x 1.75	38,11
1,50*	M38 x 1.50	36,38

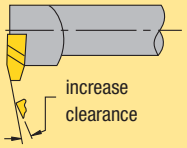
*Thread pitch of 1,5mm and less can be cut provided core thread diameter is 35mm or larger.
**NT-4-insert only.

Acme Threading Limits

internal threading limitations
NA and NAS-2, -3, -4, and -6 Acme threading inserts

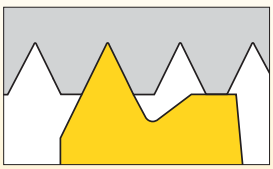
TPI	nominal thread size	minimum thread diameter	
		NT-1	NT-2
2**	5	4.500	114,3
2-1/2**	4-1/2	4.100	104,1
3**	4	3.665	93,1
4	3-1/2	3.250	82,6
5	3	2.800	71,1
6	2-1/2	2.333	59,3
8	2-1/4	2.125	54,0
10	2	1.900	48,3
12	1-3/4	1.667	42,4
14	1-5/8	1.554	39,5
16*	1-1/2	1.438	36,5

*Sixteen threads per inch and finer can be cut provided minor diameter is 36,5mm (1.438") or larger.
**NA-6 insert only.



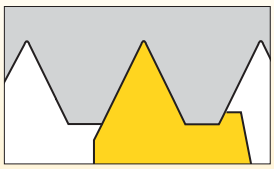
Additional secondary clearance can be ground on leading edge of insert to provide sufficient helical clearance for machining coarser threads and multistart threads. Modified standard inserts may be furnished for machining threads outside of the limits shown.

60° V-Thread Crest Turning Application Data



feed direction

NTC crest turning insert for 12 threads per inch and finer (P ≤2mm)



feed direction

NTC crest turning insert for 11 threads per inch and coarser (P ≥3mm)

"J" thread note for catalogue

The controlled root radius thread form (SAE8879C) is defined for the external thread only. To machine the corresponding internal thread, choose any insert that will cut a unified class 2B thread, then bore the minor diameter to size. Refer to SAE8879C and MIL-S-8879C and SAEAS8879D for the correct "J" thread minor diameter values.

Controlled Root Radius Specifications for UNJ Threads

insert catalogue number	nose radius on insert	thread radius per MIL-S-8879A
NJ-3020R/L8 NJP-3020R/L8	0,477/0,502	0,477/0,574
NJ-3014R/L12 NJP-3014R/L12	0,317/0,342	0,317/0,381
NJ-3010R/L16 NJP-3010R/L16	0,238/0,264	0,238/0,287
NJF-3012R/L14 NJK-3012R/L14	0,271/0,297	0,271/0,327
NJF-3010R/L16 NJK-3010R/L16	0,238/0,264	0,238/0,287
NJF-3009R/L18 NJK-3009R/L18	0,210/0,236	0,210/0,254
NJF-3008R/L20 NJK-3008R/L20	0,190/0,215	0,190/0,228
NJF-3007R/L24 NJK-3007R/L24	0,160/0,185	0,160/0,190
NJF-3006R/L28 NJK-3006R/L28	0,137/0,162	0,137/0,162
NJF-3005R/L32 NJK-3005R/L32	0,119/0,142	0,119/0,142

NOTE: NTC inserts automatically control root to crest dimensions. Therefore, in setting up threading operations with NTC inserts, check the O.D. or I.D. at the thread crest for correct dimensions.

60° V-Thread Application Data

insert description	insert	D** (mm)	E** (mm)	recommended TP*		recommended TPI*

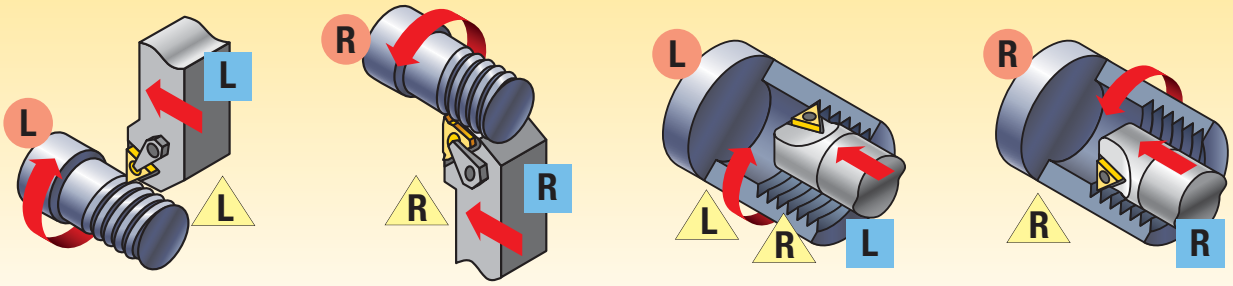
12	1-5/8	1.525
16	1-1/2	1.407
20	1-7/16	1.378

*NTB-4B insert only.

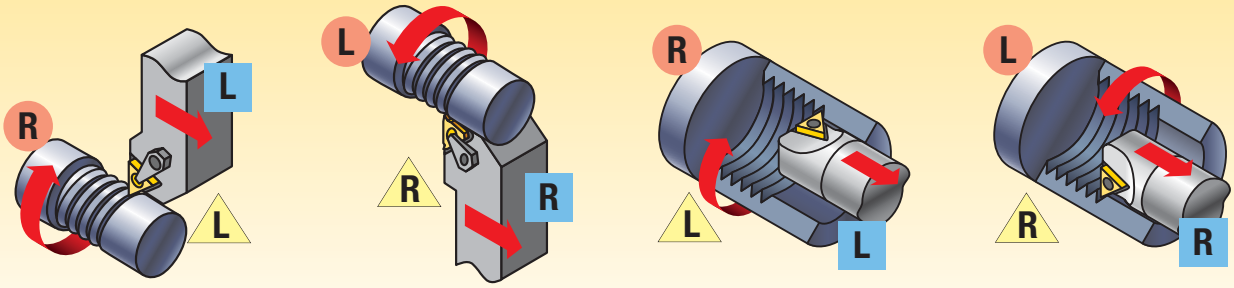
Required Information:

- External/internal operation.
- Spindle rotation/hand of thread.
- Feed direction.

Feed Direction Toward the Chuck • Standard Helix



Feed Direction Away from the Chuck • Reverse Helix



NOTE: Right-hand toolholders and bars use right-hand inserts.
Left-hand toolholders and bars use left-hand inserts.

External Threading Operation Example

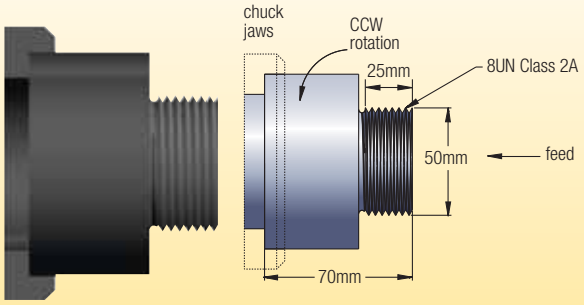
Required Information

From Part Drawing:

material: 316SS, 200 HB
thread form: 8UN Class 2A
operation: external threading
pitch diameter: 50mm x 25mm deep

From Machine Setup Data:

tooling: 20mm x 20mm
spindle rotation: anti-clockwise
feed: toward chuck

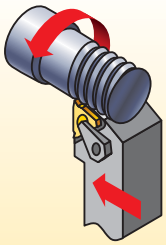


Steps for a Successful Threading Operation

Step 1 • Determine Threading Method

Need to Know:

- Operation (external).
- Spindle rotation (CCW).
  Anti-clockwise rotation.
- Feed direction (toward chuck).
- Right-hand toolholder.
- Right-hand insert (ER).
- Standard helix method.



Step 2 • Select Insert

Need to Know:

- Thread form (8 UN Class 2A).
- Hand of insert (right hand — ER).

Choose the High-Performance Solution

catalogue number	insert size	KC5010
3ER8UN	3"	●

High-Performance Selection

NOTE: Use insert with largest IC available.

insert: LT-16ER-8UNCB
grade: KC5010
speed: 150 m/min

Step 3 • Select the Grade and Speed

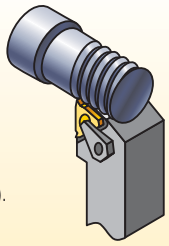
Need to Know:

- Workpiece material (316SS-200HB).
- Operation (external).

Options: Grade and Speed Selection Guidelines

threading operation	stainless steel	
external	general purpose	style
	KC5025	CB
	50–360 m/min	
	high-performance	style
	KC5010	CB
	70–390 m/min	

Step 4 • Select Toolholder



Need to Know:

- External or internal operation (external).
- Pitch diameter to determine minimum bore diameter (N/A).
- Type of tooling — toolholder, boring bar (toolholder).
- Hand of tool (right hand).
- Insert size (16).

Options:

catalogue number	gage insert	shim
LSASR-123	LT-16ER	SM–YE3
LSSR-123	LT-16ER	SM–YE3

First choice: LSASR-123 holder

Step 5 • Select Shim

Need to Know:

- Thread form — TPI or pitch (1mm).
- Pitch diameter (50mm).
- Helix method (standard).
  See LT shim selection chart.

Select SM-YE3 shim

NOTE: The SM-YE3 shim is supplied with the selected toolholder.

NOTE: Optimise your operation by using a constant infeed or the constant volume method with a minimum infeed of .005 and an infeed angle of 29-1/2°.

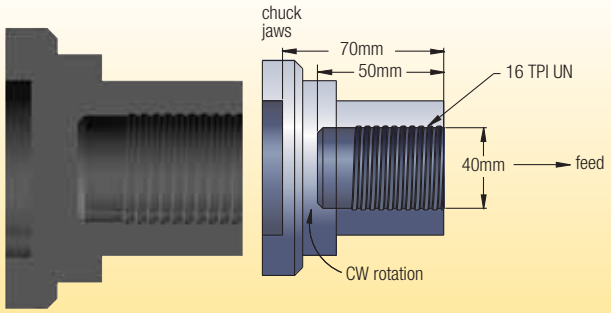
Required Information

From Part Drawing:

material: 4140 steel
thread form: 16 TPI UN
operation: internal threading
pitch diameter: 40mm x 50mm deep

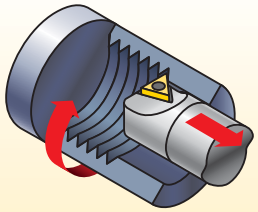
From Machine Setup Data:

tooling: 20mm boring bar
spindle rotation: clockwise
feed: away from chuck



Steps for a Successful Threading Operation

Step 1 • Determine Threading Method



Need to Know:

- Operation (internal).
- Spindle rotation (CW).
  Clockwise rotation.
- Feed direction (away from chuck).
- Left-hand toolholder.
- Left-hand insert (NL).
- Reverse helix method.

Step 2 • Select Insert

Need to Know:

- Thread form (16UN Class 2A).
- Hand of insert (left hand — NL).

Choose the High-Performance Solution

catalogue number	insert size	KC5025
LT-11NL-16UN	1/4"	●
LT-16NL-16UN	3/8"	●

High-Performance Selection

NOTE: Use insert with largest possible IC to go into the bore.

insert: LT-16NL-16UN
grade: KC5025
speed: 130 m/min

Step 3 • Select the Grade and Speed

Need to Know:

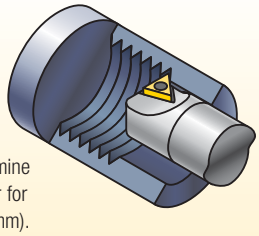
- Workpiece material (4010 steel).
- Operation (internal).

Options: Grade and Speed Selection Guidelines

threading operation	steel
internal	general purpose and high performance
	KC5025
	40–200 m/min

Optimise your operation by using a constant infeed or the constant volume method with a minimum infeed of .005 and an infeed angle of 29-1/2°.

Step 4 • Select Toolholder



Need to Know:

- External or internal operation (internal).
- Pitch diameter to determine minimum bore diameter for internal operations (40mm).
- Type of tooling — toolholder, boring bar (boring bar).
- Hand of tool (left hand).
- Insert size (16).

Options:

catalogue number	insert size	minimum bore diameter	shim
S1212-LSEL3	3"	.90	SM-YE3
S0812-LSEL2	2"	.65	—

First choice: S1212-LSEL3 bar

Step 5 • Select Shim

Need to Know:

- Thread form — TPI or pitch (16 TPI).
- Pitch diameter (40mm).
- Helix method (reverse).
  See LT shim selection chart.

Select SM-YE3-2N shim

NOTE: Shim supplied with selected boring bar is not correct; order correct shim.

LT Threading Shim Selection Guidelines

The following questions must be answered before a successful threading operation can begin:

A — Select your method of thread cutting:
- Machining toward the chuck (standard helix).
- Machining away from the chuck (reverse helix).

B — Select lead angle and choose shim.

C — Select insert and toolholder size.

D — Select insert grade.

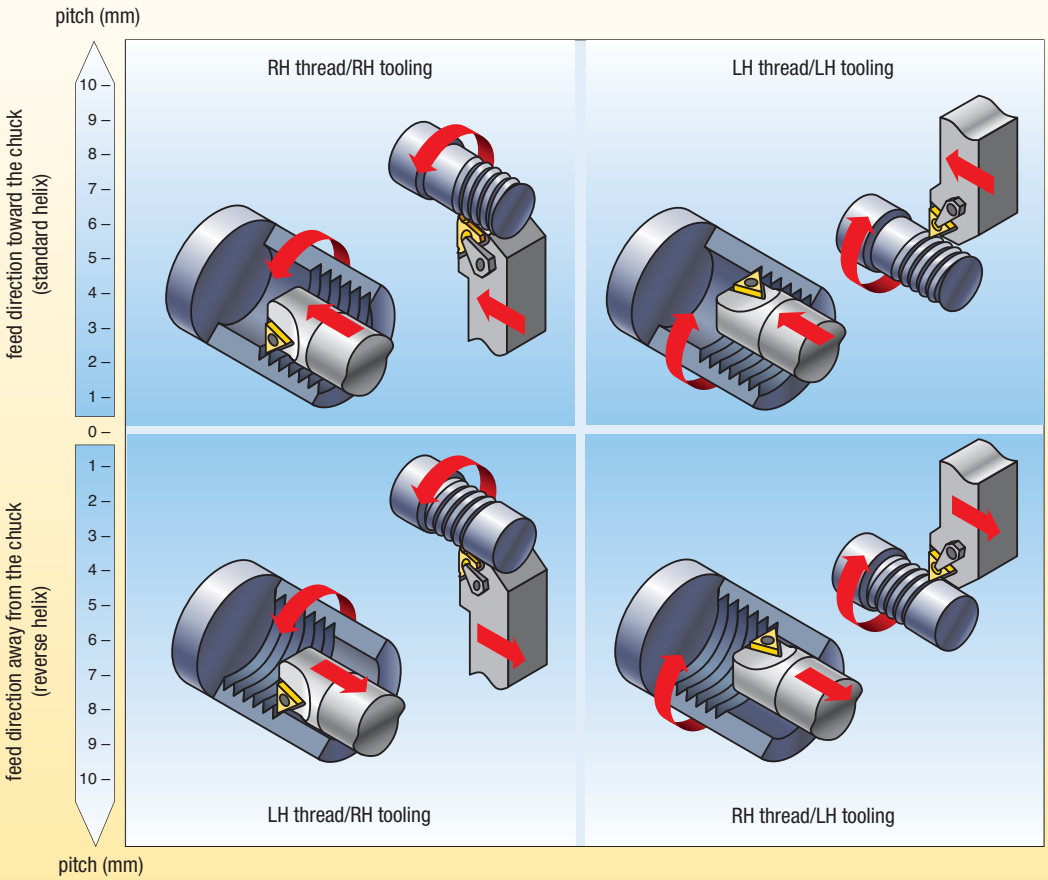
E — Select speed.

F — Select number of thread passes.

G — Select infeed method.

NOTE: When considering method of thread cutting, the part's shape and stability and the flow of chips are determining factors in your decision.

LT Selection Chart



NOTE: For multistart threads, use the lead value instead of the pitch.

Diagram of Thread Lead Angles

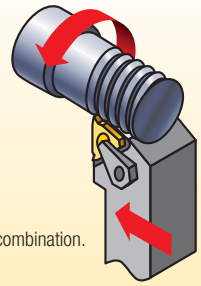
To calculate the lead angle of a given thread, use this formula:

$$\beta = \text{Arctan} \frac{P \bullet S}{\pi D_e}$$

ß = thread lead angle
De = effective pitch diameter of thread wear
P = 1/TPI
TPI = threads per inch
S = number of starts
single-start, lead = pitch
multistart, lead = pitch (x) number of starts

All toolholders are designed with an inclination angle = 1.5°. When turning standard threads with a lead angle of 1–2°, this guarantees adequate clearance at the flanks of the insert's thread tooth. The thread lead angle and the required inclination angle of the insert are given by ß.

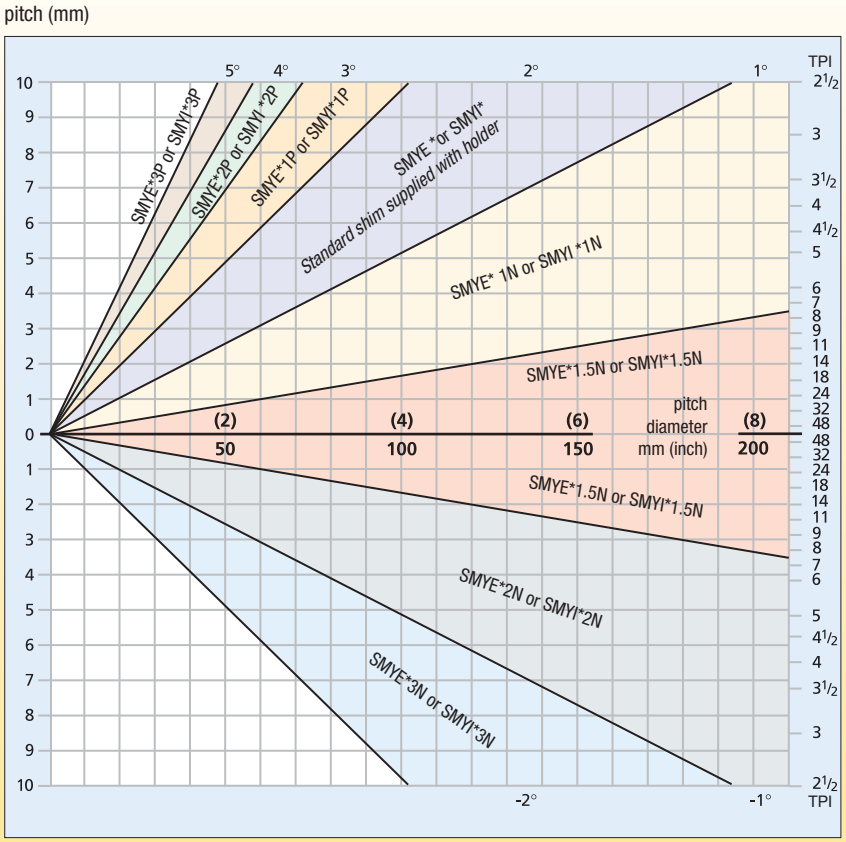
Cutting edge height is constant at every shim and insert combination. All toolholders are supplied with 1-1/2° lead angle.



NOTE: Arctan equals Tan-1 (see chart below for approximate lead angles).

Threading

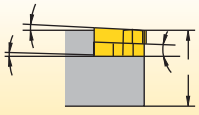
LT Selection Chart



*denotes shim size: 3 = insert size 16 (3/8" D)
4 = insert size 22 (1/2" D)

Standard Helix Method:

Used when RH thread is cut with RH tool or LH thread with LH tool.



Reverse Helix Method:

Used when RH thread is cut with LH tool or when LH thread is cut with RH tool. Dimension "H" is constant at every shim and insert combination. All toolholders are supplied with 1.5º lead angle.

Beyond BLAST™ • The First Through-Insert Coolant Delivery System from Kennametal

We didn't just improve metalcutting technology. We reinvented it.

Introducing Beyond BLAST, a revolutionary insert platform that delivers many of the benefits of high-pressure systems at conventional coolant pressures. Advanced coolant-application technology makes cutting more efficient and effective — while extending tool life. This tool is specifically designed for working with titanium and other high-temp alloys.

Features and Benefits

Higher Productivity, Extended Tool Life

- Increased tool life up to 300%, depending on the insert geometry and cutting conditions.
- Significant productivity and tool life increase in titanium machining.
- Higher metal removal rates and reduced cycle time.
- Chipbreaker design in combination with Precision Coolant Technology (PCT) provides excellent chip control and workpiece finish.

Versatility

- Ideal for applications where productivity or tool life is limited due to excess generated heat.
- Offered as a standard item with engineered solution capabilities.
- Provides increased performance with high-pressure or low-pressure coolant delivery systems.

More than just the right tool — the ultimate solution. That's **Beyond BLAST.™**

That's **Different Thinking.**

A Simple Observation, a Revolutionary Concept

We took an entirely different approach to machining high-temperature alloys. We determined that the most effective way to deliver coolant would be to channel it through the insert — ensuring that it hits exactly where it does the most good. That means more efficient coolant delivery at a fraction of the cost of high-pressure coolant systems.

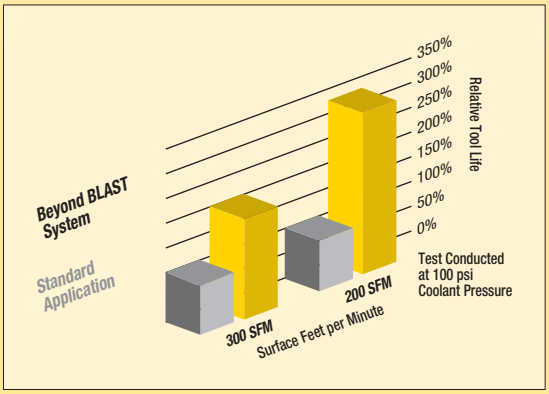
By precisely controlling coolant application, Beyond BLAST™ allows you to lower your energy consumption, saving you even more money and reducing your impact on the environment.

*To learn more, **scan here**.*
For instructions on how to scan, please see page xxix.

Beyond BLAST System

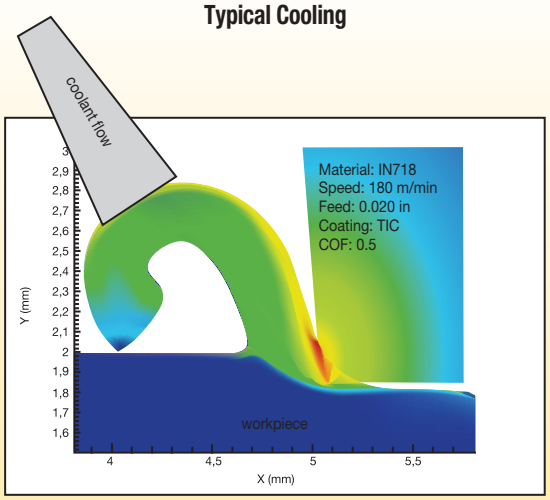
- Beyond BLAST delivers coolant directly and precisely to the cutting edge.
- Effective thermal management, higher speeds and reduced cycle times can be achieved.
- Delivers many of the benefits of high-pressure systems at low pressure.
- Provides increased performance with high-pressure or low-pressure coolant delivery systems.

Beyond BLAST for turning increases tool life by up to 300% compared with conventional coolant delivery systems.



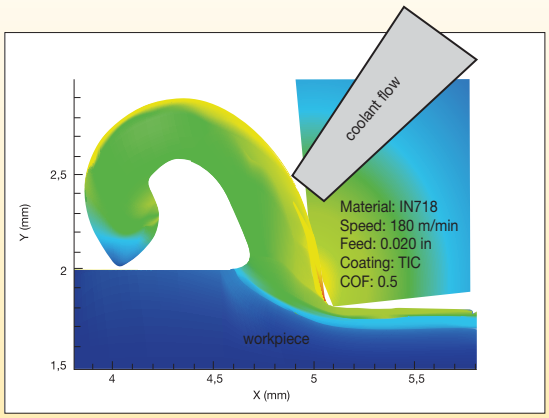
Coolant Application

Typical Cooling



Typical cooling applications often miss the point of highest heat, generated where the tool shears the material. Hitting chips after they have formed proves typical cooling applications can even work at cross-purposes by forcing chips back into the cut, accelerating tool wear. Part of the problem is that the coolant-delivering nozzle is located relatively far from the workpiece.

Through Insert Cooling



Beyond BLAST with Precision Coolant Technology (PCT)

With Beyond BLAST, coolant is delivered through the insert, at the interface of the tool and the workpiece material, offering the best of both worlds.

Beyond BLAST with Precision Coolant Technology (PCT) features through-insert cooling. It delivers coolant much closer to the tool/chip interface. Coolant pressure remains adjustable. Since the coolant is delivered through the insert, coolant delivery is more reliable and controlled, significantly reducing temperatures at the point of the cut.

Application Data

The illustrations below show Beyond BLAST turning inserts and the coolant delivery path through the turning holder and insert.

In tests involving titanium turning, Beyond BLAST inserts at 100 psi showed 75% improvement in tool life over the same inserts with flood coolant at 100 psi. In a different test to evaluate the influence of coolant pressure, tool life for Beyond BLAST at 100 psi was nearly that of identical insert geometries at 1.000 psi, delivering cutting conditions and longer tool life on par with expensive, custom high-pressure coolant delivery systems at significantly lower cost.

	Test 1 62 m/min (200 SFM)	Test 2 93 m/min (300 SFM)
Cutting Conditions and Parameters • CNMG432MBB • KCU10™

Application Specific

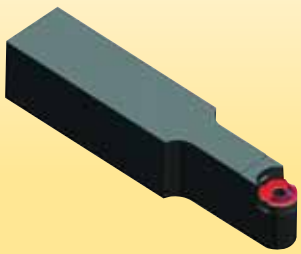
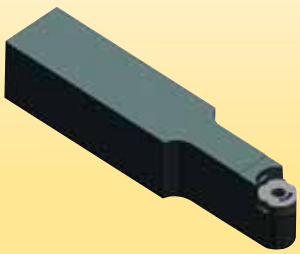
The shim for Beyond BLAST can be flipped depending on the operation being performed.

Use the wider coolant channel to cover larger areas in profiling operations.



Coolant comes out from the top of the shim in turning operations.



Place the shim to direct coolant to the side for facing operations.

The Fix-Perfect™ Precision Ground Insert Program Goes Above and Beyond™!

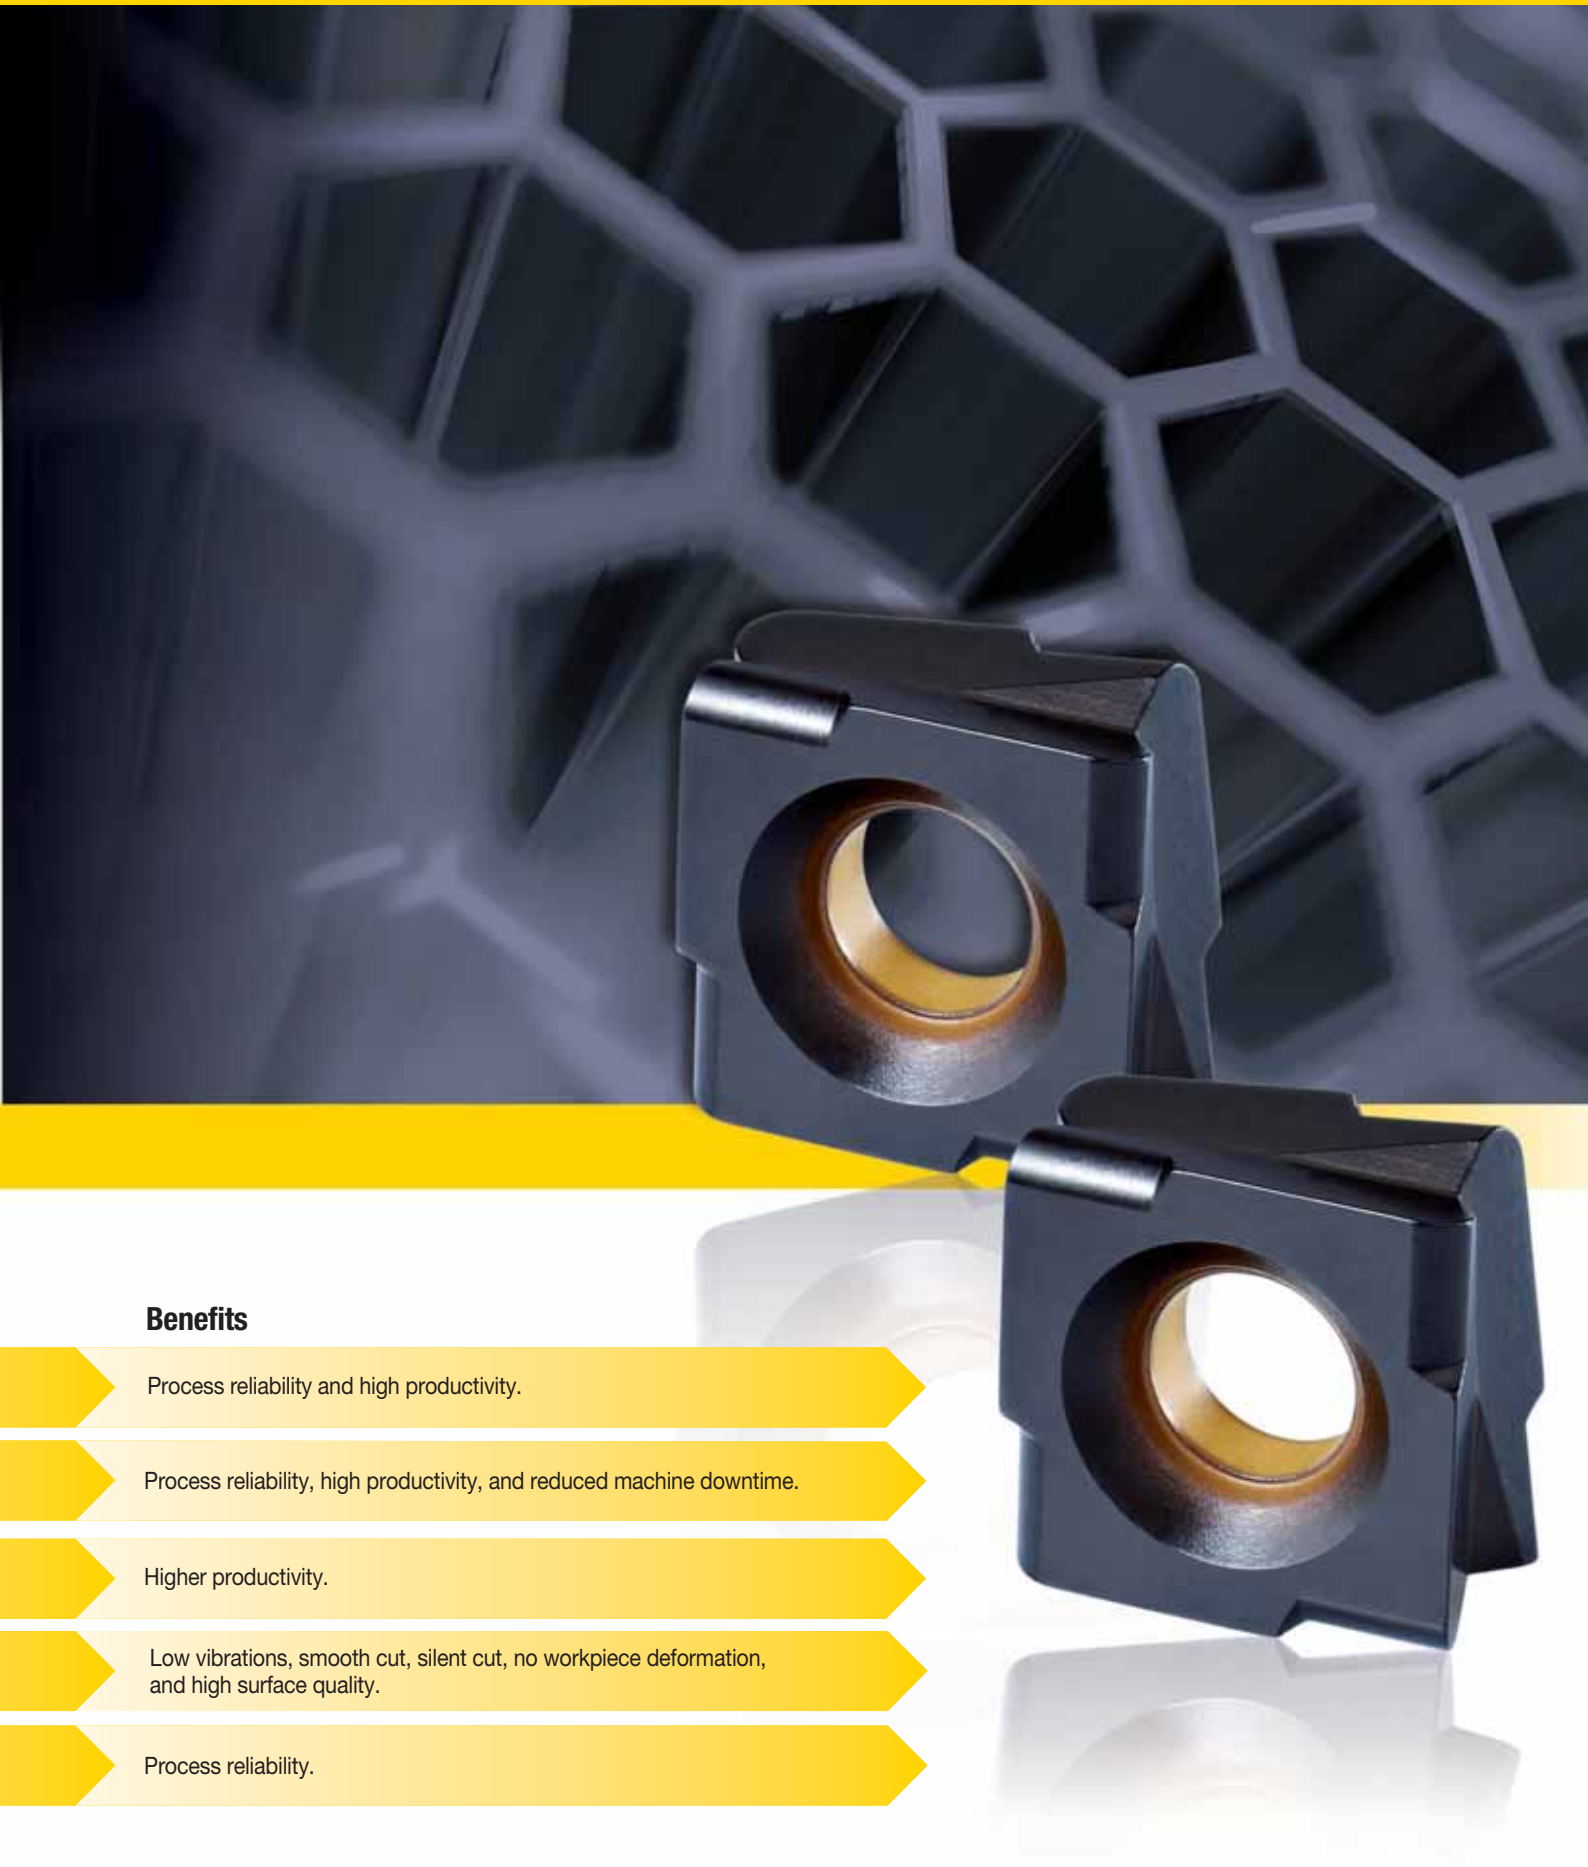
Primary Application

The breakthrough performance characteristics of these precision ground inserts enable outstanding indexing accuracy and excellent chip flow when machining steel, cast iron, and stainless steel workpiece materials.

Fix-Perfect Beyond Inserts are the ideal solution to machining operations in a multitude of industries, including fluid power, energy, automotive, heavy equipment, and general engineering applications.

Features and Benefits

Features	Functions
Tangential design.	Stable system.
Rigid clamping system.	Very stable clamping system and quick and easy cutting edge switch.
Up to eight cutting edges (protected by pocket seat).	Use up to eight edges per insert.
Positive geometry.	Very low cutting forces and excellent chip control.
Precision ground insert.	Better indexing accuracy.



Benefits

- Process reliability and high productivity.
- Process reliability, high productivity, and reduced machine downtime.
- Higher productivity.
- Low vibrations, smooth cut, silent cut, no workpiece deformation, and high surface quality.
- Process reliability.

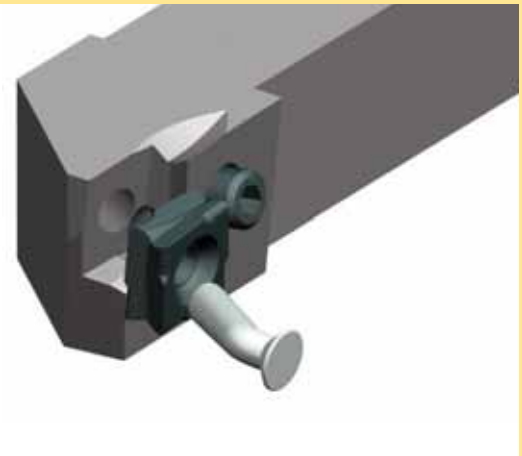
Fix-Perfect Tool System



With 2, 4, or 8 edges, this tool system is the ideal supplement to ISO tools.

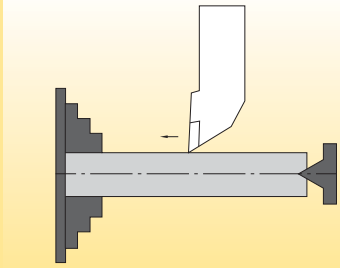
The examples on the following page show the range of possible applications.

Use of the Fix-Perfect system results in:

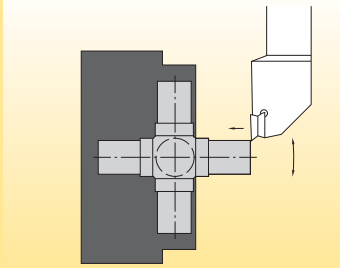
- Lower cutting forces.
- Smooth, open chips.
- Larger feed rates and depths of cut.

(continued)

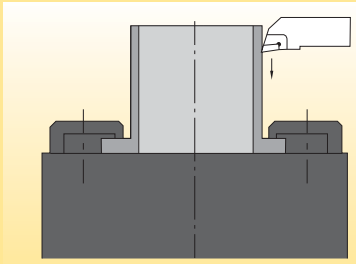
(continued)



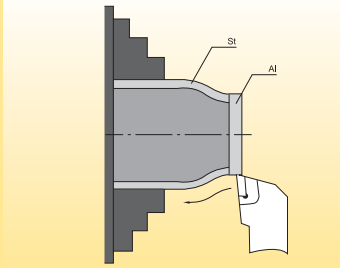
Turning slender shafts (clamping on one side also possible) with a workpiece length outside the chuck >8 x D with high geometric accuracy and surface finish.



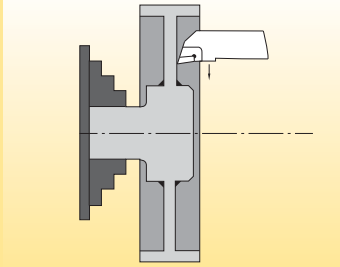
Machining of unstably chucked workpieces (e.g., in a swivel chuck).



External machining of thin-walled workpieces.



Turning material combinations of varying machinability, for example, aluminium combined with stainless and acid-proof steels.



Smoothing of welding seams with interrupted cuts.

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.
For more information, please visit **www.kennametal.com/carbiderecycling.**

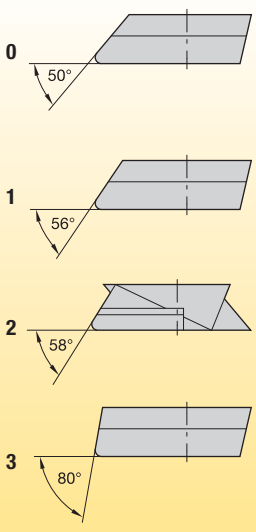
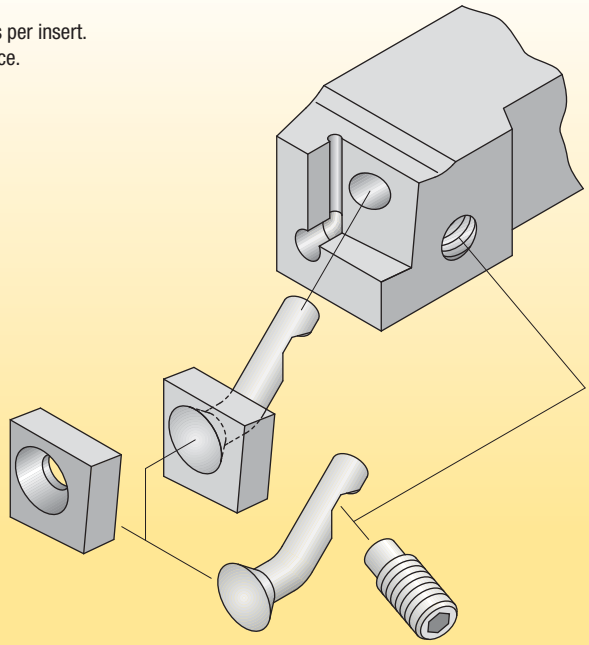
32 = 32 x 25mm
32 x 32mm
40 = 40 x 32mm

	L	cutting edges
0	8mm 20mm 25mm	4 4 4
1	10,5mm 12mm	2 8
3	14,5mm 15mm	2 8
4	17,5mm 18mm	2 8
5	23,5mm 21mm	2 8
7	10,5mm	2 Alu

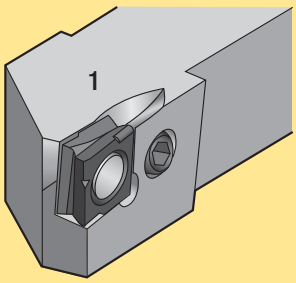


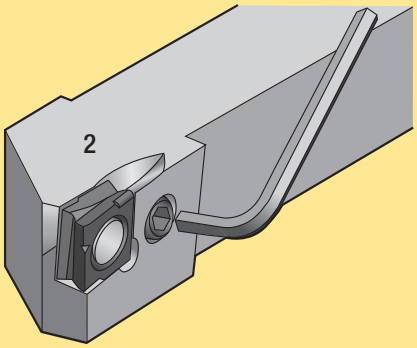
Features of the Fix-Perfect lathe tool system:

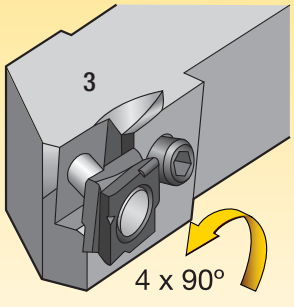
- Cost-effective use of inserts with up to eight positive cutting edges per insert.
- Indexable insert ground on all sides, thus requiring less cutting force.
- High stability due to upright insert for roughing and profiling tasks.
- Guaranteed rigid clamping of inserts.
- Optimum chip evacuation guaranteed.
- Cutting edges protected by insert seat.

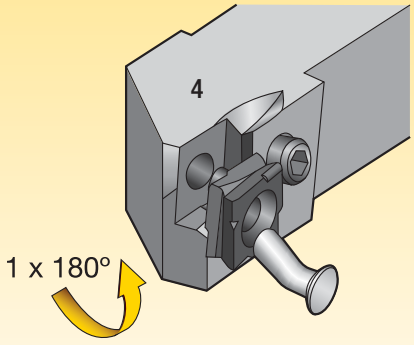


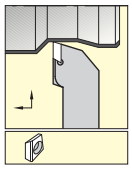
Quick and easy cutting edge switch —
just loosen the pin, no need to remove it.











See page F26 for inserts.

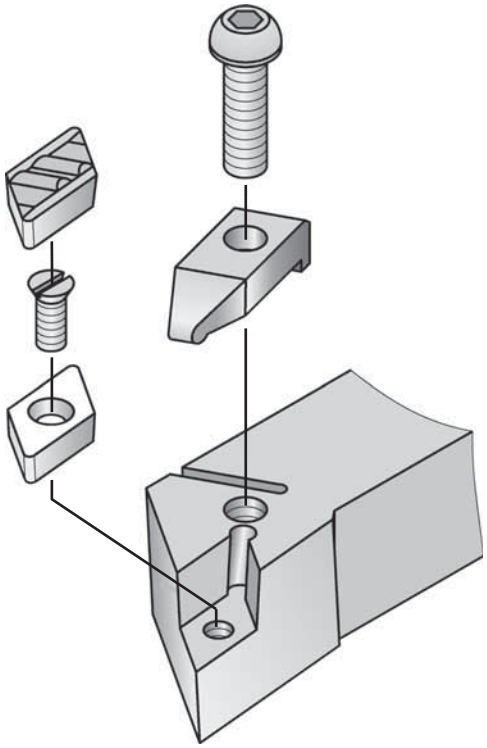
Top Notch™ Profiling

Primary Application

Top Notch is the proven solution for high productivity. The Top Notch system provides consistent tool performance, accurate indexing, and superior clamping to provide excellent surface finishing and superior tool life.

Features and Benefits

- Top Notch guarantees that the insert is rigidly held.
- Stable against alternating cutting force directions, compared with customary clamping methods.
- Second cutting edge well protected against chiphammering.
- Precision-ground inserts guarantee high precision indexing and lower cutting forces.



Select the geometry — based on feed rate and depth of cut

P	Steel
M	Stainless Steel
K	Cast Iron
N	Non-Ferrous Materials
S	High-Temp Alloys
H	Hardened Materials

operation	insert style application	insert geometry	profile	feed rate — mm: 0,04 / 0,063 / 0,01 / 0,16 / 0,25 / 0,4 / 0,63 / 1,0 / 1,6 / 2,5 / 5,0 depth of cut — mm: 0,1 / 0,16 / 0,25 / 0,4 / 0,63 / 1,0 / 1,6 / 2,5 / 4,0 / 6,3 / 10,0
finishing	DCGR			0,1–0,3 0,3–1,8
	KCGR			0,1–0,3 0,3–1,8

Looking for a product that's not shown in this catalogue?
Check the Kennametal website!

Online product catalogue available 24/7

Visit **http://www.kennametal.com/turning/** to browse our electronic catalogue any time you're looking for Kennametal's best tooling solutions. It's fast, free, and always available. The online e-catalogue is updated weekly with products and solutions for milling, turning, holemaking, and tooling systems applications.

KENNAMETAL

K-Lock™ Inserts

Features and Benefits

- K-Lock inserts are ideal for deep grooving and profiling.
- A unique insert clamping system enables unimpeded chip flow.
- Available in moulded and ground peripheries.

Kendex™ Mini Boring Bars

Primary Application

Ground inserts in their neutral position and the precision insert pocket combine to ensure superior surface finishes. The unique system design protects the second cutting edge from damage while the first edge is in operation.

Features and Benefits

- Kendex mini boring bars are specially designed to finish bore diameters as small as 6,35mm.
- Kendex mini inserts contain two precision ground cutting edges.
- Inserts are available in uncoated and PVD coated grades.

Wheel Reprofiling/Wheelset Truing

Primary Application

Kennametal offers a complete line of tooling for wheel and axle maintenance in railroad shops. All tools incorporate the latest in tooling technology for maximum metal removal and higher productivity. All tools are proven performers in actual use over extended periods of time, under a wide range of operating conditions. Standard off-the-shelf inserts and fewer pieces of hardware reduce inventory and operating costs.

Features and Benefits

Versatility

Included in the new expanded line are tools for reconditioning mounted wheel sets, wheel boring, wheel turning, wheel truing, axle turning, and journal burnishing.

Advantages

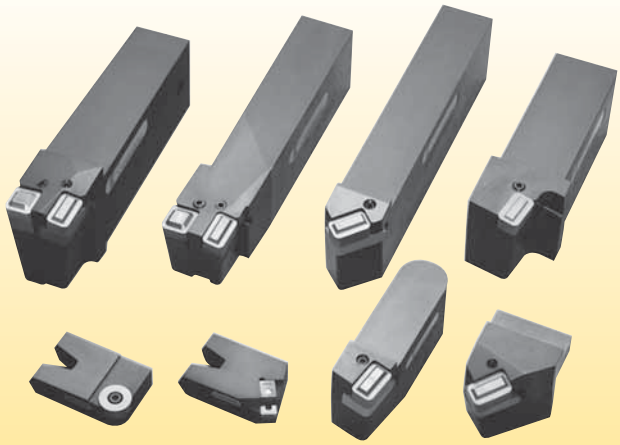
Machining conditions for these tools vary with the type of service the wheel has seen. Among the problems encountered are skid flat areas, overheating of spinning wheels, accidental torch burns, excessive mushroom and rollovers that are hardened by unusual hump retarder pressure and mismatched wheels that cause excessive wear on the side of the flange. Each of these conditions require a different machining speed and depth of cut. Even under these tough conditions, Kennametal tools have produced superior results through reduced production time and lower maintenance costs.

Wheel Lathe Tooling

Kennametal railroad tooling incorporates a unique locking unit design developed through years of testing on all types of wheel lathes and machining wheels with all types of tread surfaces.

This heavy-duty, rugged design has proven to be effective in reducing machining costs on tread turning applications, the most severe machining operation encountered in wheel and axle shops.

Strong inserts, with raised chipbreaker land and honed cutting edges, offer more effective chip control and a stronger cutting edge. Combining this tool geometry with Kennametal's grade selection delivers higher wheel turning productivity.



Wheelset Reconditioning

Advantages of Kennametal Wheel Lathe Tools:

- No top clamp to wear out or interfere with chip flow.
- Insert locks against two walls in the toolholder to prevent insert movement under heavy cutting loads.
- Hardened steel locking unit provides positive insert seating and holder protection.
- Fast, trouble-free insert indexing — just unlock one screw to release the insert.
- Quick removal of the steel locking unit and insert for cleaning or replacement.
- Heavy-duty steel locking unit design ensures longer life and helps reduce operating costs.
- Fewer parts to inventory.
- Toolholders and steel locking units, made from heat-treated alloy steel, provide support to withstand severe roughing cuts on work-hardened wheels.

- Portal-type wheel lathe is a fully automatic, heavy-duty wheel lathe. An integrated measuring device determines wheel set profile wear to establish minimum stock removal.
- The portal-type machine bed enables roll-through operation.
- This tooling is suitable for economical machining of wheel sets for locomotives, transit, passenger, and freight cars.

NOTE: See page F80 for insert selection.

- Tools and inserts are specifically designed for the feeds and speeds normally used on this type of lathe.
- Style HUTC is used for profiling the tread contours on the wheel, and style HUFT is used for normal flange topping.
- For heavy flange topping it may be necessary to use two flange-topping tools, styles HUFT-A and HUFT-B.

NOTE: See page F82 for insert selection.

Kennametal stocks a complete line of standard inserts for wheel and axle machining. Inserts are available in various styles, sizes, and grades.

- **Wheel boring** — moulded chipbreaker inserts in round, square, octagon, and regrindable inserts.
- **Axle turning** — triangle- and diamond-shaped inserts with chipbreakers.
- **Wheel turning** — rectangular and square styles, with or without molded chipbreakers.
- **Wheel truing** — round buttons with center hole for locking.

Kennametal Tools for Railways and Wheel Machining

Primary Application

Kennametal offers a complete line of tooling that incorporates the latest technology for maximum metal removal and higher productivity. All tools perform in actual use over extended periods of time, under a wide range of operating conditions. Standard off-the-shelf inserts and fewer pieces of hardware reduce inventory and operating costs. Tools in this range are for reconditioning mounted wheel sets, wheel boring, wheel truing, axle turning and journal burnishing.

Features and Benefits

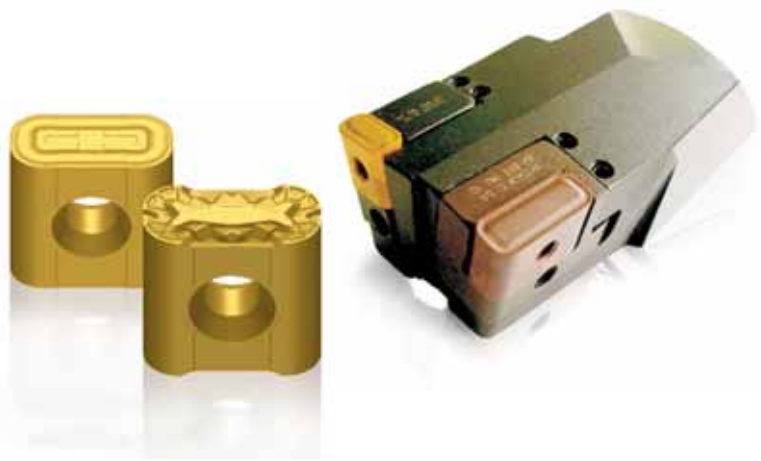
Machining conditions vary with the wheel's type of service. Reduced production time and lower maintenance costs produce superior results even under these tough conditions.

- Skid flat areas.
- Accidental torch burns.
- Overheating of spinning wheels.
- Excessive mushroom and rollovers that are hardened by unusual hump retarder pressure.
- Mismatched wheels that cause excessive wear on the side of the flange.

Each of these conditions requires a different machining speed and depth of cut.

Advantages of Wheelset Reconditioning with Kennametal Wheel Lathe Tools.

- Heavy-duty steel locking unit ensures longer life and reduces operating costs.
- No top clamp to wear out or interfere with chip flow.
- Hardened-steel locking unit locks the insert against two walls in the toolholder to prevent insert movement under heavy cutting loads.
- Quick removal of the steel locking unit.
- Fast trouble free insert indexing.
- Made from heat-treated alloy steel to withstand severe roughing cuts on work-hardened wheels.



L-Type Boring Bars

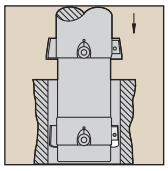
Railroad wheels are wrought steel and cast steel made in a number of designs. Steel wheels are classified as multiple-wear, two-wear, or one-wear wheels.

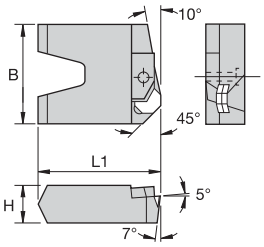
Composition and specifications of wheels include Class A, a relativity low carbon steel wheel; Class L, a lower carbon content than Class A; Class B, an intermediate carbon steel; and Class C, a relativity high-carbon steel wheel.

Kennametal provides L-type bar tooling to bore wheels to match journal sizes from 114,3mm x 203,2mm to 203,2mm x 406,4mm.

- Tools are precision ground and hardened for maximum life.
- Lower profile permits use in L-type bars without modification.
- Fast insert indexing reduces tool changing downtime.
- Enables free cutting action at higher feed rates.
- Delivers good chip control under a wide range of conditions.
- Inserts are available in both coated and uncoated grades.
- Kennametal also provides cartridges to fit Kennametal-supplied bars to run on CNC boring machines.
- Most bars and cartridges are supplied as specials per machine manufacturers' specifications.

- Uses OPG-524 positive rake, octagonal inserts for free cutting action while finish boring.
- Tool positions the insert parallel to the bore in the operation.
- Consistently produces bore finishes to specifications.
- Inserts have eight indexable cutting edges.
- Available in 11 sizes to fit L-type boring bars.





OWF-Style Tools for Roughing

order number	catalogue number	min wheel bore mm	H mm	B mm	L1 mm	journal size	insert 1	shim	shim screw	clamp	clamp screw

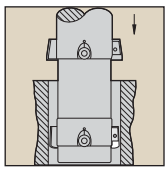
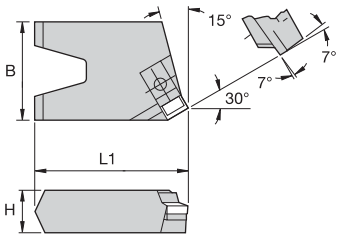
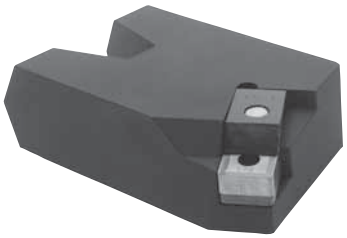
NOTE: Tool sets contain a ground matched pair of toolholders.
See page F93 for insert selection.

- Uses SNMG-style moulded chipbreaker inserts with eight cutting edges.
- Available in 11 sizes to fit L-type boring bars.
- Employs a low-profile design.
- Delivers fast insert indexing while maintaining bore size.
- Tools have a protective insert seat.







SWR-Style Tools for Roughing

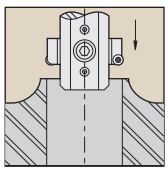
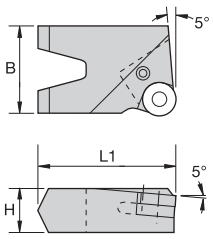
1015589	**SWR874SET**	234,95	25,40	57,15	116,69	8 X 16	SNMG433

NOTE: Tool sets contain a ground matched pair of toolholders.
See page F92 for insert selection.

- Available in the rugged unit locking design for operating at higher feed ranges.
- Unit locking design ensures maximum insert locking by pulling the insert down and back into the pocket.
- Locking unit protects the holder and properly seats the insert.
- Insert can be released quickly for fast indexing, minimising downtime.
- Available in 11 sizes to fit L-type boring bars.





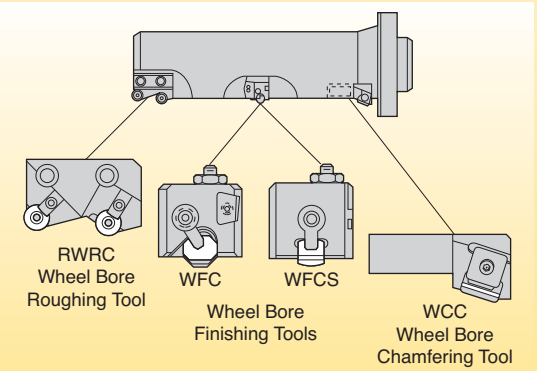
RUWR-Style Tools for Roughing

order number	catalogue number	min wheel bore mm	H mm	B mm	L1 mm	journal size	insert 1
1015656	**RUWR870SET**	222,25	25,40	57,15	107,16	7 X 14	RNMG64

NOTE: Tool sets contain a ground matched pair of toolholders.
See page F92 for insert selection.

Advantages of Kennametal Wheel Boring Tools

- Available in several styles for rough and finish boring.
- Tools are available for finishing KRR- or OPG-style inserts.
- Rough boring tools use RCMH round inserts.
- Tools keep the insert parallel to the bore during operation to ensure a smooth cut within established finish specifications.
- All styles of tools are designed with insert locking confined within the shank height. This enables the tools to be retracted to bore the smaller sizes without modifying the standard bar.
- Check the catalogue number and dimensions of your cartridges before ordering. Bars and cartridges on older machines may not be the same. Call Kennametal's Customer Application Support team for assistance.



- Uses RCMH-style inserts for free cutting action while rough boring.
- This is a double-pocket cartridge and requires two inserts and two sets of hardware.
- Cartridges are easily replaceable.

Axle Turning Tools

Freight car and passenger car axles are usually made of carbon steel and may be heat treated or untreated. Locomotive axles, electric transit axles, and industrial-use axles are made of a variety of carbon and alloy steels. The alloy steel axles are heat treated, while the carbon steel axles are either heat treated or untreated.

Kennametal offers two styles of holders to suit user needs for re-machining journal surfaces on car axles.

- These two standard designs use indexable inserts and have a 3° lead built into the holder to conform to the AAR standards.
- To use these tools in some dual-end-drive axle lathes, a slight modification to the existing tool block is necessary. This is required to clear the head portion of the tool to generate the required radius on the axle.
- Kennametal offers a wide variety of standard off-the-shelf tooling as well as special tooling for all types of machining applications on various machines for reconditioning axles.

- Steel locking unit design ensures maximum insert locking pressure.
- Insert locks firmly in place against the one-wall pocket for fast insert indexing.
- Locking unit protects holders and provides secure seating for the insert.
- Indexable inserts eliminate regrinding.
- Uses 12,7mm IC triangular inserts that provide up to six cutting edges.

Application Specific

New Railroad Wheel Manufacturing Tooling

Features and Benefits

Wheel Production

In wheel production, the forged blanks are mainly machined using RC.. inserts.

For this, Kennametal offers a comprehensive range of high-performance indexable inserts. Proprietary coatings combined with application-specific chipbreakers make these inserts well suited for new wheel production.

Together with the KM™ Quick Change tooling system, high stability, repeatability, and process security are ensured.

Clamping System

Our Fix-Perfect™ clamping system will provide optimum security during the most arduous machining process. With just a few revolutions of the clamping screw, the complete insert set (insert, shim, and clamping stud) can be changed.

Application Specific

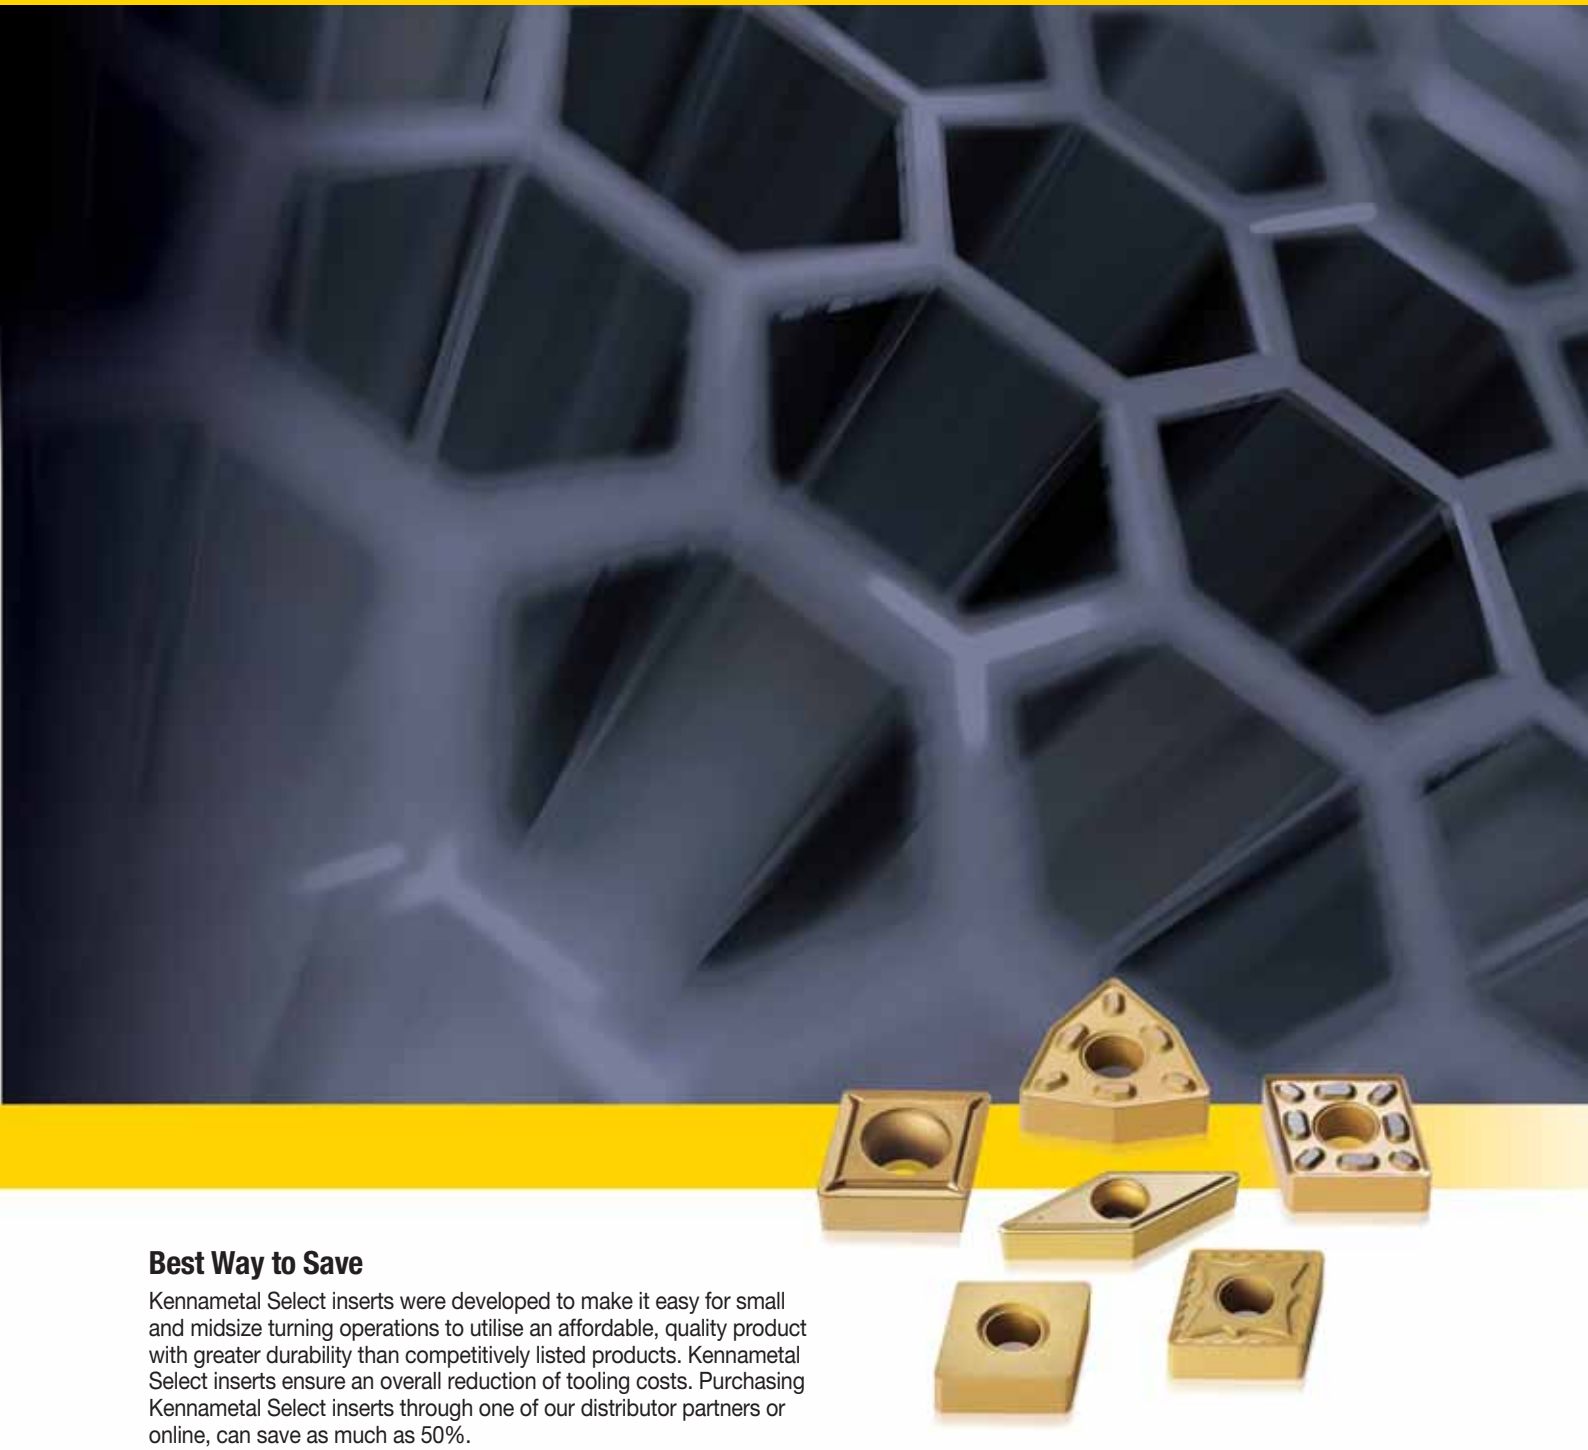
Kennametal Select • The Inserts You Want at a Price You'll Love

Introducing Kennametal Select inserts — the cost-effective line from the brand you already know and trust for quality. Each insert is engineered and manufactured by Kennametal to outperform competitive inserts when cutting steel, stainless steel, cast iron, and high-temperature alloys. These inserts can be used in an incredible 80% of all applications. This versatility, along with the simple grade selection method and great price, make Kennametal Select inserts perfect for small and midsize turning operations.

Features and Benefits

Getting the Most from Every Insert

Kennametal Select products make it simple to get the most out of your inserts, and your money. Every insert is gold, which exposes wear as the tool continues to be used — making it easy to detect when an insert is ready to be changed — maximising the product's value and protecting the workpiece. Also, because Kennametal Select inserts can be used in most applications, a single insert can take on any number of tasks, thus reducing your inventory. Kennametal Select products are also reliable enough to cut steel, stainless steel, cast iron, and high-temperature alloys, enabling quick changes in workpiece materials without the need to swap inserts, saving time and money.

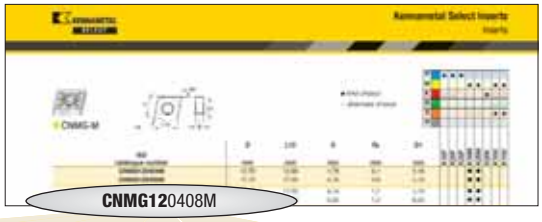


Best Way to Save

Kennametal Select inserts were developed to make it easy for small and midsize turning operations to utilise an affordable, quality product with greater durability than competitively listed products. Kennametal Select inserts ensure an overall reduction of tooling costs. Purchasing Kennametal Select inserts through one of our distributor partners or online, can save as much as 50%.

How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.



Application Specific

C — Insert Shape

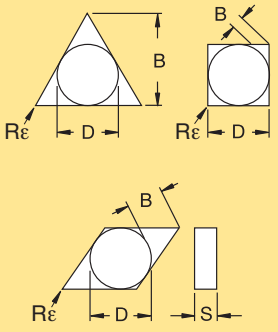
H	Hexagon 120°	
O	Octagon 135°	
P	Pentagon 108°	
R	Round —	
S	Square 90°	
T	Triangular 60°	
C D E M V	Rhomboid 80° 55° 75° 86° 35°	
W	Trigon 80° with enlarged corner angles	
L	Rectangular 90°	
A B N/K	Parallelogram 85° 82° 55°	

N — Insert Clearance Angle

A	3°	
B	5°	
C	7°	
D	15°	
E	20°	
F	25°	
G	30°	
N	0°	
P	11°	
O	Indicated for other clearance angles requiring descriptions.	

M — Tolerance Class

Tolerances apply prior to edge prep and coating



D = Theoretical diameter of the insert inscribed circle
S = Thickness
B = See figures below

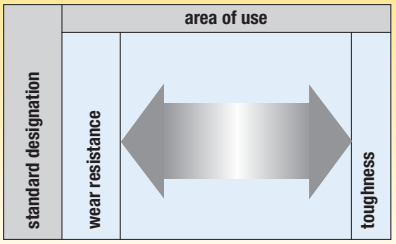
- Engineered to optimise performance.
- Gold coating on every insert.
- Proven grade technologies.



Grade

Coating		Grade Description	05	10	15	20	25	30	35	40	45
K10P	C3, C7	Coated carbide. MTCVD — TiN-TiCN-Al_2O_3-TiN. Ideal for light finishing to medium machining applications. Superior wear resistance.	P	P	P	P					
K25P	C2, C3, C6-C7	Coated carbide. MTCVD — TiN-TiCN-Al_2O_3-TiN. Great general-purpose turning grade for steels. Ideal for semi-finishing to moderately heavy roughing.		P	P	P	P	P			
K35P	C5-C6	Coated carbide. MTCVD — TiN-TiCN-Al_2O_3-TiN. Tough carbide grade. Ideal for roughing and heavy roughing applications						P	P	P	P
K10M	M10-M20	Coated carbide. MTCVD — TiN-TiCN-Al_2O_3-TiN. Ideal for finishing to medium machining of austenitic stainless steels.			P	P	P				
K25M	C1-C2	Coated carbide. MTCVD — TiN-TiCN-Al_2O_3-TiN. Ideal for general-purpose machining of stainless steels.						P	P	P	
K20K	C3-C4	Coated carbide. MTCVD — TiN-TiCN-Al_2O_3-TiN. Great when used for straight or lightly interrupted cut applications of ductile and cast irons.	P	P	P						
K10U	C3-C4	Coated carbide. PVD-TiAlN-TiN. Ideal for finishing of difficult-to-machine alloys and stainless steels.		P	P	P					
K15U	C3	Uncoated carbide. Excellent abrasion resistance for machining cast irons, austenitic stainless steels, and most high-temperature alloys.		P	P	P

Application Specific

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.
For more information, please visit **www.kennametal.com/carbiderecycling.**

Select the Correct Holemaking Solution for Your Application

Added Value for Your Performance

Increase of Productivity and Efficiency

- Material and application-specific solutions.
- Maximum metal removal rates and repeatability.
- Standardised design platforms for special tools based on “proven solutions” for individual optimisations and combination tools.

Control of Total Tooling Costs

- High tool utilisation through material and application specific solutions.
- Process-safe regrinding service.
- Reduction of stocks through efficient modular concepts.
- Multiple platforms per application to achieve the most cost-efficient solution.

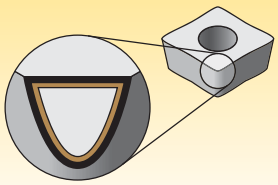
Coating	Grade Description	05	10	15	20	25	30	35	40	45
KF1	• Uncoated finest grain carbide. • Highly wear-resistant grade. • First choice for precision drilling of non-ferrous materials. • High cutting performance with excellent surface quality due to the excellent geometry of the TX drill.	K, N	K, N							
KN15	• Uncoated carbide. • Highly wear-resistant grade. • Excellent surface quality for superior chip evacuation. • First choice for flat-bottom drilling of non-ferrous materials.	N, S	N, S	N, S	N, S	N, S				
KN25	• Uncoated finest grain carbide. • Highly wear-resistant grade. • Excellent surface quality for superior chip flow. • Used in deep-hole drilling applications in non-ferrous materials.	N	N	N	N	N	N			
K10	• Uncoated carbide grade with high degree of temperature resistance. • Suitable for cast iron material, non-ferrous materials, and titanium alloys. • High cutting performance, safe drilling process. • Dry machining also with cooling lubricants.	K, N, S	K, N, S	K, N, S						
K605	• Uncoated finest grain carbide. • First choice for reaming under normal conditions. • High-precision carbide grade for free-machining non-ferrous alloys.	K, N	K							
K715	• Uncoated carbide grade. • Enables very sharp cutting edges. • Primarily used for super-alloys and titanium. • Ideal for aerospace materials, including non-ferrous materials.	N, S		N, S	N, S	N, S				



Coatings provide high-speed capability and are engineered for finishing to heavy roughing.

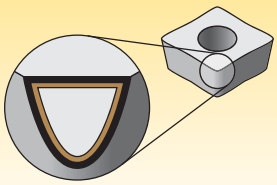
wear resistance ⟷ toughness

Grade

Grade		05	10	15	20	25	30	35	40	45
KCPK15	• Multilayer TiAlN-PVD-coated universal fine-grain grade. • Highest level of wear resistance for higher cutting speeds. • Excellent surface quality for superior chip evacuation even when MQL is applied. • More efficient than TiN-PVD grades. • First choice for alloyed and high-alloy steel as well as cast iron.	P, K								
KCM15	• Nanolayer TiAlN-TiN-PVD coated fine-grain carbide. • High wear resistance and low adhesion to stainless steel materials. • Excellent surface quality for superior chip evacuation even when low-pressure coolant is applied.	M, S								
KCK10	• Multilayer AlCr-PVD-coated fine-grain carbide. • Newly developed unique coating. • Excellent surface quality for superior chip evacuation even when MQL is applied. • Extraordinary wear resistance in drilling of cast iron materials. • High-temperature hardness allows for elevated speeds.	K								
KCP15	• Nanolayer AlTiN-PVD-coated over fine-grain carbide. • Nanostructured coating with improved bonding process for longer tool life. • Increased Al content for better thermal and chemical stability (oxidation resistance) and higher toughness and hardness.	P, K								
KCPK10	Composition: Advanced TiCN-Al_2O_3-CVD coating combined with a cobalt-enriched carbide substrate, this grade offers a balanced combination of deformation resistance and edge toughness. Application: KCPK10 offers outstanding abrasion and crater wear resistance for high-speed machining of steels and cast irons. Use for very high cutting speeds with low to medium feed rates.	P, K								
KCU25	Composition: Advanced TiCN-Al_2O_3-CVD coating, together with a newly engineered tough carbide substrate, provides adequate deformation resistance along with excellent edge strength and offers very good wear resistance over a wide range of machining conditions. Application: KCU25 is a high productivity grade with high speeds and feeds, and the first choice for productive process with very good reliability in steels, stainless steels, and cast irons.	P, M, K								



Coatings provide high-speed capability and are engineered for finishing to heavy roughing.

P	Steel
M	Stainless Steel

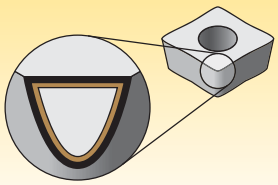
S	High-Temp Alloys
H	Hardened Materials

wear resistance ⟷ toughness

Grade

Coating	Grade Description	05 10 15 20 25 30 35 40 45
KCU40 	Composition: Multilayered TiN-TiAlN-PVD coating and a tough substrate, that withstands interruptions and provides high wear resistance for long tool life. Application: KCU40 is the first choice for high reliability in most materials. This grade should be used at medium speeds and high feeds due to sharper edges. KCU40 covers steel, stainless steel, cast iron, and high-temperature alloys for high toughness applications under certain conditions.	P M K
KC5410 	• TiB_2-PVD coating over a very deformation-resistant unalloyed substrate. • Designed for roughing, semifinishing, and finishing of free machining (hypoeutectic <12,2% Si) aluminium, aluminium alloys, and magnesium alloys. • High hardness and extremely smooth surface, resulting in reduced surface friction, speedy chip flow, and outstanding wear resistance. • Prevents built-up edge because of a very low affinity for aluminium.	N
KC6005 	• TiN-PVD-coated carbide. • Highly wear-resistant substrate. • Reaming grade with universal applications in high-precision carbide cutting.	P M K S
KC6105 	• TiCN-PVD-coated carbide. • Reaming grade with highly wear-resistant substrate for steel and stainless steel. • Particularly high level of wear resistance for stainless steel with high-precision carbide cutting values.	P M
KC6305 	• TiAlN-PVD-coated carbide. • Reaming grade with highly wear-resistant substrate. • Particularly suitable for cast iron and steel. • For exceptionally high-precision finishing. • High-precision carbide cutting values.	P K
KC7135 	• TiCN-TiN-PVD-coated carbide. • Highly wear-resistant grade. • For universal application in steel, stainless steel, and irons. • Specifically used for KSEM PCM precentring inserts.	P M K



Coatings provide high-speed capability and are engineered for finishing to heavy roughing.

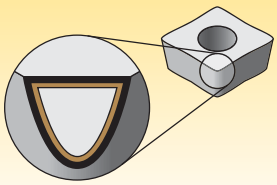
Grade

Coating	Grade Description	05 10 15 20 25 30 35 40 45
KC7140	• TiCN-TiN-PVD-coated alloyed carbide. • Tough substrate containing 11% cobalt. • Ideal for general machining of alloy steel, low- and medium-carbon steel, tool steels, and 400 series stainless steels.	P K
KC720	• TiN-PVD-coated carbide. • Particularly high-impact strength grade. • For all steels, stainless steels, super-alloys, and titanium. • First choice for difficult conditions such as interrupted cutting, unstable clamping, etc.	P M S
KC7210	• TiAlN-PVD-coated carbide. • Excellent heat resistance with a good level of toughness. • First choice for high-speed cutting of cast iron materials when dry machining with TF drill and under cooling lubricants with indexable inserts.	K
KC7215	• TiAlN-PVD-coated universal fine-grain grade. • Highest level of wear resistance resulting in higher cutting speeds. • More wear resistant than TiN-PVD grades. • Particularly suitable for alloyed steel and cast iron.	P K
KC7225	• TiAlN-PVD-coated fine-grain carbide. • High level of wear resistance and tough structure. • Highest level of process safety for stainless steel, cast iron materials, non-ferrous materials, super-alloys and titanium.	M K N S
KC7235	• TiAlN-PVD-coated fine-grain carbide. • Tough substrate. • Highly wear-resistant coating. • Suitable for machining steel, even in difficult conditions.	P



Coatings provide high-speed capability and are engineered for finishing to heavy roughing.

Tolerances of Drills and Holes

Solid carbide drills with tolerance of m7 (SE Drill, TF Drill, KU Drill) create holes with tolerances of H9. H8 can be achieved in very good conditions. The TX Drill should be used for holes in H8, in favourable conditions H7 can be achieved.

Solid carbide drills (BF Drill) with h7 create holes in **JS9–JS11**.
Other drilling tolerances require special solid carbide drill versions.

GOdrill™ • Kennametal's First Microdrill

The high-performance solid carbide drill tailored for very small- to medium-diameter drilling applications.

Primary Application

The all new GOdrill addresses drilling operations in a diameter range of 1–12,7mm (.0394–.5") in a broad variety of materials and applications such as fuel systems or medical components. Due to its very unique design, the GOdrill expands the advantages of modular drills into the small diameter range: high-end grades, wear-indicator coating, and new, proprietary geometries enable full utilization of the drill's tool life capacity. The GOdrill qualifies as a very cost-effective, throwaway-type tool in the given diameter range.

Features and Benefits

GOdrill Design

- Marginless design for reduced friction and heat — thus longer tool life.
- Very versatile tool works in a wide range of materials.
- Cost effective, no regrind logistics.
- No setup.
- Throw away or recycle.
- Through-coolant option down to diameter 1,5mm (.0591").

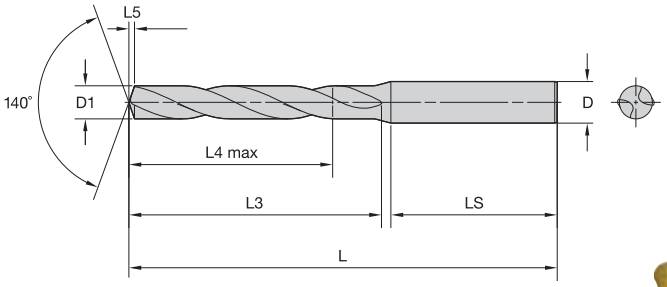
CPG Point

- Optimised gashing design for microdrilling ensures free flow of chips in the centre of the drill.
- Excellent centering capabilities.
- Reduced axial forces.
- Good hole quality, roundness, and cylindricity for all materials.

KC7325™ Grade

The grade contains a double coating:

- The multilayer, TiAlN-based coating with high hot hardness enables the drill to run at high cutting speeds as well as in MQL applications.
- A TiN top layer serves as wear indicator for easier monitoring on small drills, which can be difficult to see.
- Improved visibility of wear helps to utilise the tool's full tool life capacity.



For information on L, L3, and L4 max, see the Solid Carbide foldout table.

TF Drills for High Metal Removal Rates

Primary Application

B105 Solid Carbide Drills are ideal for high metal removal rates and excellent hole quality in short chipping materials such as grey cast iron, ductile iron, and aluminium as well as in short-hole titanium applications.

Features and Benefits

Three Cutting Edges

- Higher feed rates than with two-edged drills.

Three Spacious Flutes

- Rapid chip evacuation.
- Three-margin lands deliver better hole quality and straightness than two-flute drills.

Wear-Resistant Carbide Grade

- High tool life in abrasive materials such as cast iron and aluminium die cast alloys.

TiAlN-Coated KC7210™ Grade

- Higher wear resistance at elevated speeds.

Uncoated K10™ Grade

- The uncoated grade helps to prevent built-up edge in drilling aluminium and high-temp alloys.

Customisation

- Intermediate diameters available as engineered solutions.
- Length variations and step drills available as engineered solutions.

TF Drills with Through Coolant for Titanium Materials

Primary Application

B125 Solid Carbide Drills are specifically designed for titanium and titanium alloy workpiece materials.

Features and Benefits

Three Cutting Edges

- Higher feed rates than two-edged drills.

Three-Flute Design

- Three-margin lands deliver better hole quality and straightness than two-flute drills.

Through-Coolant Design

- Improved chip evacuation enables deeper holes.
- More effective cooling of the cutting edges and longer tool life.
- Lubrication of the margin lands and better hole surface quality.

Fine-Grained Carbide Grade

- Optimum combination of toughness and wear resistance for titanium drilling applications.

Customisation

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.

HP Beyond™ Drills with Through Coolant for Stainless Steel

Primary Application

B210_HP Series Solid Carbide Drills are designed specifically for stainless steel applications, offering high performance and long tool life in regular steel and titanium materials. By combining unique Kennametal technologies, such as the HP-point, flute geometry, and a new post-coat treatment technology into one tool, the B2_HP Beyond is the ultimate high-volume production tool.

Features and Benefits

HP Drill-Point Design

- Low thrust prevents workpiece flexing.
- Excellent centring capabilities.

Unique Flute Design

- Improved chip evacuation.
- Capability to drill deeper holes in difficult-to-machine materials.

KCM15™ Beyond Grade

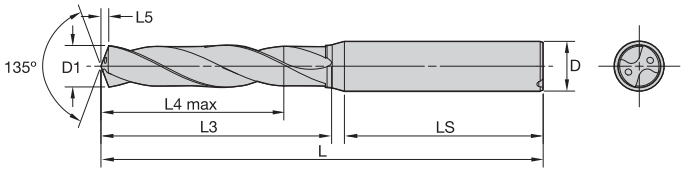
- A nanolayer, TiAlN-based coating with high wear resistance and low adhesion to stainless steel materials.
- The highly polished surface ensures superior chip evacuation even when low-pressure coolant is applied.
- The average metal removal rate and tool life dramatically improve (minimum 10–30%).

Customisation

- Intermediate diameters available as engineered solutions.
- Length variations and step drills available as engineered solutions.
- High step diameter ratios and very complex step drill geometries are not recommended for austenitic stainless steel.
- Using Kennametal Slim Line Hydraulic Chucks together with standard B21_HP is recommended if workpiece contours need to be bypassed.

F-Shank

- For standard line items with F-shank, please refer to the e-catalogue on www.kennametal.com.



For information on L, L3, and L4 max, see the Solid Carbide foldout table.

HP Beyond™ Drills for Steel

Primary Application

B221_HP Series Solid Carbide Drills offer the highest metal removal rates and longest tool life in steel and iron materials when dry cutting or using external flood coolant. Dry drilling up to 5 x D possible.

B224_HP Series Solid Carbide Drills are ideal for super high-speed drilling of unalloyed and alloyed steel. Achieve 100% higher cutting speed without compromising tool life. Operate these drills with standard through coolant or MQL.

By combining unique Kennametal technologies, such as the HP-point, flute geometry, and a new Beyond grade technology into one tool, the B2_HP Beyond is the ultimate high-volume production tool.

Features and Benefits

HP Drill-Point Design

- Low thrust prevents workpiece flexing.
- Excellent centring capabilities.

Unique Flute Design

- Improved chip evacuation in dry and mid L/D drilling operations.
- Better hole surface quality.

KCPK15™ Beyond Grade

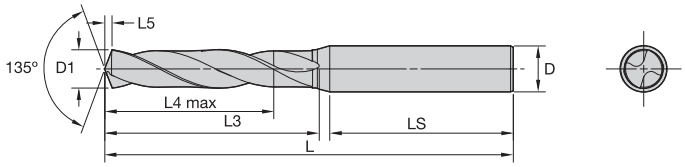
- The grade is a multilayer, TiAlN-based coating with high hot hardness. High cutting speeds enable use in MQL applications.
- The highly polished surface ensures superior chip evacuation even when low-pressure coolant is applied.
- The average metal removal rate and tool life performance improved dramatically (10–30%).

Customisation

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.
- For holes deeper than 5 x D, internal coolant is recommended.
- Using Kennametal Slim Line Hydraulic Chucks together with standard B22_HP is recommended if workpiece contours need to be bypassed.

F-Shank

- For standard line items with F-shank, please refer to the e-catalogue on www.kennametal.com.



For information on L, L3, and L4 max, see the Solid Carbide foldout table.

Carbide Recycling

Help preserve and protect our planet!

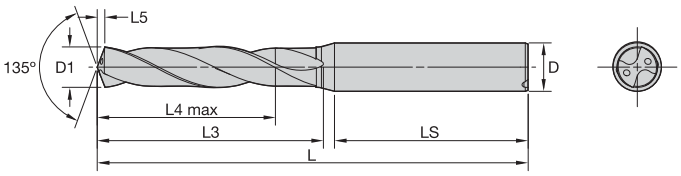
It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.
For more information, please visit **www.kennametal.com/carbiderecycling.**



For information on L, L3, and L4 max, see the Solid Carbide foldout table.

YPC Beyond™ Drills with Through Coolant for Iron Materials

Primary Application

The all new B25_YPC Series Solid Carbide Drills are specifically engineered to deliver best-in-class hole quality and longest tool life in cast iron, ductile iron, CGI, and ADI. Operate these drills with standard through coolant or MQL.

The B25_YPC Beyond Solid Carbide Drill combines unique Kennametal technologies, such as the Y-TECH™ flute spacing, the HP-point geometry, the KCK10™ Beyond grade, and the latest, proprietary post-coat treatment technology into one tool.

Features and Benefits

Y-TECH Technology with Uneven Flute-to-Flute Angle

- Unbalanced forces by design avoid chipping on margin lands.

Three-Margin Lands

- Reduce pendulum motion by directing forces towards third margin for superior hole accuracy (cylindricity, constant diameter, hole straightness).

New HP Drill-Point Design

- Low thrust prevents workpiece flexing.
- Excellent centring capabilities.
- Highest possible feed rates.

Corner Chamfer

- Avoids breakout when drilling through holes in grey iron.
- Significantly increases tool life at elevated speeds and feeds.

KCK10 Beyond Grade

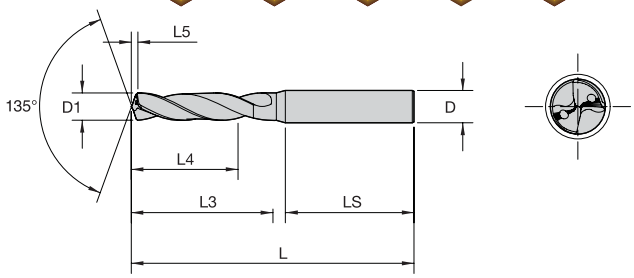
- The grade contains multiple layers of PVD coating offering outstanding wear resistance for the drilling of cast irons.
- The highly polished surface ensures superior chip evacuation even when low-pressure coolant or MQL is applied.

Customisation

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.
- Using Kennametal Slim Line hydraulic chucks together with standard B25_YPC is recommended if workpiece contours need to be bypassed.

F-Shank

- For standard line items with F-shank, please refer to the e-catalogue on www.kennametal.com.



NEW!

beyond

For information on L, L3, and L4 max, see the Solid Carbide foldout table.

SE 4-Margin Drills with Through Coolant for Steel

Primary Application

B256 Series Solid Carbide Drills are the high-performance platform for mid-L/D applications in steel that require high accuracy and consistent hole straightness combined with excellent metal removal rates and long tool life.

Features and Benefits

SE Drill-Point Design

- Sculptured edge enables high feed rates.

Four-Margin Lands

- Improves hole straightness.
- Improves hole alignment when drilling through cross holes.

KC7315™ Grade

- Multilayer, TiAlN-based coating with high hot hardness allows 30% higher cutting speeds and constant tool life.
- Optimised tool surface finish ensures chip evacuation when drilling deeper holes.

Customisation

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.
- For follow-up operations, such as machining screw holes in connecting rods, the point angle of the step drill for the screw head should be adjusted.

HP Beyond™ 4-Margin Long-Length Drills with Through Coolant

beyond™

Primary Application

B269_HP Series Solid Carbide Drills are 12 x D, long-length drills, closing the gap between 8 x D drill (B256_SE) and 15 x D (B271_HP). They are designed for deep-hole applications without pilot drill in steel, cast iron, and stainless steel materials. Operate these drills with standard through coolant or MQL. The drills have a standard A-shank according to DIN 6535 HA (round cylindrical with 2mm steps).

Features and Benefits

Four-Margin Lands

- Improves hole straightness.
- Improves hole alignment when drilling through cross holes or inclined exits.

HP Drill-Point Design

- Low thrust prevents workpiece flexing.
- Excellent centring capabilities.
- Eliminates the need for pilot drilling.

Unique Flute Design

- Drastically improved chip evacuation.
- Better hole surface quality.

KCPK15™ Beyond Grade

- The grade is a multilayer, TiAlN-based coating with high hot hardness. It enables highest cutting speeds and enables the use in MQL applications.
- The highly polished surface ensures superior chip evacuation even when low-pressure coolant is applied.

Customisation

- Intermediate diameters available as engineered solutions.
- Length variations and step drills available as engineered solutions.

HP Solid Carbide Deep-Hole Drills for Steel, Cast Iron, and Non-Ferrous Materials

Primary Application

B27_HPG Series Solid Carbide Drills are the optimum platform for drilling holes up to 30 x D in steel, cast iron, and stainless steel materials. Drill deep holes up to 4x faster than conventional HSS and gun drills. Application of MQL is possible.

The B27_HPS in the new uncoated KN25™ grade now offers the same advantages for drilling in non-ferrous materials such as aluminium, copper, and brass. These series are now available from 2,3–16mm (.09–.63") diameter and in lengths from 15–30 x D.

Features and Benefits

HP Drill-Point Design

- Low thrust.
- Excellent centring capabilities.
- Highest possible feed rates.

Four-Margin Lands

- Improves hole straightness.
- Improves hole alignment when drilling through cross holes.

Unique Flute Design

- Drastically improved chip evacuation.
- Better hole surface quality.

KC7425™ Grade (B27_HPG)

- A multilayer, AlCrN-TiSiN PVD coating provides outstanding wear resistance.
- New ultra-fine-grain carbide ensures process reliability at high feed rates.

KN25 Grade (B27_HPS)

- The uncoated grade helps to prevent built-up edge when drilling aluminium and high-temp alloys.
- The highly polished surfaces of both grades ensure superior chip evacuation, even when low-pressure coolant or MQL is applied.

Customisation

- Intermediate diameters available as semi-standards.
- Length variations — including even longer versions — available as engineered solutions.

The B27_ deep-hole drill series offers an increase of up to 100% in metal removal rates (MRR) compared to competitive gun and HSS drills. It also enables up to 20–30% increased MRR compared to competitive solid carbide products. This MRR increase means bottom-line savings to customers in throughput, machine time, and personnel hours.

Increased Drill Head
Reduces contact with hole wall.

135° HP Point Geometry
Excellent centring ability.

Four-Margin Design
Stability increases tool life.

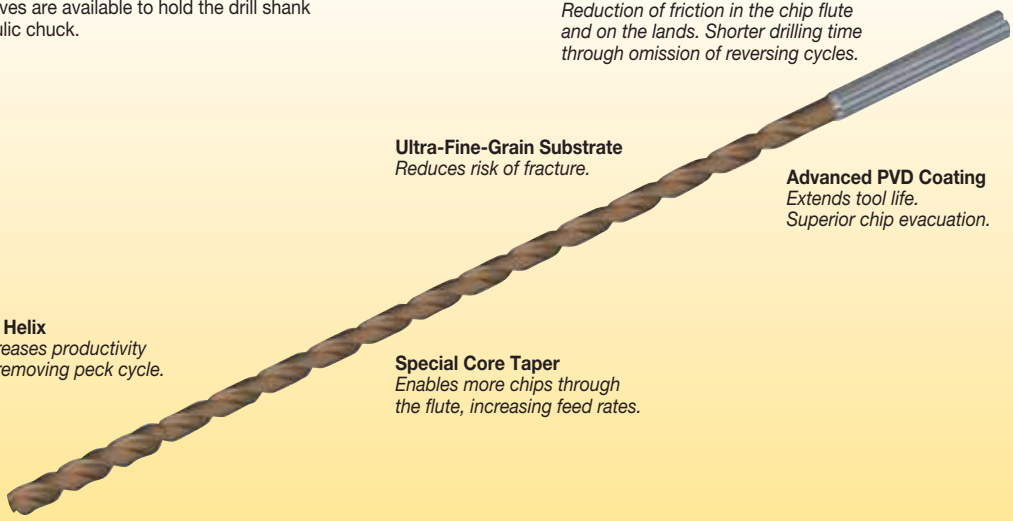
To achieve the best tool performance, we recommend using the deep-hole drill with a hydraulic chuck.

Reduction sleeves are available to hold the drill shank with the hydraulic chuck.

Unique New Polished Surface
Reduction of friction in the chip flute and on the lands. Shorter drilling time through omission of reversing cycles.

Ultra-Fine-Grain Substrate
Reduces risk of fracture.

Advanced PVD Coating
Extends tool life.
Superior chip evacuation.



30° Helix
Increases productivity by removing peck cycle.

Special Core Taper
Enables more chips through the flute, increasing feed rates.

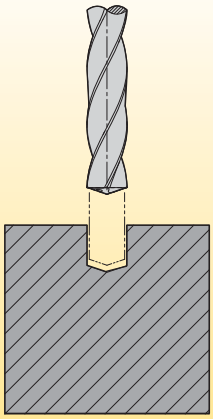
1) Pilot/Pre-Drill Hole

- Drill: B976A… KC7315™ or another drill with a 140° point angle.
- Depth of pilot: minimum 2 x D.
- Drill Ø = nominal Ø up to nominal +0,010mm (+.0004").
- Apply catalogue recommended speeds and feeds.

Recommendations:

- Use only a conical (B976A) or split-point drill to pilot (do not use an SE-HP drill).
- Use a hydraulic chuck to achieve minimum tool runout.
- Be sure the machine tool and setup are rigid.
- Check the pilot drill for wear. Excessive wear can lead to premature wear on the B27_ cutting edge and possibly catastrophic failure.



2) Feed B27_ into Pilot Hole:

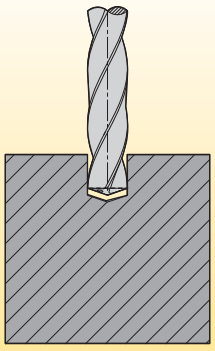
- Drill: B27_
- 1.000 RPM and recommended feed rate, no rapid traverse.
- Depth: 0,25–0,30mm (.010–.012") above the bottom of pilot hole.

Recommendations:

The coolant channels of the B27_ are smaller than typical Kennametal drills. Be sure that a steady supply of coolant is delivered through the coolant channels to the cutting edges. If coolant supply is not steady or is unequal through both channels, check:

1. Coolant filtering system.
2. Sealing of adaptor/spindle.
3. Chips blocking the coolant hole on the drill shank.

NOTE: Reduce cutting speed to minimise imbalances in machine spindle/adaptor. On MQL applications, make sure that the coolant is directly supplied from the chuck into the back end of the drill shank.



3) Drill Hole:

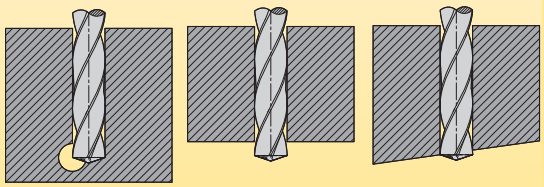
Cutting Parameters: start recommended speed and feed rate at 0,25–0,30mm (.010–.012") from the bottom of the pilot hole.

Recommendations:

DO NOT PECK OR DWELL up to 30 x D!

With long-chipping steel materials, it may be necessary to increase feed rate by 10–20% to provide optimal chip control. For long-chipping aluminium materials, it may be necessary to decrease feed rate and increase speed.

Reduce feed rate on angled exits and cross holes by 50–60%.



NOTE: Feed recommendations are usually higher than with conventional solid carbide drills.

4) Drill Retraction:

Cutting Parameters: 50 RPM and feed rate 2 m/min (40mm/rev or 1.6 IPR).

NOTE: Reduce cutting speed to minimise imbalances in machine spindle/adaptor.

HP Drills with Through Coolant for High-Temperature Alloys

Primary Application

B28_ Series Solid Carbide Drills offer a material-specific design and grade for machining high-temperature-resistant alloys such as titanium alloys and nickel-based alloys in aerospace applications. This drill minimises subsurface deformation.

Features and Benefits

HP Drill-Point Design

- Low thrust prevents workpiece flexing.
- Excellent centring capabilities.

Straight Cutting Edge

- Optimised chip formation with less stress and heat generation.
- Rigid wedge at the cutting corner to withstand high thermal and mechanical stress.

Unique Flute Design

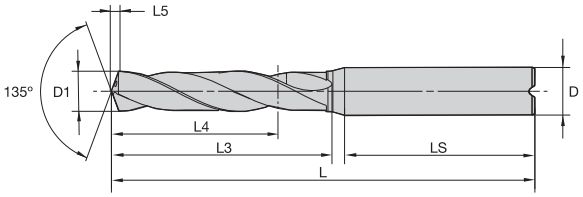
- Drastically improved chip evacuation.

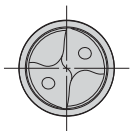
K715™ Grade

- Specified, uncoated 9% cobalt fine-grain carbide.
- The uncoated grade helps to prevent built-up edge in drilling aluminium and high-temp alloys.

Customisation

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.





For information on L, L3, and L4 max, see the Solid Carbide foldout table.

KENNAMETAL

Y-TECH™ Drills with Through Coolant for Difficult-to-Machine Materials

Primary Application

The B29_YPL Series Solid Carbide Drills are specifically engineered to drill stainless steel, high-temp alloys, and difficult-to-machine materials.

Y-TECH drills deliver best-in-class hole quality and longest tool life in these difficult-to-machine workpiece materials. Operate these drills with standard through coolant or MQL.

Features and Benefits

YPL Drill-Point Design

- Ensures good centring and chip formation.
- No jamming of chips and enables easy reconditioning.

Uneven Flute-to-Flute Angle

- Unbalanced forces by design eliminate chipping on margin lands.

Three-Margin Lands

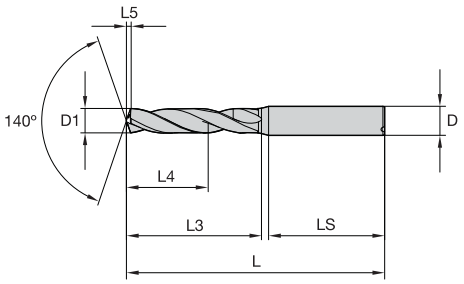
- Reduce pendulum motion by directing forces towards third margin, which results in superior hole accuracy (cylindricity, constant diameter, hole straightness).

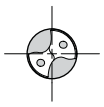
KC7315™ Grade

- A multilayer, TiAlN-based coating with high hot hardness enables higher cutting speeds and outstanding wear resistance.
- Optimised surface finish of the tool ensures chip evacuation in high-speed drilling and MQL applications.

Customisation

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.
- Using Kennametal Slim Line Hydraulic Chucks together with standard B29_YPL is recommended if workpiece contours need to be bypassed.





For information on L, L3, and L4 max, see the Solid Carbide foldout table.

Visit **http://www.kennametal.com/holemaking/** to browse our electronic catalogue any time you're looking for Kennametal's best tooling solutions. It's fast, free, and always available. The online e-catalogue is updated weekly with products and solutions for milling, turning, drilling, and tooling systems applications.

TX Drills with Through Coolant for Close Tolerance Holes

Primary Application

B411 Solid Carbide Drills have an X-shaped, free-cutting 130° point design and are designed for grey cast iron, nodular iron, and non-ferrous and aluminium alloy materials. Best suited for high-quality, close tolerance holes that require a very good surface finish.

Features and Benefits

Two Cutting Edges with Straight Flutes

- Precise shape of the hole even if used as platform for complex step drills.
- Can run into cored holes.

X-Shaped Drill Point

- Excellent centring capabilities.

Four-Margin Land Design

- Second set of cutting margin lands improves the surface quality.
- Achieve tight diameter tolerances.
- Can run through cross holes and exit on inclined surfaces.

Wear-Resistant Carbide KF1™ Grade

- Long tool life in abrasive materials, such as cast iron and aluminium die cast alloys.
- The uncoated grade KF1 helps to prevent built-up edge in drilling aluminium.

Customisation

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.
- Coated KC7205™ grade delivers high wear resistance with very high diameter accuracy.

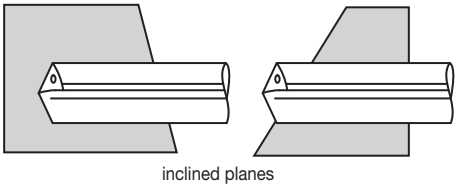
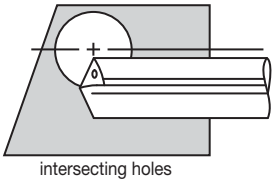
TX Drill Applications

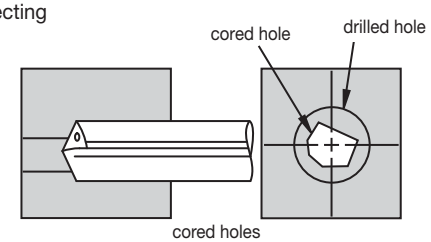
The excellent stability of the TX drill enables it to be used for drilling through inclined planes, intersecting holes, and cored holes:



inclined planes



intersecting holes



cored holes

SPF Drills for Composite (CFRP) Materials

Primary Application

B53_ Series Solid Carbide Drills offer a material-specific design and grade to machine carbon fibre-reinforced polymer (CFRP) composite materials by minimising delamination and increasing tool life.

Features and Benefits

SPF Drill-Point Design

- Special 90° point angle increases centring capability.
- Low thrust and improved hole quality.

Unique Geometry

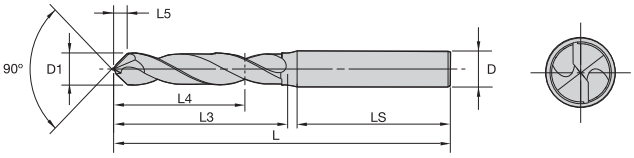
- Combination of point design, substrate, and coating provides longer tool life and requires substantially less cutting force.

KDF400™ Grade

- CVD multilayer diamond coating provides more wear resistance and reduced friction, increasing tool life and improving chip flow.

Customisation

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.



For information on L, L3, and L4 max, see the Solid Carbide foldout table.

FB Drills with Through Coolant for Flat-Bottom Applications

Primary Application

B707_FB Series Solid Carbide Drills are productivity tools that combine two operations in one:

1) Eliminate the 180° end mill in flat-bottom drilling or when preparing an inclined or curved surface for drilling.
2) After full cylindrical engagement, the drill runs at normal solid carbide drilling parameters.

The B707_FBS Series with the new uncoated KN15™ grade now offers the same advantages for drilling in non-ferrous materials, such as aluminium, copper, and brass. The B707_FBL Series is designed for applications in stainless steel and high-temperature alloys.

Features and Benefits

Unique FB Drill-Point Design

- Two effective cutting edges over centre enable high feed rates.
- Creates a true flat-bottom hole from O.D. to centre.
- Four-margin lands improve hole straightness and roundness providing good alignment even in cross holes.

Straight Cutting Edge

- Guarantees a true 180° hole ground.
- Rake angle correction improves chip control.

KC7315™ Grade on B702_FBG and _FBL

- Enables high drill-like penetration rates and superior tool life.

KN15 Grade on B707_FBS

- The uncoated grade prevents built-up edge reducing the risk of fracture.
- The highly polished surfaces ensure superior chip evacuation even when low-pressure coolant or MQL is applied.

Customisation

- Intermediate diameters available as semi-standards.
- Length variations available as semi-standard:
  B706_ 1,5 x D
  B708_ 5 x D
  B709_ 8 x D
- Other length variations and step drills are available as engineered solutions.

The B707_FBG drill eliminates the traditional two-step process to create a flat-bottom hole using a drill and an end mill and can perform the operation 25%–40% faster. It also eliminates the two-step process of using an end mill to pre-machine a flat on the workpiece material for inclined surfaces.

Workpiece Application	B707A..FBG Standard Length	B708/B709A...FBG Custom Long Length
• Tapped hole with lead chamfer larger than FBG diameter.	 No feed reduction.	 50% feed reduction.
• Nominal diameter pilot required.	 Rough or hardened surfaces. No feed reduction.	 Pilot on all surfaces. No feed reduction.
• >6° angled entrances.	 Reduce feed by 30% until full diameter, or use pilot.	 Pilot with short FBG on all surfaces. No feed reduction.
• Angled exits.	 30% feed reduction.	 30% feed reduction.
• Round surfaces.	 Reduce feed by 30% until full diameter, or use pilot.	 Pilot with short FBG on all surfaces. No feed reduction.

HP Beyond™ Step Drills with Through Coolant for Steel and Iron

Primary Application

Most tapped holes require a chamfer. The B731_HP and B732_HP Step Drills offer a one-pass solution in steels and irons in traditional tap sizes to reduce cycle time and increase productivity. An extensive range of step drills are available to cover Kennametal's taps products.

Features and Benefits

HP Drill-Point Design

- Low thrust prevents workpiece flexing.
- Excellent centring capabilities.

Unique Flute Design

- Drastically improved chip evacuation.
- Better hole surface quality.

KCPK15™ Beyond Grade

- The grade is a multilayer, TiAlN-based coating with high hot hardness. High cutting speeds enable usage in MQL applications.
- The highly polished surface ensures superior chip evacuation even when low-pressure coolant is applied.
- Improves average metal removal rate and tool life by 10–20%.

Customisation

- Intermediate diameters available as semi-standards.
- Using Kennametal Slim Line Hydraulic Chucks is recommended if workpiece contours need bypassed.

Visit **http://www.kennametal.com/holemaking/** to browse our electronic catalogue any time you're looking for Kennametal's best tooling solutions. It's fast, free, and always available. The online e-catalogue is updated weekly with products and solutions for milling, turning, drilling, and tooling systems applications.

Kenna Universal™ Drills

Primary Application

Kenna Universal Drills (B96_B97_Series) are engineered to deliver superior performance in steel, cast iron, and stainless steel applications making it ideal for small- and medium-sized shops. The universal application profile reduces tool change times and the number of drills in inventory. Covering a large spectrum of off-the-shelf diameters and a broad range of applications makes Kenna Universal Drills an excellent alternative to other high-performance products.

The new B976Z series is available from 2,383–3mm (.0938-.1181") making it the first standard offering in less than 3mm. This extended diameter offering covers all common tap drill sizes, including an expanded selection of wire, fractional, and letter sizes.

Use as Pilot Drill

- Ideal point angle and tolerance make the Kenna Universal Drill the preferred pilot drill for B27_ Series Solid Carbide Deep-Hole Drills.

Features and Benefits

Kenna Universal Drill-Point Design

- Low thrust. Works well on a variety of machines.
- Excellent centring capabilities.
- Easy to regrind.

Four-Margin Land Design

- Improves hole straightness and roundness.
- Provides good alignment and stability in tough drilling applications — even when drilling through cross holes.

KC7315™ Grade

- A multilayer, TiAlN-based coating with high hot hardness enables 30% higher cutting speeds and constant tool life.
- Surface finish ensures chip evacuation when drilling deep holes.

Customisation

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.

F-Shank

- For standard line items with F-shank, please refer to the e-catalogue on www.kennametal.com.
